## Table of Contents

#### Introduction

The world seeks to agree on a post-2020 international framework that will apply to all countries at the twenty-first session of the Conference of the Parties to the United Nations Framework Convention on Climate Change (COP21) to be held in Paris in December 2015.

In April 2015, before Japan formulated its Intended Nationally Determined Contribution, KEIDANREN announced Phase II of the Commitment to a Low Carbon Society towards 2030, which expands on a series of measures that it has promoted since 1997, namely, the Voluntary Action Plan on the Environment and the Commitment to a Low Carbon Society Phase I. With the first pillar of the program calling for (a) "Emission reductions from domestic business operations," CO2 reduction targets were established for 2030 in addition to conventional 2020 targets. The Commitment to a Low Carbon Society comprises four pillars, the other three being: (b) "Strengthened co-operation with other interested groups" including reductions through products; (c) "Promoting contribution at the international level" including the promotion of technology transfers to developing countries; and (d) the "Development of innovative technologies." As of October 2015, 54 industries and companies have formulated action plans under the Commitment to a Low Carbon Society, incorporating the maximum efforts possible.

The Voluntary Action Plan on the Environment of KEIDANREN made significant accomplishments as a result of running the PDCA cycle every fiscal year and promoting voluntary and proactive efforts on the part of industries and companies since its formulation in 1997 (see Annex "Overview and Accomplishments of the KEIDANREN's Voluntary Action Plan on the Environment"). In particular, 34 industries of the industrial and energy conversion sectors set up the common target of "reducing average CO2 emissions from the industrial and energy conversion sectors between fiscal 2008 and 2012 to below the level of fiscal 1990" and made voluntary reduction efforts, consequently achieving "reductions by 12.1% relative to fiscal 1990 levels" and thereby substantially overachieving the target.

The Government initiated deliberations on its Intended Nationally Determined Contribution (INDC) that would include Japan's greenhouse gas (GHG) reduction target in January this year. During the deliberation process, KEIDANREN explained the efforts undertaken and the accomplishments made under the Voluntary Action Plan on the Environment and declared its continued determination to voluntarily reduce CO2 emission under the Commitment to a Low Carbon Society.

The government finalized its INDC and submitted it to the UN in July this year. The Commitment to a Low Carbon Society of KEIDANREN served as the basis for calculations of measures to be taken in the business community.

Given the increasingly large role that the Commitment to a Low Carbon Society will play

1

in Japanese policy, KEIDANREN must make maximum efforts to reduce CO2 emissions under the Commitment to a Low Carbon Society and continue to seek further enhancement of the program's effectiveness, transparency and reliability.

From this perspective, we have complied the Fiscal 2015 Follow-up Results (Summary) <Performance in 2014>. Details of efforts made by each industry can be found in the "Industry-specific Report" to be published in spring 2016.

1. Overview of the Voluntary Action Plan on the Environment of KEIDANREN (Section on Global Warming Measures) (fiscal 1997-2012)

## 2. Accomplishments of the KEIDANREN Voluntary Action Plan on the Environment (Section on Global Warming Measures)

♦ As a result of efforts made under the Voluntary Action Plan on the Environment, emissions were reduced by 12.1% from fiscal 1990 levels during the first commitment period (2008-2012) of the Kyoto Protocol

(10000t-CO2) CO2 emission reduction trends (34 industries of the industrial and energy conversion sectors)

\*2 The five-year average (fiscal 2008-2012) before consideration of abatement by depreciation of credits is 9.5% below fiscal 1990 levels.

## 3. History of the Voluntary Action Plan on the Environment (Section on Global Warming Measures) and the Commitment to a Low Carbon Society

April 1991	Announced the KEIDANREN Global Environment Charter
June 1992	UN Earth Summit (Rio de Janeiro)
July 1996	Announced the KEIDANREN Appeal on Environment (declared the formulation of the
	Voluntary Action Plan on the Environment)
June 1997	Announced the KEIDANREN Voluntary Action Plan on the Environment
	The industrial and energy conversion sectors set up targets to "endeavor to reduce CO2 emissions from the industrial and energy conversion sectors in 2010 (later changed to average of fiscal 2008-2012) to below fiscal 1990. =>achieved reductions by 12.1% (Fiscal 2013 follow-up results)
Dec. 1997	Adopted the Kyoto Protocol (COP3)
Dec. 1998	First follow-up to the Voluntary Action Plan on the Environment (continued on an annual
	basis)
July 2002	Launched the Evaluation Committee for the Voluntary Action Plan on the Environment
April 2005	Cabinet Decision on the "Kyoto Protocol Target Achievement Plan"
March 2008	Cabinet Decision on the "Kyoto Protocol Target Achievement Plan (revised)" "the voluntary action plans of <i>Nippon KEIDANREN</i> are, in particular, playing a central role in countermeasures in the industrial community. The advantages of a voluntary instrument include the ease of selection of superior countermeasures for each actor based on its originality and ingenuity, the likelihood of providing incentives to pursue aggressive targets, and no procedural costs for both the Government and implementing actors. It is expected that these advantages will be further exploited in voluntary action plans by business operators."
Dec. 2009	Announced the Commitment to a Low Carbon Society Phase I (Basic Concept) (2020 target)
Jan. 2013	Formulated and announced the Commitment to a Low Carbon Society Phase I (2020 target)
	=> as of October 2015, 57 industries and companies have formulated action plans
March 2013	Interim policy on global warming (Global Warming Prevention Headquarters decision) ("In terms of sector-specific measures to cope with CO2 emissions of energy origin, voluntary approaches taken by businesses participating in the Commitment to a Low Carbon Society shall undergo evaluation and verification, and institutional measures, including the formulation, announcement and implementation of guidelines on emission regulation, and various support measures shall be promoted."
April 2013	Launched the KEIDANREN Commitment to a Low Carbon Society
July 2014	Invited industries to formulate action plans under the KEIDANREN Commitment to a Low
	Carbon Society Phase II (2030 target)
April 2015	Formulated and announced the Commitment to a Low Carbon Society Phase II (2030
	target)
July 2015	=> as of October 2015, 54 industries and companies have formulated action plans Decision on Japan's Intended Nationally Determined Contribution by the Japanese Government
	for the bottom-up calculation of the GHG emission reduction target."

#### 1. Pillar 1: Emission reductions from domestic business operations

The Fiscal 2015 Follow-up revealed that CO2 emissions in fiscal 2014 had amounted to 391.10 million t-CO2 [1.3% reduction relative to fiscal 2013 levels] from the industrial sector (total of 31 industries), 82.41 million t-CO2 [7.3% reduction relative to fiscal 2013 levels] from the energy conversion sector (total of 3 industries), 20.92 million t-CO2 [3.0% reduction relative to fiscal 2013 levels] from the commercial sector (total of 12 industries) and 120.50 million t-CO2 (1.6% reduction relative to fiscal 2013 levels) from the transportation sector. Therefore, CO2 emissions had been reduced in all sectors (Figure 1).

An analysis was conducted on contributing factors of increases and decreases in CO2 emissions compared with fiscal 2013 (previous fiscal year) and fiscal 2005 levels (Figures 2 and 3). As a result, it was revealed that the "change in energy consumed per unit of economic activity" (energy consumption intensity) had improved in all sectors with the exception of the industrial sector (2.9% reduction in the energy conversion sector, 1.0% reduction in the commercial sector, 5.1% reduction in the transportation sector). The industrial sector, recording a 0.1% increase, saw little change in its CO2 emissions, presumably due to difficulties in controlling CO2 emissions fixed regardless the changes in economic (production) activity that resulted from the backlash to the last-minute rush of demand prior to the consumption tax increase.

#### Figure 1. CO2 emissions by sector

(Notes) • Data for fiscal 2005 have been collected based on the calculation method employed under the Commitment to a Low Carbon Society for comparison purposes.

- Emissions from the commercial sector in fiscal 2005 are not provided due to unsatisfactory data collection status.
- CO2 emissions after consideration of emission abatement based on the depreciation of credits are provided in brackets.
- Figures provided in square brackets are relative to fiscal 2013 levels.

Figure 2 Factors of emission increase/decrease by sector (relative to fiscal 2013)

Figure 3. Factors of emission increase/decrease by sector (relative to fiscal 2005)

## (1) Industrial Sector

## A. Performance

The Fiscal 2015 Follow-up revealed that the industrial sector emitted 391.10 million t-CO2 in fiscal 2014, representing a decrease of 1.3% (5.29 million t-CO2) compared to fiscal 2013 levels. In comparison with fiscal 2005 levels, emissions from the sector decreased by 6.8% (28.46 million t-CO2) (Figure 4.).

The industrial sector emitted 396.39 million t-CO2 in fiscal 2013, accounting for 83.3% of total emissions from Japan's industrial sector as a whole (476.05 million t-CO2 in fiscal 2013).

As provided in Figure 5, industries reported that in their efforts to reduce CO2 emissions in fiscal 2014, they introduced energy-saving/high-efficiency facilities, recovered waste heat, converted to more efficient fuels and improved operational methods (see Attachment 2 for details).

## Figure 4. CO2 emissions from the industrial sector

- (Notes) The Voluntary Action Plan on the Environment was implemented through fiscal 2012 and succeeded by the Commitment to a Low Carbon Society from fiscal 2013. The figures for fiscal 2005-2012 under the Commitment to a Low Carbon Society have been calculated and provided as reference.
  - Calculation methods have been renewed with the implementation of the Commitment to a Low Carbon Society. Changes include calculating emissions from power generation using a receiving end coefficient instead of a generation-end coefficient and setting revised industrial boundaries in calculating emissions from some industries.
  - The CO2 emission figures for the electrical and electronics industry in fiscal 2011 and the years preceding used for emission calculations under the Commitment to a Low Carbon Society are equivalent to those used in the Voluntary Action Plan on the Environment (as the industry used receiving end coefficients in prior calculations, which did however apply different industrial boundaries). Emissions from the Shipbuilders' Association of Japan are not included in the figures representing fiscal years prior to 2012.
  - CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

## Figure 5. Examples of efforts made in fiscal 2014 [Industrial sector]

## **B.** Factor analysis

A factor analysis was conducted on the causes that led to a 1.3% decrease in CO2 emissions from the industrial sector in fiscal 2014, relative to fiscal 2013. It was found that decreased economic activity and a smaller CO2 emission factor contributed to reducing CO2 emissions by 1.2% and 0.2% respectively (see Table 1). Energy consumption per unit of economic activity was on a level with that of fiscal 2013, increasing by 0.1%, presumably due to having difficulties in controlling fixed CO2 emissions despite reduced economic (production) activity among major industries that had resulted from the backlash to the last-minute rush of demand prior to the consumption tax increase<sup>1</sup>.

In contrast, relative to fiscal 2005 levels, reduced energy consumption per unit of economic activity contributed to reducing CO2 emissions by 4.0%, thus indicating that energy intensity levels have improved over the medium to long-term.

<sup>&</sup>lt;sup>1</sup>In general, energy consumption (CO2 emissions) comprises an inevitable part that is required regardless of economic (production) activity levels (fixed consumption) and a part that changes in conjunction with economic activity levels (variable consumption). Despite reduced economic activity, energy efficiency levels (CO3 emission efficiency) tend to decrease as a whole due to unchanged levels of fixed energy consumption.

Table 1. Analysis of contributing factors to increases and decreases in CO2 emissions from the industrial sector in fiscal 2014<sup>\*1</sup>

	Relative to fiscal	Relative to fiscal
	2013	2005
	-1.2%	-7.3%
Change in economic activity	(-1.1%) *6	(-7.2%)
*3*4	-0.2%	+4.3%
Change in CO2 emission factor	(-0.3%)	(+4.2%)
Change in energy consumed per unit of	+0.1%	-4.0%
*s	(+0.1%)	(-4.0%)
economic activity		
Total	-1.3%	- <b>7.0</b> %*7
10001	(-1.4%)	(-7.0%)

\*1 Due to the rounding of values to two decimal places, totals may differ from the sum of individual items.

\*2 Indices with the closest relation to energy consumption were selected to represent each industry's economic activity in each industry.

\*3 CO2 emissions per unit of heat output have been used for fuel, and CO2 emissions per unit of power output, for electricity.

\*4 Fuel conversion efforts, as provided in Figure 5, have contributed to the lowering of the CO2 emission factor.

\*5 Efforts including the introduction of energy-saving and high-efficiency facilities, recovery of waste energy, and improvement of operational methods, as provided in Figure 5 have contributed to the reduction of energy consumed per unit of economic activity.

\*6 CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

\*7 Data for the Shipbuilders' Association of Japan are not included in the figure provided relative to fiscal 2005.

#### (2) Energy conversion sector

#### A. Performance

The Fiscal 2015 Follow-up revealed that the energy conversion sector emitted 82.41 million t-CO2 in fiscal 2014, representing a decrease of 7.3% (6.47 million t-CO2) compared to fiscal 2013 levels. In comparison with fiscal 2005 levels, emissions from the sector have decreased by 0.3% (0.24 million t-CO2) (Figure 6.).

The energy conversion sector emitted 88.88 million t-CO2 in fiscal 2013, accounting for 88.3% of total emissions from Japan's energy conversion sector (100.64 million t-CO2 in fiscal 2013) as a whole.

As provided in Figure 7, industries reported that in their efforts to reduce CO2 emissions in fiscal 2014, they introduced energy-saving/high-efficiency facilities, recovered waste heat, converted to more efficient fuels and improved operational methods (see Attachment 2 for details).

#### Figure 6. CO2 emissions from the energy conversion sector

- (Notes) The Voluntary Action Plan on the Environment was implemented through fiscal 2012 and succeeded by the Commitment to a Low Carbon Society from fiscal 2013. The figures for fiscal 2005-2012 under the Commitment to a Low Carbon Society have been calculated and provided as reference.
  - Calculation methods have been renewed with the implementation of the Commitment to a Low Carbon Society. Changes include calculating emissions from power generation using a receiving end coefficient instead of a generation-end coefficient and setting revised industrial boundaries in calculating emissions from some industries.
  - The CO2 emission figures for the Federation of Electric Power Companies include emissions from power used in power generation plants and transmission and distribution loss. It should be noted that these emissions are also counted in the emissions from the industrial sector.
  - CO2 emission figures from the Voluntary Action Plan on the Environment (note: industrial boundaries have been revised) have been used to represent the Japan Gas Association in fiscal 2012 and the years preceding under the Commitment to a Low Carbon Society.
  - CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

## **B.** Factor analysis

A factor analysis was conducted on the causes that led to a 7.3% decrease in CO2 emissions from the energy conversion sector in fiscal 2014, relative to fiscal 2013. It was found that smaller economic activity, a smaller CO2 emission factor and reduced energy consumption per unit of economic activity contributed to reducing CO2 emissions by 3.5%, 0.9% and 2.9% respectively

In the energy conversion (electric power) sector, unlike in the industrial sector, despite reduced economic (energy production) activity, improvement was seen in the energy consumption per unit of economic activity. This is presumably due to the increased operating rate of newly installed high-efficiency equipment, in contrast to the reduced operation of aged equipment in response to lower energy demand.

Table 2. Analysis of contributing factors to increases and decreases in CO2 emissions from the energy conversion sector in fiscal 2014<sup>\*1</sup>

	Relative to fiscal	Relative to fiscal
	2013	2005
*2	-3.5%	-7.5%
Change in economic activity <sup>2</sup>	(-3.5%) *7	(-7.5%)
*3*4*5	-0.9%	-1.7%
Change in CO2 emission factor 1914-19	(-0.9%)	(-1.9%)
Change in energy consumed per unit of	-2.9%	+9.0%
senange in chergy consumed per unit of	(-2.9%)	(+9.0%)
economic activity		
Total	-7.3%	-0.3%
Total	(-7.3%)	(-0.4%)

\*1 Due to the rounding of values to two decimal places, totals may differ from the sum of individual items.

\*2 Indices with the closest relation to energy consumption were selected to represent each industry's economic activity in each industry.

\*3 CO2 emissions per unit of heat output have been used for fuel, and CO2 emissions per unit of power output, for electricity.

\*4 Fuel conversion efforts, as provided in Figure 7, have contributed to the lowering of the CO2 emission factor.

\*5 The energy input used the factor analysis include only thermal energy. Therefore, in the factor analysis, increased energy input due attributable to increased thermal power generation in response to the suspension of nuclear power plants are reflected in a smaller CO2 emission factor and increased energy consumed per unit of economic activity.

\*6 Efforts including the introduction of energy-saving and high-efficiency facilities, recovery of waste heat, and improvement of operational methods, as provided in Figure 7 have contributed to the reduction of energy consumed per unit of economic activity.

\*7 CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

## (3) Commercial sector

#### A. Performance

The Fiscal 2015 Follow-up revealed that the commercial sector emitted 20.92 million t-CO2 in fiscal 2014, representing a decrease of 3.0% (0.65 million t-CO2) compared to fiscal 2013 levels (Figure 8.).

The commercial sector emitted 23.99 million t-CO2 in fiscal 2013, accounting for 7.7% of total emissions from Japan's energy conversion sector (278.75 million t-CO2 in fiscal 2013) as a whole.

Industries reported that they continued to newly install or upgrade existing equipment and appliances to high-efficiency/energy-saving models, including LED lighting, highperformance air conditioning equipment and elevators (Figure 9). They are also engaged in further enhancing thermal insulation levels and improving the efficiency of energy management in buildings. (see Attachment 2 for details).

#### Figure 8 CO2 emissions from the commercial sector

- (Notes) The Voluntary Action Plan on the Environment was implemented through fiscal 2012 and succeeded by the Commitment to a Low Carbon Society from fiscal 2013. The figures for fiscal 2010-2012 under the Commitment to a Low Carbon Society have been calculated and provided as reference.
  - Calculation methods have been renewed with the implementation of the Commitment to a Low Carbon Society. Changes include calculating emissions from power generation using a receiving end coefficient instead of a generation-end coefficient and setting revised industrial boundaries in calculating emissions from some industries.
  - Data for the Real Estate Companies Association of Japan are not included in the graph.
  - CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

## Figure 9. Examples of efforts made in fiscal 2014 [Commercial sector]

- (1) Introduction of energy-saving and high-efficiency facilities
- Upgrading of equipment (air conditioners, elevators) to high-efficiency models
- Improvement of efficiency levels of transformers, compressors, pumps (upgrading to high-efficiency models, etc.)
- Installation of inverters in equipment, introduction of no-load inverters
- Application of thermal insulation coating and highinsulation window panes
- Switching to high-efficiency lighting (renewal to LEDs or fluorescent bulbs)
- Construction of or moving to highly efficient buildings
- Introducing automated-control of heat sources and intake of outdoor air
- Introduction of energy management systems
- Connecting servers and routers to DC power sources
- Installation of HVAC systems without air conditioning systems at base stations.
- Introduction of heat pumps
- Conversion to small fuel-efficient vehicles

- (2) Fuel conversion
- Utilization of solar power and wind power
- (3) Improvement of operational methods
- Optimization of freezer temperatures
- Suspension of overdue equipment
- Streamlining of networks
- Intermittent operation of air conditioners and appliances (lighting, office appliances, commercial equipment, elevators, toilets, etc.)
- Optimization of air conditioning temperatures strict maintenance
- Optimization of brightness
- Integration of offices

#### (4) Other

- Promotion of energy-saving efforts through the acquisition of ISO14001 certification
- Management of working hours
- Greening of factory roofs and walls

## **B.** Factor analysis

A factor analysis was conducted on the causes that led to a 3.0% decrease in CO2 emissions from the commercial sector in fiscal 2014, relative to fiscal 2013. It was found that increased economic activity in telecommunications and other industries, a smaller CO2 emission factor and reduced energy consumption per unit of economic activity contributed to reducing CO2 emissions by 0.6%, 2.6% and 1.0% respectively.

Table 3. Analysis of contributing factors to increases and decreases in CO2 emissions from the commercial sector in fiscal 2014<sup>\*1</sup>

	Relative to fiscal 2013
Change in economic activity * 2	+0.6% (+0.6%) *6
Change in CO2 emission factor *3*4	-2.6% (-2.6%)
Change in energy consumed per unit of economic activity <sup>*5</sup>	-1.0% (-1.0%)
Total	-3.0% (-3.2%)

\*1 Due to the rounding of values to two decimal places, totals may differ from the sum of individual items.

<sup>\*2</sup> Indices with the closest relation to energy consumption were selected to represent each industry's economic

activity in each industry.

- \*3 CO2 emissions per unit of heat output have been used for fuel, and CO2 emissions per unit of power output, for electricity.
- \*4 Fuel conversion efforts, as provided in Figure 9, have contributed to the lowering of the CO2 emission factor.
- \*5 Efforts including the introduction of energy-saving and high-efficiency facilities, recovery of waste heat, and improvement of operational methods, as provided in Figure 9 have contributed to the reduction of energy consumed per unit of economic activity.
- \*6 CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.

#### C. Relevant efforts made in main and local offices by non-commercial industries

Energy-saving efforts pursued in offices are not limited to industries in the commercial sector. A diversity of efforts, including strictly managing heating and cooling temperatures, conserving electric power by frequently switching off lights, and installing high-efficiency energy-saving facilities, have been made across a wide range of industries in the industrial, energy conversion and transportation industries, as provided in Attachment 2. As exhibited in Attachment 7, these efforts have led to the reduction of CO2 emissions per unit of floor area compared to fiscal 2013 levels in many industries.

#### (4) Transportation Sector

#### A. Performance

The Fiscal 2015 Follow-up revealed that the transportation sector emitted 120.50 million t-CO2 in fiscal 2014, representing a decrease of 1.6% (2.01 million t-CO2) compared to fiscal 2013 levels. In comparison with fiscal 2005 levels, emissions from the sector have decreased by 14.5% (17.14 million t-CO2) (Figure 10.).

The transportation sector accounted for 25.5% of total emissions from Japan's transportation sector as a whole (224.66 million t-CO2 in fiscal 2013), excluding overseas emissions.

Industries reported that they continued to newly install or upgrade existing equipment (vehicles, ships, aircrafts, etc.) to high energy-saving performance models and engaged as shown in Figure 11, in efforts to pursue increased transportation efficiency by developing larger equipment and promoting integrated shipping, combining road, rail, marine and air transport (see Attachment 2 for details).

#### Figure 10. CO2 emissions from the transportation sector

- (Notes) The Voluntary Action Plan on the Environment was implemented through fiscal 2012 and succeeded by the Commitment to a Low Carbon Society from fiscal 2013. The figures for fiscal 2005-2012 under the Commitment to a Low Carbon Society have been provided as reference. (Figures for 2005 do not include data for the Association of Japanese Private Railways.) The large differences in emissions under the Voluntary Action Plan on the Environment and the Commitment to a Low Carbon Society for fiscal 2010-2012 are attributable to the increase in the number of companies reporting their emissions.
  - Calculation methods have been renewed with the implementation of the Commitment to a Low Carbon Society. Changes include calculating emissions from power generation using a receiving end coefficient instead of a generation-end coefficient and setting revised industrial boundaries in calculating emissions from some industries.
  - CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.
  - Overseas emissions are included for the Japanese Shipowners' Association and a part of the Scheduled Airlines Association of Japan

## **B.** Factor analysis

A factor analysis was conducted on the causes that led to a 1.6% decrease in CO2 emissions from the energy conversion sector in fiscal 2014, relative to fiscal 2013 (Table 4). It was found that increased economic activity, such as surface and air transport, a smaller CO2 emission factor and reduced energy consumption per unit of economic activity contributed to reducing CO2 emissions by 3.5%, 1.0% and 5.1% respectively.

Table 4. Analysis of contributing factors to increases and decreases in CO2 emissions from the transportation sector in fiscal 2014  $^{*1}$ 

	Relative to fiscal	Relative to fiscal
	2013	2013
	+3.5%	+11.7%
Change in economic activity 2	(+3.5%)*5	(+11.7%)
*3	-0.1%	+2.0%
Change in CO2 emission factor	(-0.1%)	(+2.0%)
Change in energy consumed per unit of	-5.1%	-28.1%
enange in energy consumed per unit of	(-5.1%)	(-28.1%)
economic activity		
Total	-1.6%	-14.5%*6
Total	(-1.6%)	(-14.5%)

\*1 Due to the rounding of values to two decimal places, totals may differ from the sum of individual items.

\*2 Indices with the closest relation to energy consumption were selected to represent each industry's economic activity in each industry.

\*3 CO2 emissions per unit of heat output have been used for fuel, and CO2 emissions per unit of power output, for electricity.

- \*4 Efforts including the introduction of energy-saving and high-efficiency facilities, recovery of waste heat, and improvement of operational methods, as provided in Figure 11, have contributed to the reduction of energy consumed per unit of economic activity.
- \*5 CO2 emissions after consideration of reduced emissions resulting from the use of post-adjustment emission coefficients stipulated in the Act on the Promotion of Global Warming Countermeasures are provided in brackets.
   \*6 Comparisons with fiscal 2005 performance do not include data for the Association of Japanese Private Railways.

#### C. Relevant logistics-related efforts made in non-transportation industries

Energy efficiency improvement measures pursued to reduce emissions from the logistics sector are not limited to industries of the transportation sector. As presented in Attachment 2, a wide range of industries in the industrial, energy conversion and commercial sectors are engaged in various efforts. Improvement measures for individual vehicles include applying Japan's world-leading energy efficiency technologies to achieve even higher fuel efficiency. Furthermore, industries are consolidating distribution bases and using third-party logistics (3PL) providers to improve the efficiency of distribution practices and converting to low-emission vehicles. (Outcomes can be found in Attachment 8.) These efforts will be continued in the future.

## 2. Pillar 2: Strengthened co-operation with other interested groups

## (1) Contribution through low-carbon products and services

Companies have contributed to reducing CO2 emissions through their untiring efforts not only to reduce emissions from the manufacturing and production processes of their products but also to provide low-carbon products and services. Examples of their contribution to CO2 emission reductions through products and services are provided in Table 5 and Attachment 3. Some industries have ensured the credibility and transparency of their calculated contributions by referring to environmental guidelines adopted by industrial groups as well as publicly known standards.

Products	Description	CO2 emission reduction effect			
	Outcome of summing and evaluating the efforts made regarding target product categories (lighting equipment, client computers and the 19 product categories under the new methodology for fiscal 2015) by participating companies of the electrical and electronic meduat inductor (a Compitment to a		Avoided emissions [10,000 t-CO2]

High- efficiency oil- fired water	<basis calculations="" of=""> Number of units in use: 249,000 units (end of fiscal 2014)</basis>	Fiscal 2014: appro (249,000 units×19	ximately 49 7kgCO2/ye	9,000 t-CO2 ar÷1000=49,000 tCO2/year)	

Table 5. Products and services contributing to CO2 emission reductions

heaters (Eco Feel)	CO2 emissions avoided per unit: 197kgCO2/year (representative figure for a family of four)	*heat efficiency improved	by recovering latent heat from waste heat	
Natural gas shift in industrial heat demand		Fiscal 2014: approximately 180,000 t-CO2 (Newly installed: 142 million m3 in boilers / 103 million m3 in industrial furnaces)		
Gas air conditio	ning systems	Fiscal 2014: approximately 40,000 t-CO2 (installed capacity: 180,000 RT)		
Natural gas vehi	icles	Fiscal 2014: approximately 10	),000 t-CO2 (installed units: 1,075 units)	
Inhalation aerosols	Shifted from metered dose inhalation aerosols to non-fluorocarbon- based dry powder	Fiscal 2014: 1.413 million tC	O2 (CO2 equivalent)	
Multi-layered glass	Reduced heating and cooling costs by approximately 40% by replacing single-layered glass with multi- layered glass, thereby improving heat insulation properties.	Fiscal 2014: reduction effect of 241,000 t-CO2/year (estimated diffusion rate of multi-layered glass (in terms of glass coverage) in new housing is: 96.7% in stand-alone housing units and 72.2% in collective housing units )		
Concrete pavement	Improved fuel efficiency by changing asphalt pavement to concrete pavement, and thus reducing the rolling resistance of heavy-duty vehicle	CO2 emission reductions: $1.14 \sim 6.56$ kg (Load capacity: $11t,100$ km running distance) (Fuel consumed when running the same distance: $95.4 \sim 99.2\%$ )		
	Reduction of CO2 emissions at end-use by conserving water, etc.	Category	CO2 emission reductions (relative to conventional products)	
		Energy-saving toilet seats	6.7 kg-CO2/year	
		Warm water flushing toilet seat	127kg-CO2/year	
Sanitary equipment		Prefabricated bath for stand-alone housing	55/167/125 kg-CO2/year (heat retaining bath tubs / hot water savings/ push plate-type faucets)	
		Fitted kitchen units	2/121/88 kg-CO2/year (LED lighting/hands-free faucets/Eco Single)	
		Washbasins	19/3 kg-CO2/year (Eco-handle faucets/fog-free mirror)	
		Showers	132 kg-CO2 (Air in Shower: for a family of four)	

Also, relevant industries have joined hands beyond industrial boundaries to reduce society-wide CO2 emissions by providing high-quality products and services.

For example, as exhibited in Figure 12, in the transportation sector, a number of industries have been in engaged in a concerted effort to reduce CO2 emissions by 1) improving the actual fuel efficiency of passenger vehicles; 2) improving the actual fuel efficiency of cargo vehicles; and 3) improving cargo shipping efficiency.

Furthermore, as presented in Figure 13, in the commercial and residential sector, improvements in the energy-saving performance of buildings, the introduction of energy management systems, and the development and diffusion of high-efficiency energy-saving equipment have contributed to reducing CO2 emissions.

#### Conceptual drawing of a smart house

#### (2) Efforts leading to public campaigns

It is also essential that each individual reexamine his/her attitudes and actions towards global warming issues, and adapt his/her lifestyles accordingly with a view to resolving them. To this end, public-private cooperation in promoting public campaigns is called for (Figure 14).

As provided in Attachment 3, according to the Fiscal 2015 Follow-up results, public relations campaigns and educational activities (hosting events and expositions, environmental education outreach to students and local residents, etc.) as well as the communication of energy-saving information (by using websites, distributing pamphlets, providing product performance information at retail stores, etc.) were implemented so that increased public awareness and knowledge of global warming prevention would encourage the proactive use of energy-efficient low-carbon products and services, etc. Furthermore, the business community was engaged in continued efforts to implement a wide range of activities, including adopting casual dress codes (Cool Biz / Warm Biz), strictly controlling air conditioning and lighting, encouraging the keeping of environmental household account books, and promoting eco-commuting and refrainment from idling, in order to engage employees and their families in activities to prevent global warming on a daily basis.

Figure 14. CO2 emissions from energy consumption in Japan, by sector (fiscal 1990 = 100)

Source: compiled from National Institute of Environmental Studies (NIES) "The GHGs Emissions Data of Japan"

## (3) Other

#### A. 3Rs and global warming countermeasures

The 3Rs (reduce, reuse, and recycle) pursued in order to create a recycle-based society can also contribute to countering global warming. In the Fiscal 2015 Follow-up, some industries reported that they had reduced the energy used for transportation by reducing waste volume and developing lightweight thin-walled containers, and others reported that they had reduced CO2 emissions by utilizing waste and byproducts.

In contrast, pursuing the 3Rs can sometimes lead to increased CO2 emissions. For example, the cement industry receives waste and byproducts, including sewerage sludge, from other industries, and thus contributes to the nationwide reduction of waste volumes requiring final disposal. However, utilizing waste involves energy-consuming preliminary treatment, and consequently increases CO2 emissions. It should be noted that as such cases imply, focusing only on reducing CO2 emissions and neglecting the 3Rs would increase the total volume of waste requiring final disposal across Japan.

## B. Fostering and conserving forest sinks

Global warming countermeasures also call for the fostering and conservation of forest sinks. In the Fiscal 2015 Follow-up, some industries reported that they had enhanced the utilization of domestic lumber, including tree thinning. Other industries reported that they had engaged in management operations in company-owned forests and the greening of factories and business locations, or that they had promoted afforestation projects in Japan and overseas.

## 3. Pillar 3: Promoting contribution at the international level

#### (1) International comparison of energy efficiency

Under the Voluntary Action Plan on the Environment (Section on Global Warming Measures) and the Commitment to a Low Carbon Society, Japan's business community has endeavored to improve energy-saving technologies and energy efficiency. As a result, major industries have achieved world-leading energy efficiency levels, which continue to be maintained (Figure 15). Furthermore, oil refineries have been newly added this year to the list of technologies reaching the world's highest levels.

#### Figure 15. International comparisons of energy efficiency

Energy required to generate 1kWh of electricity through thermal Power generation (2012)

Energy required to produce 1 ton of iron (2010)

Energy required to produce 1 ton of electrolytic caustic soda (2009)

Energy-saving potential of adopting BAT in the pulp and paper industry (GJ/T)

Estimates of the energy intensity of heat required in clinker production

Comparison of energy consumption indices at oil refineries (2012)

## (2) International contribution through products, equipment and technology transfer

Having achieved world-leading energy efficiency levels, Japan's business community has fostered advanced energy-saving and low-carbon technologies. It also embraces products and technologies with high energy-saving and energy efficiency performance.

However, Japan accounts for only 2.8% of the world's greenhouse gas emissions (2010). It is essential that Japan contribute to the establishment of a low carbon society through the development and diffusion of such highly energy-efficient and energy-saving low-carbon technologies and products.

In the Fiscal 2015 Follow-up, industries reported international contributions to reduce CO2 emissions, as provided in Table 6

In addition, as presented in Attachment 4, many industries reported various efforts (moving manufacturing processes overseas, exporting products, fostering human resources in developing countries, etc.) to disseminate Japan's advanced energy-efficient low-carbon technologies and products overseas.

Industries have also engaged in activities at international conferences (cooperating towards the formulation of international standards, introducing Japan's diverse global warming measures, etc.) and have contributed to the implementation of anti-pollution measures, such as those against air pollution and water contamination.

Products, equipment, technology transfers, etc.	Description	CO2 emission reductions				
	The result of summing and evaluating the efforts made by companies participating in the electrical and electronic products industry's Commitment to a Low Carbon Society	Category	Avoided emissions [10,000 t-CO2]

 Examples of international contributions made in fiscal 2014

Exporting major energy-saving equipment (CDQ, TRT, byproduct gas-fired GTCC, OG gas recovery equipment, OG sensible heat recovery equipment, sintering plant waste heat recovery equipment)	Fiscal 2014: 53.40 million t-CO2		
Supplying hydropower systems (Peru)	Fiscal 2014 CO2 emission reductions Huanllaca hydroelectric power plant: approx. 14,000 t-CO2/year (approx. 29,000 MWh) Pallca hydro electric power plant: approx. 46t-CO2/year (approx. 93MW, to initiate operations in Feb. 2015)		
Power generation using surplus steam from waste heat	Fiscal 2014		
boilers at waste treatment plants (Thailand)	CO2 emission reductions: approx. 3,100 t-CO2/year		
	(generation capacity:1,600kW)		

## 4. Pillar 4: Development of innovative technologies

To promote measures in the above three pillars in the medium- to long-term, it is essential that participating industries develop innovative technologies. According to the results of the Fiscal 2015 Follow-up, industries have been engaged in efforts to develop innovative technologies and to work on practical application, as presented in Table 7 (see Attachment 5 for details).

r	
Industry	Achievements in fiscal 2014 (examples)
Japan Iron and Steel	• Completed basic plans for the construction of a 10m3 trial blast furnace under the CO2
Federation	Ultimate Reduction in Steelmaking Process by Innovative Technology for Cool Earth 50
	(COURSE50), sponsored by NEDO. Construction to be completed in fiscal 2015.
Japan Chemical	As a result of the fundamental development of ordered-nanoporous membranes for highly-
Industry Association	refined separation technology, developed an inorganic separation membrane that will save
	energy by 50% in the distillation process. Pilot tests are currently being performed at actual
	plants.
	• Developed fullerene, a nanocarbon material for use in next-generation photovoltaic power
	generation (OPV: organic photovoltaics).
	<ul> <li>Completed joint pilot studies to manufacture hydrogen from sewerage sludge.</li> </ul>
	<ul> <li>Established manufacturing technologies to recycle carbon fiber.</li> </ul>
	Established technologies for mass production of produce silicon carbide (SiC) epitaxial wafers
	with a diameter of six inches; developed photosensitive heat-resistant resist for use in
	transistor manufacturing processes
Japan Paper	Successfully manufactured the first transparent continuous sheet of cellulose nano fiber
Association	(CNF) as a result of joint research between a member company and a diversified chemical
	company. Widely promoted CNF development, including the starting of operations at a pilot
	CNF manufacturing facility and the promotion of developing of new applications, including
	thickeners and packaging at one company; and the provision of samples of various CNF
	initiated by another company.
Japan Automobile	• Trends to expand production lines employing Wet on Wet coating and "hot-metal" processes
Manufacturers	• Newly released 32 next-generation models (EV, PHEV, HEV, FCEV), including minor model
Association / Japan	changes in fiscal 2014
Auto- Body	
Industries	
Association	
Japan Soft Drink	• Shifted heat sources from "steam" to "methods using electrical heating. (actual performance:
Association	33% reduction in CO2 emissions)
	• Introduced a system utilizing the natural "cold heat" of LNG, following fuel conversion
	(projected reductions: 100t of CO2 emissions due to reduced electric power consumption in
	the cooling tower)
Japan Association of	Major private railway companies in the Kanto area renewing rolling stock adopted VVVF
Rolling Stock	inverter devices with full SiC (Silicon Carbide) suitable for use in a DC1500V electrification
Industries	system, therefore succeeding in the world's first practical application of an inverter for rolling
	stock employing a large-capacity 3.3kV power module rated at 1500A using only SiC.

 Table 7. Examples of innovative technology developments in fiscal 2014

Japan Gas	Developed a compact and low-cost hydrogen generation unit with world-leading high	
Association	efficiency to supply large amounts of hydrogen at hydrogen stations	
	Developed gas-engine cogeneration systems to efficiently recover heated waste water from	
	gas engines as steam.	
Telecommunications	• Realized the word's first over-100-bit optical random access memory (RAM) by integrating	
<b>Carriers</b> Association	ultra-small optical memories based on photonic crystal nanocavities. This technology gives	
	hope for the development of high-speed ICT and low energy consumption technologies.	
	Developed a high-voltage direct current (HVDC) electric power-feeding system and compiled	
	and published "Technical Requirements for High-voltage DC Power Feeding Interfaces of ICT	
	equipment (TR)."	

## 5. Efforts made beyond the four pillars

In the Fiscal 2015 Follow-up, industries reported efforts made beyond the four pillars: (1) reducing non-CO2 GHG emissions; and (2) the status of their efforts under the Commitment to a Low Carbon Society Phase II. An outline of these efforts is provided below (see Attachment 6 for details).

## (1) Reducing the emission of non-CO2 greenhouse gases

Greenhouse gases include not only CO2 but also methane (CH4), dinitrogen monoxide (N2O), sulfur hexafluoride (SF6) and fluorocarbons (HFCs and PFCs)<sup>2</sup>, the emissions of which must be controlled in order to cope with global warming. In the Fiscal 2015 Follow-up, industries reported emission reductions of fluorocarbons through the revision of work processes, the enhancement of daily inspections, and the scheduled renewal of facilities. Other efforts, including preventing fluorocarbon leakages, thoroughly recovering and destroying fluorocarbons and considering the use of natural refrigerants, were also reported.

## (2) Status of efforts under the Commitment to a Low Carbon Society Phase II

Seeking to further contribute to global warming countermeasures, in April 2015, KEIDANREN formulated and announced the Commitment to a Low Carbon Society Phase II embracing targets for 2030. At present, 54 industries and companies have set up targets for 2030 regarding emissions from domestic business operations, in addition to existing targets for 2020, and will enhance their efforts in strengthened cooperation with other interested groups, promoting contribution at the international level and developing innovative technologies.

With the perspective that 2030 targets for domestic business activities, involve longterm efforts, the assumptions supporting the targets shall be made explicit to ensure transparency, and various factors, including social and industrial structural change and technological advancements, shall be considered.

<sup>&</sup>lt;sup>2</sup> Approximately 6.9% of greenhouse gas emissions in Japan are attributable to non-CO2 gases (fiscal 2013).
#### **Conclusion**

At COP21 to be held in Paris, countries seek to adopt a post-2020 international framework for climate change. It is essential that all major emitters participate in the new framework, which must be a fair and effective international framework that can also accommodate economic growth. At the negotiation table, the Japanese government should contribute to international negotiations in a way that all countries can reach agreement, while pursuing its own national interests.

Once a new framework is agreed upon at COP21, deliberation on domestic measures will begin in earnest. Regulatory approaches, including cap and trade schemes, the Tax for Climate Change Mitigation, and feed-in-tariff schemes for renewable energy should not be introduced, as they not only significantly affect national livelihood and corporate activities, they are extremely problematic from the perspective of implementing effective global warming countermeasures. Policy measures that have already been introduced should be fundamentally reviewed, with a view to their abolishment. It is critical that measures taken by the business community are explicitly centered on the Commitment to a Low Carbon Society of KEIDANREN and we will continue to request that the Government support the efforts taken by the business community under this program.

In order for the Commitment to a Low Carbon Society to gain more trust among the general public and in society, it is indispensable to ensure its effectiveness, transparency and credibility. Therefore, KEIDANREN will continue to collaborate with participating industries and pursue the PDCA cycle to soundly implement the Commitment to a Low Carbon Society. This will involve evaluation by the Evaluation Committee and addressing the comments made by the Committee.

In fiscal 2016, KEIDANREN will conduct an extensive interim review based on the achievements made from fiscal 2013 to 2015. We will also communicate in a comprehensive manner to both domestic and overseas audiences our contributions to global warming measures, including our efforts in strengthened cooperation with other interested groups, promoting contribution at the international level and developing innovative technologies.

## Industry-specific trends in each sector

\*1 Total CO2 emissions and enrgy consumption have been calculated using the receiving-end coefficient for the average of all power sources as the carbon emission factor and energy conversion coefficient, respectively. Figures for the Japan Rubber Manufacturers Association have been calculated using the c oefficient forthermal power generation and a fixity coefficent for fiscal 2005 (base year) has been used to calculate actual emissions. The difference between a simple sum including relevant industries and the total is provided as "revisions".

\*2 Due to revisions in energy-specific standard calorific values and carbon emission factors under the General Energy Statistics, calculations before fiscal 1999, fiscal 2000-2004, fiscal 2005-2012 and fiscal 2013 are based on different thermal conversion factors

\*3 Intensity indices have been calculated by having each industry set a base year, the figure for which is used as the denomi nator. Unless otherwise specified, the base year is fiscal 1990.

\*4 The Liaison Group of Japanese Electrical and Electronics Industries for Global Warming Prevention has implemented the Comm itment to Low Carbon Society as a new scheme independent of the conventional Voluntary Action Plan on the Environment. Therefore, data for participating industries under the Commitment to a Low Carbon Society are available for only the years following the base year (fiscal 2012). The figures provided for fiscal 1990-2011 have been derived from the Voluntary Action Plan on the Environment as reference. \*5 Emissions from industrial processes refer to CO2 emissions from manufacturing processes that are not energy -oriented.

<efforts 2014="" fiscal="" in="" made=""></efforts>		<efforts 2014="" fiscal="" in="" made=""></efforts>

	(1) Enhanced management
	(2) Installed high-efficiency appliances
	(3) Improved production processes or product quality
	(4) Improved control methods (rotation speed control, etc.)
	(5) Prevented loss (heat ventilation, hydration)
Japan Federation of	<past 2014="" and="" efforts="" fiscal="" in="" made=""></past>
Construction	(1) Reduced surplus soil volumes and shortened conveyance distance
Contractors	(2) Promoted no idling and high fuel efficiency driving methods
	(3) Encouraged the proper maintenance of heavy machinery and vehicles
	(4) Promoted the adoption of high-performance energy-saving construction methods,
	construction machines and vehicles
	(5) Promoted the use of high-efficiency makeshift lighting appliances, etc.
	(6) Promoted energy-saving activities at local offices, etc.
	<3Rs and global warming>
	• Reduced and segregated waste generated in new construction projects (used precast
	concrete, reduced the generation of waste material by adopting alternative formwork,
	unitization of material)
	• Implemented measures to address construction surplus soil issues (proposed ways to
	reduce generation at the construction planning stage, considered the promotion of reuse
	at the construction site or in other construction projects promoted the management and
	utilization of stock)
	<pre><efforts energy="" renewable="" to="" utilize=""></efforts></pre>
	• Installed solar papels on the roofs of business locations and supplied the electric power
	used in offices
	Introduced renewable energy including solar wind kitchen waste biogas nower
	generation at construction sites
	Ised the abovementioned electric nower generated in streetlights and sound meters
	around construction sites
	Purchased green power for utilization in construction work
	Used biodiscel fuels in beauty machinery vehicles and newer generators. Collaborated
	with local communities to collect waste cooking ail
	with local communities to collect waste cooking oil.
	<a and="" comparison="" environmental="" international="" management="" of="" other="" standards=""></a>
	• Approximately 90 percent of 140 member companies have acquired isO14001
	Certification.
	• Had the construction industry represented on the Subcommittee for Environmental
	Management Systems on ISO14001 revisions under the Japanese Standards Association.
	• Explained and communicated the revisions made in ISO14001 to member companies.
Japan Automobile	<past efforts=""></past>
Manufacturers	(1) Equipment
Association / Japan	A. Energy supply-side measures
Auto-Body Industries	Introduced cogeneration equipment and improved efficiency levels
Association	<ul> <li>Introduced high-efficiency compressors, reduced steam air feed pressure, etc.</li> </ul>
	<ul> <li>Addressed radiant heat loss in steam pipes</li> </ul>
	<ul> <li>Introduced and renewed to high-efficiency electric substation equipment</li> </ul>
	B. Measures for energy-intensive equipment
	<ul> <li>Developed steamless or airless processes, reduced air leaks, shortened the time</li> </ul>
	required for air blow, introduced inverter-controlled ventilation and cooling fans
	• Optimized the efficiency of welding ovens and drying ovens; recovered waste heat, etc.
	<ul> <li>Saved energy in lighting equipment, etc.</li> </ul>
	<ul> <li>Renewed freezers for air conditioning and installed heat pumps in air conditioning</li> </ul>
	equipment, etc.
	<ul> <li>Improved processes, implemented electric power saving measures (applied high heat-</li> </ul>
	insulation heat-resistant material, suspended the use of furnaces, etc.), etc.
	(2) Measures to improve productivity
	A. High-performance operation and management technologies, including energy supply
	methods
	<ul> <li>Improved operations (efficient operations, etc.) (reduced energy (electric power, air)</li> </ul>

	consumption when not in operation, consolidation of air conditioning equipment and
	freezers. etc.)
	• Increased energy savings from the furnace body of paint booths
	Reduced the air supply pressure of air and steam, changed the compressor control and
	roviewed nining
	P. Consolidated production lines
	B. Consolidated production lines
	• Consolidated and integrated equipment and production lines and consolidated heat
	processing ovens and casting lines, etc.
	Reviewed the painting process (no paint, shorter processes, changes in air conditioning
	controls, etc.)
	(3) Fuel conversion, ESCO projects
	A. Fuel conversion measures
	<ul> <li>Heavy oil heaters: converted from heavy oil to city gas</li> </ul>
	<ul> <li>Ladle heater in aluminum casting: converted from city gas to electric power (far-</li> </ul>
	infrared heater)
	B. Other
	Replaced factory lighting with LED
	(4) Offices, etc.
	A Operation improvements
	Reduced air leaks, steam leaks, water leaks and radian heat loss to save energy: made
	technological and operational improvements to save energy, etc.
	R Equipment improvements
	b. Equipment improvements
	sented
	(5) Energy savings through collaboration across the supply chain, etc.
	Promoted further CO2 emission reduction efforts by sharing information on good
	energy-saving practices and technologies among manufactures of the final product,
	cooperative auto-body parts manufactures, and other companies along the supply
	chain
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Improved energy supply-side and demand-side equipment
	(2) Improved operations and management
	(3) Consolidated production lines
	(4) Fuel conversion
	(5) Offices and others
Japan Auto Parts	<past efforts=""></past>
Industries Association	(1) Improved driving methods, including stopping idling
	(2) Improved the efficiency of equipment and appliances
	(3) Streamlined processes
	(4) Recovered waste energy through cogeneration, etc.
	(5) Mutually introduced energy-saving technologies and exchanged information on energy
	use
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Saved energy by reusing exhaust from paint booths
	(2) Controlled the end pressure of factor air blows
	(3) Suspended air conditioner use during the wintertime utilizing compressor waste heat
	(4) Introduced high-luminance light storage guiding lights
	(5) Reduced the use of air by utilizing pulse blow
	(6) Reduced the use of an of administrating participation from the heating furnace by installing thermal insulators
	(7) Recovered and utilized hoiler drain steam
	(8) Renewed vending machines to energy-saying models
Janan Enderation of	<pre>concrete vertaing machines to energy saving models</pre>
Housing Organizations	(1) Planning and decigning
	(1) ridining did designing
	Increased housing performances including symplotic nousing
	<ul> <li>improved nousing performance, including retrofitting to meet quake-resistance</li> </ul>
	standards and to save energy
1	<ul> <li>Promoted the adoption of high-efficiency equipment and appliances and renewable</li> </ul>

	energy
	Created good quality built environments by promoting and disseminating high-insulation
	and highly airtight housing and by developing and disseminating "net zero energy
	houses" and "life-cycle carbon minus housing"
	Promoted longer lives for housing
	(2) Construction: adopted construction methods that accommodate both higher
	productivity of housing and environmental considerations
	• Reduced construction on site and reduced waste by using precut panels and promoting
	industrialization
	Enhanced process management and improved the efficiency of transporting construction
	material and reduced the number of deliveries
	Promoted the rouse and recycling of construction waster promoted the use of recycled
	material
	Encured that delivery vehicles travelling to and from plants and construction sites
	refrained from idling
	retrained from idling
	Ensured the segregation of demolition debris
	Promoted the recycling of construction waste
	<efforts 2014="" in="" made=""></efforts>
	Revision and publication of "Guidelines for Environmental Consideration for Housing"
Japan Mining Industry	<past efforts=""></past>
Association	(1) Retrofitted, renewed or upgraded the efficiency of various equipment at each refining
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Equipment
	<ul> <li>Upgraded boilers, blowers, fans and pumps to high-efficiency equipment</li> </ul>
	Introduction of LED lighting
	Introduced inverter-controlled electronic equipment
	(2) Processes
	Recovered and used waste heat
	Optimization of production conditions and revision production processes
	(3) Other (copper, zinc, lead refining processes)
	Optimization of motor control methods
	• Introduced inverter-controlled exhaust gas fans
	Ungraded to high-efficiency sea water pumps
	Ungraded to high-efficiency air conditioning equipment
	Mixed combustion of hiomass
	<3Rs and global warming countermeasures>
	Promoted recycling including recovering various valuable and precious metals, with a
	view to achieving zero emission
	<pre>// Content of a content of</pre>
	Dremeted the construction of solar newer generation systems and constructed water
	romoted the construction of solar power generation systems and constructed water
	power generation racinties. Supplied local electric power companies with steam and sold
	power. Engaged in new development projects.
	CACquisition of environment management and other international standards?
	• Many member companies have entrusiastically acquired ISO14000, an international
	standard.
Lime Manufacture	<pre><past 2014="" and="" efforts="" fiscal="" in=""></past></pre>
Association	(1) Introduced energy-saving and high-efficiency equipment
	(2) Recovered waste heat
	(3) Fuel conversion
	(4) Improved operations
The Japan Rubber	<past efforts=""></past>
Manufactures	(1) New or additional installation of cogeneration systems
Association	Newly or additionally installed high-efficiency cogeneration systems using city gas, etc.
	Converted cogeneration fuels from heavy oil to LNG
	(2) Introduced high-efficiency appliances
	• Installed high-efficiency and inverter-controlled appliances, including fans, motors,
	lighting

	(3) Implemented conventional energy-saving practices
	Applied heat retention and thermal insulation, prevented leakages and recovered heat
	in thermal equipment
	• Improved the efficiency of operations through rotation speed control, intermittent
	operation and downsizing of equipment
	(4) Improved the efficiency through energy conversion and revisions in the production
	process
	<ul> <li>Improved processes by introducing waste oil furnaces and converting the fuels used in furnaces and boiler to gas</li> </ul>
	Streamlined production by consolidating production processes and equipment by
	reviewing operations covered by numerous business locations
	(5) Improved the efficiency of air conditioning systems
	• Introduced ice thermal storage, absorption-type freezer, heat numps
	(6) Improved product durability
	• Achieved significant improvements in product durability by converting from bias tires to
	radial tires
	Developed other high-durability rubber materials
	(7) Technological development and promotion
	• Developed high fuel efficiency tires with reduced rolling resistance based on LCA:
	promoted sales and dissemination
	Developed and disseminated run flat tires
	Promoted efforts related to retread tires
	(8) Introduced a tire labeling program
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Converted fuel in cogeneration and production processes
	• Converted fuels used in cogeneration and in the production process (boilers, etc.) from
	heavy oil to LNG. Introduced steam and waste heat-powered operations
	(2) Introduced high-efficiency appliances
	• Introduced high-efficiency appliances and systems for air conditioning, lighting (LED),
	production equipment, pumps, compressors, motors, molding machines, transformers,
	boilers, etc.; introduced inverter control, etc.
	(3) Saved energy in production operations
	• Renewed and efficiently used equipment and machinery, converted and improved
	processes
	<3Rs and global warming countermeasures>
	In the material cycle, engaged in in-house use of recycled rubber, recycled waste rubber
	and defective material, recycled waste plastics and paper
	<ul> <li>In the thermal cycle, used waste rubber, waste tires and resins as fuel</li> </ul>
	<ul> <li>Increased recycling through enhanced waste segregation, etc.</li> </ul>
	<efforts energy="" renewable="" to="" utilize=""></efforts>
	<ul> <li>Promoted solar power in factories and logistic warehouses</li> </ul>
	<acquisition and="" environmental="" international="" management="" of="" other="" standards=""></acquisition>
	Acquired ISO14001(24 companies); communicated various efforts on corporate websites
	(CO2 emissions (16 companies); environmental management efforts (20 companies)) etc.
The Federation of	<past efforts=""></past>
Pharmaceutical	(1) Energy conversion
Manufacturers	(2) Selected high-efficiency appliances, etc.
Associations of Japan	(3) Recovered waste heat through heat exchange
	(4) Reviewed operational and control methods of equipment and appliances
	(5) Introduced cogeneration
	(6) Installed inverter control
	<pre><ettotts 2014="" fiscal="" in="" made=""></ettotts></pre>
	• In addition to the above 6 items, focused on soft measures without investment
	(operation of equipment and appliances, revision of control methods, etc.)
	CENTORIS TO UTILIZE RENEWABLE ENERgy> • Used renewable operative including color and biomacc.
	Coset renewable energy, including solar and other international standards
	>¬requisition of environmental management and other international standards>

	Most factories and research institutions are designated factories under the Act
	Concerning the Rational Use of Energy. Ten companies have acquired EMS certification at
	their offices.
Flat Glass	<past efforts=""></past>
Manufacturers	(1) Streamlined production by dismantling and consolidating flat glass manufacturing
Association of Japan	equipment (melting furnace)
	(2) Improved heat recovery efficiency through regular repairs of furnaces (cold repair)
	(3) Consolidated product types to reduce losses per oven from changing glass types and
	colors
	(4) Developed and introduced new high-efficiency burning technologies (continued)
	(5) Improved operating conditions of equipment
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Reduced the number of equipment using steam
	(2) Retained the over heat during regular checkups
	(2) Introduced inverter-controlled equipment
	(4) Reduced lighting equipment and replaced existing lighting with LED
	(4) Reduced lighting equipment and replaced existing lighting with LED
	Choire of the second s second second sec
	• Main Office buildings of some member companies run entirely on renewable energy.
	Some manufacturing factories have adopted solar power generation
Japan Federation of	<past efforts=""></past>
Printing Industries	(1) Implemented energy savings in printing machines and peripheral equipment, visualized
	energy use, and implemented measures in auxiliary facilities
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Lighting
	<ul> <li>Introduced high frequency lighting appliances and LED, switched from general</li> </ul>
	illumination to partial illumination, and introduced automatic light switch timers, etc.
	(2) Air conditioning
	Renewed air conditioning equipment, introduced inverter-controlled air conditioning
	equipment, etc.
	(3) Engines
	Prevented and improved air leakage
	Introduced inverter-controlled motors, etc.
	(4) Receiving and transforming electric power
	Renewed and improved transformers
	(5) Other
	Installed control meters
	<ul> <li>Engaged in greening of rooftops and walls</li> </ul>
	Introduced solar power systems
	Introduced energy-saving CPU
	Introduced energy management systems, etc.
Japan Aluminium	<past efforts=""></past>
Association	(1) Improved energy efficiency by improving energy-saving operations and processes
	(increased vield)
	(2) Recovered energy and achieved higher energy efficiency: promoted operations to
	improve productivity and vield
	(3) Performed energy conversion in melting furnaces holding furnaces and annealing
	furnaces: introduced regenerative hurners
	(A) Introduced energy-caving lighting
	(5) Promoted the proactive recycling of aluminum (globally)
	(6) Supported the adoption of aluminum to manufacture lightweight automobiles and
	(o) supported the adoption of adminian to manufacture lightweight automobiles and
	Efforts in ficeal 2014
	(1) Detrofited molting furnance and holding furnance and improved heat re-
	(1) reconciled menting runaces and noiding runaces and improved heat recovery
	enciency levels
	(2) Introduced energy equips lighting
	(3) Introduced energy-saving lighting
	(4) Introduced inverter-controlled appliances

	(5) Achieved energy savings by reviewing and optimizing operation management, etc.
	(6) Enhanced measures for reduced use of compressed air, etc.
	<acquisition and="" environmental="" international="" management="" of="" other="" standards=""></acquisition>
	• All 15 domestic business locations of the 10 participating companies have acquired
	ISO14001 certification.
Brewers Association of	<past efforts=""></past>
Japan	(1) Power system
	Converted from heavy oil to city gas
	<ul> <li>Replaced existing boilers with small high-efficiency once-through boilers</li> </ul>
	<ul> <li>Replaced existing freezers with high-efficiency ammonia freezers</li> </ul>
	Introduced cogeneration equipment
	Introduced methane boilers
	<ul> <li>Installed high-efficiency inverter-controlled electric motors</li> </ul>
	Introduced solar power systems
	Utilized biogas
	Utilized waste cooking oil
	(2) Preparation phase
	<ul> <li>Introduced a vapor recompressor to the wort boiling process.</li> </ul>
	<ul> <li>Introduced high-efficiency waste heat recovery</li> </ul>
	Recovered waste heat from boiling
	<ul> <li>Introduced a new boiling system</li> </ul>
	Introduced thermal VRC
	Improved cleansing processes
	(3) Drainage treatment phase
	• Introduced anaerobic waste water treatment equipment and biogas cogeneration
	systems / biogas boilers
	Utilized waste heat from effluents
	• Reduced the power required for waste water treatment by saving water in plants
	(4) Promoted other energy-saving operations
	Continued energy-saving operations
	Reviewed sterilizing utilities
	Proactively utilized heat pumps
	Reviewed the unit control system (compressors, boilers)
	• Visualized energy use by establishing an energy management system (to gain an
	understanding of daily energy use and display target consumption levels and indices)
	Renlessed conventional more un lamos with LEDs (anabling electric newer consumption
	reductions by 70% compared to evicting mercury lamps) and replaced indeer lighting
	with LEDs
	<pre>With LEDS</pre>
	(1) Reviewed holler equipment
	(2) Renewed air compressors
The Jananese Electric	<past efforts=""></past>
Wire & Cable Makers'	(1) Efficient use of heat
Association	• Implemented measures to improve the thermal insulation of furnaces
	• Converted fuel sources: improved steam traps
	• Enhanced the heat retention performance of steam piping.
	• Improved combustion efficiency levels by installing regenerative burners.
	(2) Introduction of high-efficiency equipment
	Introduced elongated high-speed equipment.
	Introduced inverter-controlled motors and pumps
	<ul> <li>Introduced inverter-controlled compressors and unit control</li> </ul>
	Introduced energy-saving stranding machines
	(3) Efficient operation of electric power equipment
	• Established efficient electric power systems through layout changes
	• Efficiently operated electric power equipment by consolidating facilities
	Reduced unnecessary operations by installing automatic suspension functions

1	<ul> <li>Consolidated and renewed transformers</li> </ul>
	(4) Other
	Altered operational practices in clean rooms and air conditioning equipment
	Suspended appliance accessories during standby; replaced existing lighting with LEDs
	Visualized energy use
	• Applied insulating paint to rooftops and exterior walls
	• Applied thermal insulating films to windows
	Reduced the number of vending machines and replaced existing machines with energy-
	saving models
	<pre>Suving models</pre>
	(1) Efficiently used heat
	(1) Efficiently used heat
	(2) Introduced high-enciency equipment
Less Data ted at	(5) Efficiency operated electric power equipment, etc.
Japan Dairy Industry	<past emorts=""> (1) Integrated and closed plants, renewed aged equipment (consolidation and intensity)</past>
Association	(1) Integrated and closed plants; renewed aged equipment (consolidation and intensity
	Improvements) (2) lister dueed high officiency lighting (LED)
	(2) Introduced nigh-efficiency lighting (LED)
	(3) Introduced energy-saving production facilities and converted fuel sources (introduced
	nign efficiency transformers, sterilizer plates, neat exchangers, etc.)
	(4) Improved the energy efficiency of air conditioning equipment
	(5) Promoted environmental management (acquired ISO14001 certification and promoted
	relevant activities)
	(6) Streamlined logistics (Continued efforts to improve the loading ratio through integrated
	shipping and to reduce the number of operating vehicles by increasing the number of
	rounds)
	<pre><tforts 2014="" fiscal="" in="" made=""> (4) Base and also be a set of the set of th</tforts></pre>
	(1) Renewed electric power receiving and distribution equipment
	(2) Renewed boilers and freezers
	(3) Introduced energy-saving manufacturing facilities
	(4) Installed LED lighting
1	(F) here we had a location of a section of the

	natural gas); adopted heat pump water heaters
	<ul> <li>Conducted unit control, introduced inverter control, and improved air leakage</li> </ul>
	(4) Lighting
	• Introduced energy-caving fluorescent lights: adopted LED lights introduced human
	detection concers
	(5) Compressors
	Reviewed discharge pressures, installed inverter control, improved air leaks, etc.
	(6) Buildings
	<ul> <li>Applied heat insulating paint and light-shielding film</li> </ul>
	(7) Power sources
	• Improved the efficiency of special high pressure transformers
Japan Sanitary	<past efforts=""></past>
Fauinment Industry	(1) Implemented measures promising large CO2 emission reductions, such as converting
Accoriation	fuels in existing kilns
Association	<pre>// Cifforts made in fiscal 2014/&gt;</pre>
	(1) Denound transformers
	(1) Renewed the best retention of storm mining and shortened the sining south
	(2) Improved the heat retention of steam piping and shortened the piping route
	(3) Renewed compressors
	(4) Renewed boilers
	(5) Installed LED lighting
	(6) Renewed air conditioning equipment
	(7) Replaced hot water boilers with steam boilers
	(8) Updated existing equipment to high-efficiency casting machines
Janan Soft Drink	<past efforts=""></past>
Association	(1) Conducted fuel conversion
Association	(2) Reduced electric nower use by introducing anaerobic treatment equipment
	(2) Reduced Electric power use by introducing anderoble reactions and exchange of steam
	(5) Reduced boller gas by reviewing steam lines (regular inspections and excitatige of steam
	traps, neat retention in neat-using equipment, enhanced thermal insulation of steam
	piping valves, etc., drain steam recovery)
	(4) Switched from heat-shrink labels that require the steam heating of PET containers to roll
	labels that do not require steam heating
	(5) Improved production efficiency levels (shortened the time required for switching
	products, optimized the time required for cleansing, improved the efficiency of sterilizers,
	improved PET bottle filling performance)
	(6) Introduced renewable energy, including solar power systems
	(7) Reduced electric power consumption by air conditioning equipment by applying thermal
	insulation paint on the rooftops of plants
	(8) Reduced energy loss by electric power saying, heat retention and cold storage
	(9) Reduced radiation loss (recovered waste heat)
	(10) Switched to energy-saving lighting (renewed to LED lighting and made sure to turn
	lights off when not in use)
	(11) Introduced best nume air conditioning systems
	(11) Introduced heat pump all conditioning systems
	(12) Promoted energy-saving operations based on ISO14001 management programs
	(13) Conducted regular inspections for air leakage
	(14) Reduced energy use for heating and cooling use by changing the flow volume of the
	circulating water in heat exchangers
	(15) Reduced energy use for heating by utilizing recovered hot water from the
	sterilization process of canned products
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Introduced energy-saving transformers
	(2) Renewed existing lighting to LEDs
	(3) Recycled heat exchanger water (reused hot waste water)
	(4) Switched to high-efficiency hollers
	(5) Installed solar newer generation equipment
	(c) Device and existing the iteration equipment
	(b) Replaced existing pollers with small high-efficiency once-through bollers
	(7) Introduced energy-saving dew removing processes
	(8) Converted to LNG
	(9) Renewal of aeration equipment for sewerage treatment
	(10) Shifted existing sewerage dryers to compressed-air models

	(11) Introduced energy-saving pumps
	(12) Renewed air conditioners, freezer and transformers
	(13) Integrated compressors
	(14) Installed inverter-controlled air compressors
	(15) Performed measures to reduce freezer load by utilizing well water cold energy
	(16) Retrofitted biomass boilers
	(17) Introduced heat recovery systems
	(18) Effectively used recovered drain water heat
	(19) Expanded the introduction of heat-insulated jackets
	(20) Renewed heat retention equipment of sterilizing devices
	<3Rs and global warming countermeasures>
	• Developed lightweight PET containers and increased the in-house production rate of PET
	containers, thus reducing the energy used in transporting products
	• Reduced environmental burden through bottle to bottle recycling practices of PET
	containers
	<ul> <li>Used returnable glass bottles and maintained the bottle reuse system</li> </ul>
	Reduced boiler combustion burden by hot waste water recovery and use
	Recovered and reused waste water
	Recovered waste transportation and fuel consumption through waste reduction
	Ffectively used waste (waste tea leaves and coffee grounds) as fertilizer
	• Used methane gas generated from formented waste too leaves as a heat source for
	boilors
	Solutions <b>Efforts to utilize renowable energy</b>
	Child is to durize renewable energy
	<ul> <li>Introduced solar power in manufacturing factories</li> <li>Installed color power lighting and color power emergency lights</li> </ul>
	Installed solar power lighting and solar power emergency lights
	Stored show for use in refrigeration and production processes
	Recovered and used methane gas by introducing industrial waste water treatment and
	anaerobic treatment equipment
Limestone Association	<past efforts=""></past>
of Japan	(1) Reduced fuel (diesel) and electric power consumption
	• Proactively introduced energy-saving neavy earthmoving machinery and plant
	equipment
	Conducted energy-saving operations
	• Developed the face in a way that would reduce the number of benches, thus shorting the
	distance climbed by heavy equipment
	Strictly conducted inspections and improvements
	<efforts 2014="" in="" made=""></efforts>
	(1) Replaced mercury lamps with LEDs
	(2) Renewed 1000kVA transformers
	(3) Renewed air conditioning equipment
	(4) Integrated power sources/ reduced transformer units
	(5) Introduced inverter-controlled dust collector fans
	(6) Renewed to energy-saving transformers
	(7) Improved BC efficiency through system improvements
	(8) Renewed screen to shorten operation time
	(9) Introduced eco-belts
	(10) Renewed heavy machinery
	<acquisition and="" environmental="" international="" management="" of="" other="" standards=""></acquisition>
	<ul> <li>13 mines of the 20 mines covered by the Follow-up acquired ISO14001 certification</li> </ul>
Japan Machine Tool	<past 2014="" and="" efforts="" fiscal="" in="" made=""></past>
Builders' Association	(1) Issued and revised the Environmental Operation Manual
	(2) Issued "Diagnoses of Environmental Performance"
	(3) Renewed air conditioning equipment installed in plants
	(4) Installed high-efficiency lighting
	(5) Renewed compressors
Flour Millers	<past efforts=""></past>
Association	(1) Consolidated factories and improved operational efficiency

	(2) Introduced cogeneration systems
	(3) Introduced high-efficiency motors, fans and transformers
	(4) Introduced high-efficiency blowers and rotation speed control devices
	(5) Introduced pressure optimization systems and unit control systems for compressors
	(6) Changed inverter control settings
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Renewed to high-efficiency motors
	(2) Renewed to energy-saving compressors
	(3) Introduced energy-saving lighting
	(4) Renewed to high-efficiency transformers
	(5) Renewed to high-efficiency fans
	(6) Improved the efficiency of blowers, etc.
	(7) Renewed corporate vehicles to eco-cars
	(8) Introduced demand monitoring systems
	(9) Installed photovoltaic papels
The Shinbuilders'	<pre> (5) installed photovoltale panels</pre>
Association of Janan	(1) Promoted the streamlining and conhistication of production by promoting investment in
and the Cooperative	automation equipment
Accordation of Japan	(2) Ponowed existing equipment to energy saying equipment
Association of Japan Shiphuildors	(2) Introduced solar power systems, etc.
Shippulluers	(5) Introduced solar power systems, etc.
	(1) Ponowod ovisting lighting to operate soving lighting including LEDs
	(2) Renewed existing lighting to energy-saving lighting, including LLDs
	(2) Renewed power receiving equipment and transformers and improved operations
	(4) Renewed power receiving equipment and improved operations
	(4) Renewed and introduced other equipment distroduced operations
	(5) Kenewed and introduced other equipment (introduced energy visualization systems,
	(6) Installed and operated solar power devices on factory promises and
	(7) Enhanced compressor management (unit control, downsizing, air loak checks, etc.)
	(?) Enhanced compressor management (unit control, downsizing, an reak checks, etc.)
	(0) Controlled neak newer through operation process adjuctments
	(10) Acquired ISO14001 certification
	(10) Acquired (5014001 certification)
	(11) Promoted reuse and recycling by ensuring waste segregation
	(12) Engaged in environmental conservation activities in Japan and overseas
lonon Industrial	
Japan muustriai	<pre><pre><pre>(1) Impreved production only processes</pre></pre></pre>
venicle Association	(1) Improved production equipment and processes
	(2) Promoted conversion to low carbon emission intensity rules
	(3) Renewed plant facilities (lighting, air conditioning, etc.) to energy saving models
	<pre><efforts 2014="" fiscal="" in=""> (4) Device the second second</efforts></pre>
	(1) Renewed energy-saving equipment, etc.
	(2) Renewed to LED lighting
	(3) Renewed air conditioning equipment
	(4) Improved exhaust heat
	(5) Converted fuel sources
	(6) Improved shot blasting operations
	(7) Applied insulating paint to factory rooftops

Japan Association of	<past efforts=""></past>
Rolling Stock	(1) Measures employing energy-saving equipment
Industries	<ul> <li>Introduced energy-saving production equipment</li> </ul>
	<ul> <li>Introduced solar power (smart grid pilot equipment)</li> </ul>
	• Expanded on introducing solar power; improved transformer efficiency (pilot equipment,
	aseismic reinforcement)
	<ul> <li>Replaced existing lighting with LEDs</li> </ul>
	(2) Measures employing high-efficiency equipment
	<ul> <li>Renewed aged equipment (transformers, air conditioning equipment, lighting</li> </ul>
	equipment, etc.) to high-efficiency equipment
	(3) Operational improvements
	<ul> <li>Formulated Environment Vision 2020, which sets up a target for 2020, decided on a</li> </ul>
	medium- to long-term plan to achieve it and implemented business location-specific
	target management
	Reduced CO2 emissions by improving productivity (ISO14001)
	<ul> <li>Reduced the electric power, fuels, gas, water utility and chemical substances used</li> </ul>
	<ul> <li>Effectively used paper resources and reduced consumption volumes</li> </ul>
	<ul> <li>Reduced the amount of waste generated and improved recycling rates</li> </ul>
	Strictly kept air conditioner cooling temperatures above 28°C and heating temperatures
	below 19°C; turned on the energy-saving mode on PCs; refrained from using personnel
	elevators
	• Made sure to turn power sources off when not in use
	(5) Utilet
	Promoted roofton greening
	Promoted a compaign to minimize energy loss (visualizing energy use status and
	reducing loss)
	Strictly engaged in energy-saving and power-saving activities at factories to achieve CO2
	emission reduction targets
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	Introduced energy-saving equipment
	• Expanded on introducing solar power; improved transformer efficiency (pilot equipment,
	aseismic reinforcement)
	Renewed transformers, air conditioners and lighting fixtures to high-efficiency models
	Promoted activities to minimize energy loss, including energy-saving patrols
	Improved air conditioning efficiency by installing air curtains and air circulators
	• Strictly maintained preset air conditioner temperatures; operated automated power
	consumption monitoring and warning systems
	Communicated detailed guidelines on energy-saving practices to raise awareness among
Janan Potroloum	
Development	(1) Consolidated and streamlined inefficiency facilities
Association	(2) Introduced energy-saving equipment and appliances at production plants: streamlined
	systems
	(3) Improved the efficiency of operations (reduced self-consumption amounts of natural
	gas)
	(4) Effectively used unharnessed low-pressure gases
	(5) Conducted flaring of waste natural gas
	(6) Introduced environmental management systems
	(7) Implemented energy-saving measures at offices
	(8) Introduced natural gas vehicles
	(9) Introduced cogeneration
	(10) Introduced fuel cells at production plants
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	<ul> <li>Constructed a solar power plant and engaged in a mega-solar project.</li> </ul>

### 2. Energy Conversion Sector

Industry	Emission reduction efforts in domestic business operations
The Federation of	<past efforts=""></past>
Electric Power	(1) Enhanced use of non-fossil energy sources
Companies of Japan	<ul> <li>Utilized nuclear power with premised on ensured safety</li> </ul>
	Utilized renewable energy
	(2) Improved the efficiency of electric power equipment
	<ul> <li>Introduced high-efficiency thermal power plants</li> </ul>
	(3) Provided energy-saving and CO2-reduction services
	Provided energy-saving and CO2-reducing services in the electric power retail sector
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	<ul> <li>Reduced fossil fuel consumption by introducing hydropower</li> </ul>
	Reduced fossil fuel consumption by taking measures to maintain heat efficiency levels
	at thermal power plants
	<ul> <li>Provided energy-saving information; promoted the diffusion of energy-saving</li> </ul>
	equipment
	<efforts energy="" renewable="" to="" utilize=""></efforts>
	<ul> <li>Developed hydro, geothermal, solar, wind and biomass power plants</li> </ul>
	Introduced megasolar
	Utilized wind power
	• Engaged in the development and introduction of new grid control systems to connect
	large volumes of fluctuating solar and wind power, whose output variability is largely
	affected by weather
	Performed mixed combustion of wood biomass at coal-fired thermal power plants
Petroleum Association	<past efforts=""> (1) Efforts involving refinence and utility (steam and electric neuron) plants</past>
orjapan	(1) Efforts involving refinery and utility (steam and electric power) plants
	of control technologies and entimitation technologies
	• Enhanced mutual use of heat among different equipment and additionally installed
	equinment for waste best and other waste energy recovery
	• Improved efficiency levels through the appropriate maintenance and management of
	equinment
	Adopted high-efficiency devices and catalysts
	(2) Energy-saving measures drawing on subsidized projects on energy conservation
	<pre><efforts 2014="" fiscal="" in="" made=""></efforts></pre>
	(1) Effective use of heat
	<ul> <li>Installed heat exchangers, mutually used heat, recovered waste heat, etc.</li> </ul>
	(2) Introduced high-performance control and high-efficiency appliances
	Installed heat pumps, cogeneration systems, high-efficiency power generating
	equipment, etc. and promoted computer control, etc.
	(3) Engine efficiency improvements
	Motorized engines, etc.
	(4) Significant improvements and advancements in processes
	• Promoted hydrogen recovery, integrated different devices, consolidated boilers,
	fundamentally reduced the amount of steam used, etc.
	<3Rs and global warming countermeasures>
	Continued to engage in activities to reduce the volume of waste generated in business
	activities and formulated an industry-wide target zero emissions of industrial waste
	· Urged by the government, the petroleum industry achieved its voluntary target to
	introduce 210,000 kl-crude oil equivalent of biofuels in fiscal 2010. The industry ensures
	that it will endeavor to introduce 500 000 kl-crude oil equivalent of biofuels in fiscal
	2017. as stipulated in the Act on Sophisticated Methods of Energy Supply Structures
	Acquisition of environmental management and other international standards>
	• All refineries have acquired ISO14001 certification, or have established an

	<ul> <li>environmental management system of equivalent standards. In recent years, with affiliated companies proactively introducing EMS, companies and corporate groups have been environmentally involved as company-wide or group-wide activities.</li> <li>In fiscal 2014, 146 business locations had acquired ISO14001 certification and 23 locations has established environment management systems.</li> </ul>
The Japan Gas	<past efforts=""></past>
Association	(1) Promoted various energy-saving measures at city gas manufacturing plants
	Introduced cogeneration
	Utilized cold energy from LNG, etc.
	- Reduced the amount of electric power purchased by manufacturing plants through the use of cold energy from LNG, etc. to generate power
	- Reduced the amount of electric power used in compressors by re-liquefying BOG
	- Utilized cold energy in freezers, etc.; installed nigh-efficiency equipment
	- Introduced high-efficiency LNG carburetors and sait water pumps
	- Reduced electric power loss by renewing special high-pressure power receiving and distribution equipment
	- Reduced electric power consumption by controlling the rotation speed of LNG cold
	insulation circulation numps: ontimized operations in accordance with demand
	- Increased power generation by ensuring maximum load (operational change to
	high- pressure lines) in top gas pressure recovery power generation plants
	- Beduced electric nower consumption by reducing BOG compressor discharge
	nressure
	- Reduced boiler fuel consumption by effectively utilizing the steam generated by off-
	grid power generation equipment
	- Reviewed methods for conducting test operations of return gas blowers while
	waiting for the arrival of vessels
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Used throttle discharge valves for sea water pumps
	(2) Reduced the use of SMV
	(3) Coated sea water pump impellers
	(4) Renewed air conditioning equipment on corporate premises
	(5) Controlled the generation of BOG during the construction of new LNG tanks
	(6) Installed inverter-controlled sea water pumps and introduced flow control at sea water users
	(7) Retrofitted expansion turbine power generation equipment
	(8) Reduced pump discharge and BOG by optimizing amounts kept cool in LNG pipelines (9) Changed the output pressure of steam accumulators
	(10) Reduced fuel consumption by changing operation procedures for heat fence
	equipment (suspension during summertime)
	(11) Conducted inverter-controlled operations of automated feed-water pumps
	(12) Replaced existing equipment with heating city gas boilers
	<efforts energy="" renewable="" to="" utilize=""></efforts>
	Used electric power generated by solar and wind power systems installed on factory
	premises and micro-hydropower facilities installed in seawater discharge channels
	connected to LNG vaporizers.
	<acquisition and="" environmental="" international="" management="" of="" other="" standards=""></acquisition>
	• In 1994, formulated and endeavored to follow the Environmental Action Guidelines,
	which aim for the wider diffusion of natural gas, which emits the least CO2 of all fossil
	Tuels. In the manufacturing sector, performed environmental management based on
	corporate standards to promote the reduction of environmental burden.
	ISO14001 certification and formulating environmental reports, socking to boost the
	standards of the gas industry as a whole.

3. Commercial Sector

Industry	Emission reduction efforts in domestic business operations
	<past efforts=""> <ul> <li>Member companies engaged in energy-saving practices by making the best efforts to introduce efficient appliances in new stores and promote the replacement existing appliances with efficient appliances in store renovations.</li></ul></past>
	<efforts 2014="" fiscal="" in="" made=""> <ul> <li>Replaced fluorescent lighting to LED at 19 stores, saving 2,679,694kWh of electric power consumption.</li> </ul></efforts>
Japan Chain Stores	<ul> <li>Switched to LED lighting at 29 stores, saving 1,610,986kWh electric power consumption.</li> <li>Introduced LED at 76 stores, saving 8,810,721kWh of electric power consumption.</li> <li>Introduced inverters at 41 stores and reduced 320t-CO2 emissions.</li> </ul>
Association	<ul> <li>Renewed heat sources and air conditioning equipment at 9 stores, saving approximately 4,000,000kWh of electric power.</li> </ul>
	<ul> <li>Introduced CO2 Refrigeration and Freezing Systems in a total of 3 stores - one store in fiscal 2013, in 2 stores in fiscal 2014, collectively reducing CO2 emissions by an estimate of approximately 210t-CO2/year.</li> </ul>
	<ul> <li>Introduced CO2 as a refrigerant in new store to open in 2014, reducing CO2 emissions by 344.5 t-CO2.</li> </ul>
	<ul> <li>Introduced automated control devices for air conditioners at 35 stores, saving approximately 2,000,000kWh power consumption.</li> <li>Introduced BEMS in fiscal 2013 (as of the end of fiscal 2014: 83 stores). In 2014, reduced</li> </ul>
	electric power consumption by 5% relative to previous year.
Japan LP Gas	<past efforts=""></past>
Association	(1) Established an Environmental Committee to manage performance, consider energy-
	saving measures and exchange information
	(2) Promoted the consolidation of terminals
	<etforts 2014="" fiscal="" in="" made=""></etforts>
	(1) Renewed air compressors
	(2) Renewed transformers
	(3) Put solar power systems in operation
	(4) Introduced high-efficiency equipment, including LED lighting
The Real Estate	<pre><past emorts=""> (1) Environmental nonformance of nouvly built office buildings</past></pre>
Companies Association of Japan	Produced heat lead in huildings (onhanced thermal insulation, installed high thermal)
Association of Japan	insulation glass and sashes, installed louvers and canopies, introduced double-skin facades, used blinds to control sunlight, etc.)
	• Proactively utilized natural energy (daylighting, natural ventilation, solar power and
	heat, rainwater, etc.)
	<ul> <li>Proactively engaged in greening (greening premises, rooftops, walls, etc.)</li> <li>Introduced cogeneration systems</li> </ul>
	· Introduced high-efficiency heat sources and transmission equipment (free cooling
	controller, unit control of pumps, variable flow volume control, heat recovery heat
	pumps, thermal storage systems, ventilation and water supply systems driven by
	temperature difference, renewal of all heat exchanger units)
	Introduced high-efficiency ACHV systems (variable air volume fan control, outdoor
	cooling systems, detailed HVAC zoning systems, automatic CO2-based outdoor air control systems, radiation air conditioning systems, desiccant air conditioning systems, etc.)
	<ul> <li>Introduced high-efficiency lighting equipment (LED, high-frequency fluorescent lighting,</li> </ul>
	light dimmer control systems, lighting control, task-ambient lighting, human detection sensors, increased number of brightness levels)
	Introduced high-efficiency power receiving and transforming equipment and systems
	(renewal of equipment, demand-based control system, automatic power factor controller)
	<ul> <li>Introduced high-efficiency elevators and escalators (inverter-controlled elevators, group control systems, human detection sensor-controlled escalators)</li> </ul>

<ul> <li>appliances, water-saving automatic faucets, automatic cleaning equipment)</li> <li>Introduced high-efficiency energy management and control systems (BEMS)</li> <li>Promoted long-life design (building design with consideration for future energy saving retrofits, openness to alterations and improvements, measures against the degradation of building frames)</li> <li>Selected construction material accommodating considerations of the reduction of HFCs and air conditioning systems, etc.</li> <li>Environmental performance of newly built condominiums         <ul> <li>installed high thermal insulation facades and double-pane windows</li> <li>Achieved energy-saving standards by enhancing the thermal insulation performance of condominium facades and window panes, thus reducing the amount of energy consumed by heating and cooling</li> <li>introduced high-efficiency water heaters</li> <li>Reduced the amount of energy consumed by water heating by introducing high-efficiency water heaters, including latent heat recovery type instantaneous gas water heaters aving equipment, including water-saving sequipment.</li> </ul> </li> <li>Introduced high-efficiency water heaters</li> <li>Introduced high-efficiency lighting water-saving stolets and faucets and utilizing rainwater and well water</li> <li>Introduced high-efficiency lighting</li> <li>Reduced the amount of energy consumed by lighting by introducing high-efficiency lighting rainwater and well water</li> <li>Introduced high-efficiency lighting and high-frequency fluorescent lighting, in private and communal areas (corridors, etc.)</li> <li>Considered the utilization of newable energy</li> <li>-Considered the utilization of renewable energy self-dependency levels by introducing takes wettrods, including table syning stand and energy-self dependency levels by introducing takes wettrods, including tableshand of electric power charging stations and other equipment t</li></ul>		Introduced high-efficiency water heaters, water supply methods, water-saving

<ul> <li>(1) Renewed air conditioning equipment</li> <li>(2) Introduced air conditioning systems using outdoor air</li> <li>(3) Introduced LED lighting</li> </ul>		Effort made in fiscal 2014>
<ul><li>(2) Introduced air conditioning systems using outdoor air</li><li>(3) Introduced LED lighting</li></ul>		) Renewed air conditioning equipment
(3) Introduced LED lighting		2) Introduced air conditioning systems using outdoor air
	(-	3) Introduced LED lighting
(4) Controlled WC lighting using human sensors	(4	4) Controlled WC lighting using human sensors

	(5) Renewed WC exhaust fans
	(6) Introduced water-saving toilets
	(7) Renewed to energy-saving elevators and escalators
The Life Insurance	<past efforts=""></past>
Association of Japan	(1) Reduced electric power consumption by conducting power saving campaigns and
	introducing energy saving appliances, etc.
	(2) Utilized other energy consumption
	(3) Improved the utilization rate of recycled paper
	(4) Reused resources by strictly segregating and recovering waste
	(5) Raised awareness of environmental issues among corporate executives through in-
	house education programs
	(6) Further promoted environmental activities by sharing good practices among member
	(7) Communicated the status of efforts to address environmental issues made by the life
	(7) Communicated the status of endits to address environmental issues made by the life
	<pre>companies on the Association website.</pre>
	(1) Sound electric neuron by adapting Cool Dis and Warm Dis drass codes, ensured lights
	(1) Saved electric power by adopting Cool Biz and Warm Biz dress codes, ensured lights are turned off, introduced energy-saving appliances and equipment, shortened
	in summer, encouraged employees to leave the office early to go home, etc.
	(2) Reduced paper use
	(3) Promoted environmental conservation activities by formulating environmental
	policies and green procurement standards
	(4) Utilized solar and wind power generation.
Telecommunications	<past efforts=""></past>
Carriers Association	(1) Introduced energy saving equipment and technologies
	• Introduced high energy-saving performance ICT devices in line with the guidelines
	formulated by the Council for Ecology Guidelines for ICT
	Promoted energy savings by connecting IP devices, such as servers and routers, to direct
	current nower supply systems
	Introduced high energy efficiency nower units and promoted energy saying measures
	(succonded tolocommunication newer units and promoted energy saving inclusions)
	(suspended telecommunication power units operating for protonged periods and
	Inverters with no load connection)
	• Introduced high-efficiency air conditioning equipment, removed air conditioning from
	wireless base stations; promoted energy-saving measures for air conditioning
	equipment (heat retention in steam piping, cold water pump exchange, air conditioning
	fan motor exchange, etc.)
	(2) Introduction of natural energy
	<ul> <li>Introduced clean energy systems, including solar and wind power systems</li> </ul>
	<ul> <li>Newly introduced fuel cell equipment at various locations</li> </ul>
	(3) Research and development in energy saving and clean energy fields
	· Developed technologies to save the energy consumed by telecommunication
	equipment, including telecommunication devices and air conditioning equipment •
	Reduced electric power use by achieving higher network efficiency by sharing optical
	cables and multiplexing
	• Reduced ICT resources on local servers by using cloud technologies and virtualization
	technologies
	(4) Measures to reduce electric power use in offices
	Promoted environmental activities by expanding and renewing ISO14001certification
	acquisition (energy saving activities at business locations and offices)
	Promoted energy management in company-owned buildings
	Promoted the visualization of the amount of electric nower used in offices
	Poduced electric newer consumption related to air conditioning by implementing the
	Cool Bis and Marm Dis compaigne
	Cool Biz and Warm Biz campaigns
	Applied insulation tilms to window glasses
	• Introduced energy-saving fluorescent lamps and LED lighting; reduced the amount of
	electric power used for illumination by controlling the hours of use
	(5) Measures to reduce emissions from logistics

	Practiced "eco-drive" on corporate vehicles and promoted the introduction of low- pollution vehicles
	Promoted a modal shift through the unified management of logistics
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Comprehensive electric power consumption reduction campaign (member company A)
	• Introduced high energy-saving performance ICT devices in line with the guidelines
	formulated by the Council for Ecology Guidelines for ICT
	<ul> <li>Promoted energy management in buildings owned by the corporate group</li> </ul>
	Introduced high energy efficiency electric power equipment and air conditioning
	equipment
	<ul> <li>Promoted energy savings by connecting IP devices, such as servers and routers, to direct current power supply systems</li> </ul>
	<ul> <li>Established and operated "green data centers" using state-of-the-art energy saving technologies</li> </ul>
	· Offered electric power consulting services to identify points requiring operational
	improvements based on data analysis
	Introduced clean energy systems, including solar and wind power systems
	(2) Good practices in implementing energy saving measures (member company B)
	<ul> <li>Energy saving measures for fixed-line telecommunication operators</li> </ul>
	- Slimmed down fixed-line telecommunications networks
	<ul> <li>Conducted energy saving construction work (introduced automatic heat source control, introduced cooling with outside air, etc.)</li> </ul>
	- Implemented energy-saving measures in telecommunications shelters and data
	centers (altered refrigerator cooling water temperatures, suspended
	telecommunication power units operating for prolonged periods and inverters with
	no load connection, etc.)
	<ul> <li>Measures targeted at mobile communications operators</li> </ul>
	- Removed air conditioning from wireless base stations
	- Extended the life of base station batteries to 24 hours
	Initiated solar power businesses
	<3Rs and global warming countermeasures>
	(1) Reduce
	- Promoted the reduced use of paper by employing Internet billing services
	(2) Reuse
	- Reused resources by promoting the reuse of commercial equipment and
	implementing a mobile phone trade-in program
	(3) Recycle
	- Promoted the recycling of telecommunication equipment
	- Promoted the recycling of telecommunication equipment. With the cooperation of
	relevant companies, launched the Mobile Recycle Network to collect mobile phones
	and PHS bodies, batteries and battery chargers at 10,000 mobile phone stores across
	Japan to be recycled and for the recovery of rare metals, thus achieving almost a
	recycling rate of almost 100%
	<pre><efforts energy="" renewable="" to="" utilize=""></efforts></pre>
	Promoted the introduction of power generation systems using solar and other natural
	energy sources
	• Some companies implemented solar power project (total power generated:
	14,403WWM)
	A consistence of any incompany of a capacity of 10,000 kwilly year at the network center.
	Acquisition of environmental management and other international standards>
	consumption at communication facilities
	Ontimized the temperature settings of air conditioning oquinment. Proactively adopted
	ton-runner energy-solving equipment
Janan Franchiso	<pre>cop-runner energy-saving equipment.</pre>
Association	(1) Lighting
	• Renewed store lighting to LEDs
	nenewed store lighting to LEDS.

	<ul> <li>Used LED lights in advertising displays</li> </ul>
	(2) Air conditioning
	Reduced the outdoor air intake of air conditioning equipment
	Introduced inverter-controlled compressors
	(3) Equipment
	<ul> <li>Renewed air conditioning / refrigerating and freezing equipment</li> </ul>
	<ul> <li>Introduced inverter-controlled freezers for refrigerating</li> </ul>
	Removed conventional ovens; renewed fryer equipment
	<ul> <li>Sprinkler systems for refrigerators and freezers</li> </ul>
	(4) Buildings
	Introduced solar power systems
	Introduced 99.99% light-shielding retractable screens
Japan Department	<efforts 2014="" fiscal="" in="" made=""></efforts>
Stores Association	(1) Proactively replaced existing lighting with LEDs; made sure to turn off lights not in use;
	removed unnecessary lighting
	(2) Renewed equipment (introduced inverter-controlled air conditioning equipment,
	introduced high-efficiency equipment, outdoor air intake, etc.); reviewed operations of
	equipment; changed temperature settings of cooling and heating systems
	(3) Reduced the number of elevators used; introduced light-shielding film for window
	panes
Japan Association of	<past efforts=""></past>
Refrigerated	(1) Replaced and introduced energy-saving equipment and technologies
Warehouses	<ul> <li>Introduced high-efficiency transformers</li> </ul>
	<ul> <li>Introduced high-efficiency compressors</li> </ul>
	Introduced devices to block outside air
	<ul> <li>Introduced energy-saving lighting equipment</li> </ul>
	Introduced closed decks
	<ul> <li>Increased the use of thermal insulating material</li> </ul>
	(2) Prevented wasteful use through daily maintenance
	<ul> <li>Maintained appropriate temperatures for stored products</li> </ul>
	Encouraged the cleansing of condensers
	Prevented cool air leakage from insulated doors
	(3) Utilized energy-saving manuals; formulated management standards and managed
	energy consumption
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Renewed existing lighting with LEDs
	(2) Adopted high-efficiency freezers
	(3) Replaced shipping vehicles: EV =>PL
Japan Foreign Trade	<past efforts=""></past>
Council, Inc.	(1) Introduced energy-saving equipment, etc.
	• Introduced energy-saving OA appliances, air conditioning equipment, LED lighting,
	thermal insulation films for windows, etc.
	(2) Ensured energy management
	Activated the power-save mode on PCs and copying machines; managed air
	conditioning temperature settings and hours; turned off the lights during lunch hour
	(3) Promoted educational activities
	Encouraged that lights be turned off when not in use; encouraged that the power-save
	mode be activated on PCs; encouraged that office appliances be turned off or plugged
	out when not in use; conducted environmental campaigns; nosted environmental
	seminars; conducted environmental e-learning, etc.
	<pre><enort 2014="" in="" made="" tiscal=""> (1) Introduced energy coving equipment</enort></pre>
	(1) incrounced energy-saving equipment
	aquipment; introduced LED lighting; turned on the energy solving mode of tellet sector
	changed fan operation hours: replaced complex machines with operative saving models
	(2) Ensured energy management
	(2) Elisuieu ellergy Ilidiagellielle • Made sure that the the last person to leave the office turned off the lighte significant
L	- who sure that the the last person to leave the office turned off the lights, air

	conditioner and PCs.
	Implemented measures to streamline energy use (preset room temperatures, managed
	the air conditioning running time, partially turned off the lights in shared spaces,
	implemented the Cool Biz campaign)
	• Strictly managed the temperature settings of air conditioners (introduced remote
	control programs)
	<ul> <li>Dimmed the lighting in work spaces removed unnecessary lighting turned off the lights</li> </ul>
	during lunch hour etc
	(2) Because development in the second sector in the second s
	• Prohibited employees from working during midnight hours; tested early morning
	commuting
	Posted "Switch off after use" on electrical appliances
	<ul> <li>Promoted the Cool Biz, Warm Biz and Casual Every Day campaigns, etc.</li> </ul>
The General Insurance	<past efforts=""></past>
Association of Japan	(1) Developed products and services that support efforts toward a low carbon society
	(2) Reduced the paper use by adopting online insurance clauses and policies and
	employing tablets
	(3) Promoted the introduction of high-afficiency lighting and advanced equipment
	(4) Poduced operatures including electric power use, by working chorter bours
	(4) Reduced energy use, including electric power use, by working shorter hours
	(5) Collaborated with stakeholders, including amiliates, nonlife insurance agents and NPOs,
	to encourage environment-friendly actions and reduce environmental burden
	(6) Conducted in-house education for a better understanding of the status of global
	environmental issues
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Air conditioning
	Renewed air conditioning equipment
	Replaced existing air conditioning equipment with high-efficiency air conditioning
	equinment
	(2) Lighting
	• Penlaced existing lighting equipment with high efficiency lighting equipment
	(3) Other
	Renewed elevators and introduced inverter control
	<ul> <li>Replaced existing power receiving equipment with high-efficiency models</li> </ul>
	Renewed air conditioning equipment and freezers
Japanese Bankers	<past efforts=""></past>
Association	(1) Efficient use of resources
	Promoted paperless offices
	Reduced electric power consumption by promoting energy-savings
	(2) Establishment of a recycling-based society
	• Promoted the use of recycled paper for envelopes used for in-house correspondences
	memo nade husiness cards convinance
	Conducted the cogregated collection of used paper
	(2) Eduction of a segregated conection of used paper
	(3) Education and awareness-raising
	Promoted in-house education programs
	Conducted lectures on environmental issues for member banks
	(4) Social contribution programs
	(5) Development of new services in response to increased environmental consciousness
	among customers
	(6) Provision of environmental information to customers
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Renewed aged air conditioning equipment: renewed lighting and air conditioning
	equipment
	(2) Renewed air conditioning equipment: renewed lighting and air conditioning equipment
	(2) Renewed an conditioning equipment, renewed lighting and an conditioning equipment
	(4) Integrated control monitoring devices in buildings, rate fitted the sevel insulation
	(4) Integrated central monitoring devices in buildings; retrotitted thermal insulation
	(5) Introduced LED lighting; renewed lighting equipment
	(6) Introduced solar power systems

	(7) Renewed electric power equipment; introduced BEMS
	(8) Introduced gas heat pump equipment
	(9) Intermittently operated air conditioners
	(10) Introduced demand-side equipment; introduced automated ventilation systems
Japan Securities	<past efforts=""></past>
Dealers Association	(1) Engaged in efforts through the securities business
	· Developed and provided financial products promoting investment in environment-
	friendly companies
	(2) Took measures against global warming
	· Promoted paperless transactions, saved electric power, introduced power-saving
	electric appliances
	(3) Contributed to establishing a recycle-based society
	(4) Environmental protection activities
	(5) Outreach and in-house education programs
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Strictly managed and optimized air conditioning equipment
	(2) Implemented the Cool Biz and Warm Biz campaigns
	(3) Shortened and controlled the running hours of air conditioning equipment,
	performed regular maintenance
	(4) Replaced existing equipment with energy-saving equipment
	(5) Removed unnecessary lighting, turned off the lights before leaving the offices and
	when not in use, reduced stand-by power
	(6) Replaced existing equipment with energy-saving office equipment and LED lighting
	(7) Moved head offices to energy-efficient buildings; integrated office space

## 4. Transportation Sector

Industry	Emission reduction efforts in domestic business operations
The Scheduled Airlines	<past efforts=""></past>
Association of Japan	(1) Renewed existing aircrafts to new models with higher fuel efficiency and promoted the introduction of new models
	(2) Improved aircraft performance through retrofits and improved fuel efficiency levels
	(3) Introduced new air traffic control systems, etc. in order to shorten flight paths and duration and improve navigation performance
	(4) Introduced Continuous Descent Operations (CDO) for higher fuel efficiency
	(5) Improved fuel efficiency by managing daily flights at optimum cruise altitudes and the
	best range speed, using simulators to reduce the time required for real aircraft training
	and evaluations, reducing the time required for engine tests, improving fuel efficiency
	through regular engine water washes
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Continued renewal to high efficiency equipment (reduced CO2 emissions by 20%
	relevant to conventional aircraft models)
The Japanese	<efforts 2014="" fiscal="" in="" made=""></efforts>
Shipowners'	(1) Introduced high-efficient waste energy recovery systems to reduce CO2 emissions
Association	(2) Retrofitted container ships in service to optimal hull shapes for energy-saving operations
	(3) Installed hybrid electric power supply systems
	(4) Installed waste gas dust removal devices
	(5) Performed a long-term experiment to test variable turbine nozzle-type superchargers on real vessels
	(6) Periodically cleaned and painted ship bodies and polished propellers for improved propulsive efficiency
	(7) Improved fuel valves and exhaust valves in order to improve the fuel efficiency of the main engine
	(8) Used combustion improvers
	(9) Extended the hours of use and reduced consumption amounts by properly managing
	lubricating oil

	(10) Thoroughly performed maintenance of main engines and auxiliary machines as well
	as the cleansing and maintenance of exhaust gas economizers
	(11) Monitored combustion status using an engine performance analysis system
	(12) Selected optimal nozzle rings for superchargers
	(13) Implemented energy-saving measures, including turning off unnecessary pumps of
	vessels in harbor, galley fans during non-cooking hours, and the lights in unoccupied
	rooms
	(14) Optimized the amount of fuel oil and ballast water retained on board a vessel
Japan Trucking	<past efforts=""></past>
Association	(1) Promoted measures to encourage "eco-drive"
	(2) Ensured that drivers refrained from idling
	(3) Promoted the introduction of low-emission vehicles
	(4) Promoted measures to replace existing vehicles with those conforming to the most
	recent regulations
	(E) Took measures to reduce gas emissions
	(c) Tool measures to reduce gas emissions
	(b) Took measures to improve transportation enciency
	(7) Promoted environmental outreach
	(8) Engaged in petitions, etc.
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Provided subsidies for the introduction of low-emission vehicles (subsidies were
	granted for 1,012 vehicles in fiscal 2014)
	(2) Provided subsidies for the introduction of air heaters and other devices to support
	efforts to refrain from idling (subsidies granted for air heaters: 490; subsidies granted
	for battery-run air conditioning devices: 308)
	(3) Provided subsidies for the introduction of EMS (eco-drive management system) and
	drive recorder equipment (14,574 drive recorders)
Japan Federation of	<past efforts=""></past>
Coastal Shinning	(1) Equipment-related measures
Associations	Adopted larger hulls
Associations	Introduced new models
	Adopted energy-saying ship configurations devices and equipment
	(2) Operational measures
	(2) Operational measures
	Parferrand en enzy en inclination eigeneric fen en ek individuel ek in
	• Performed energy-saving diagnosis for each individual ship
	• Selected transport routes
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Introduced equipment with improved propulsive efficiency (hulls, propellers, etc.)
	(2) Introduced low-friction coating
	(3) Introduced LED lighting
The Association of	<past efforts=""></past>
Japanese Private	(1) Promoted the introduction of energy-saving railcars upon renewal or new purchases
Railways	(2) Adopted driving methods that require less electric power consumption and
	appropriately operated train services in accordance with transportation demand
	(3) Eliminated unnecessary lighting on trains and replaced existing lighting equipment
	with LEDs
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Continued to promote the introduction of energy-saving railcars
All Japan Freight	<past efforts=""></past>
Forwarders	(1) Enhanced and expanded off-rail stations (ORS), beginning with the establishment
Association	of Hanyu ORS
	(2) Supported the introduction of low-emission vehicles (vehicles conforming to emission
	standards, CNG vehicles)
	(3) Promoted replacement with larger vehicles
	<efforts 2014="" fiscal="" in="" made=""></efforts>
	(1) Implemented the Green Logistics Promotion Subsidies Program
	• Units introduced: 24 31ft containerships, etc.: 15 conforming vehicles
	• Estimated investments: approximately 2,900 million ven (containershins, etc., 900
	million ven: conforming vehicles: 2 000 million ven)

# Examples of cooperative efforts among participating industries

### 1. Industrial Sector

Industry	Examples of cooperative efforts among interested parties
The Japan Iron and Steel Federation	<ul> <li>(1)LCA-based efforts</li> <li>Iron and steel manufacturers have proactively promoted the development of high-performance products characterized by their light weight, high efficiency, long life, etc. These products contribute to energy savings at the end-use phase in society, for example, when they are used in automobiles. Renewed the "Study on contribution of steel products to energy savings in society from LCA viewpoint" which is a compilation of CO2 emission reductions at the use phase of iron material and estimated the emission reductions achieved as of fiscal 2014. The CO2 emission reductions achieved by high-performance iron material as of fiscal 2014 (fiscal 1990-2014; total of domestic and overseas reductions) were estimated to be 26.66 million t-CO2.</li> <li>(2) Contribution through by-products</li> <li>Replaced common cement (Portland cement), generating CO2 during the raw material calcination process, with blast furnace slag which does not require calcination, thus largely contributing to CO2 emission reduction. Emissions avoided as a result of replacement with slag is estimated to be 10.88 million t-CO2.</li> <li>(3) Efforts leading to public campaigns</li> <li>Implemented energy-saving activities through environmental household account books. Enhanced efforts taken in member companies, including "outreach targeted at all employees including those of group companies" and "developing an Intranet-based environmental household account book system." Approximately 18,000 households cooperated in efforts in fiscal 2014.</li> </ul>
Japan Chemical	(1) Performance in fiscal 2014
Industry Association	<ul> <li>Promoted the development and dissemination of chemical products and technologies and contributed to society-wide CO2 emission reductions through the supply chain.</li> <li>Published a supplementary document for the international guidelines for calculating the avoided GHG emissions possible by chemical products published in 2013 (March 2015). Promoted the utilization of the guidelines.</li> <li>Estimated avoided CO2 emissions through products operating in fiscal 2014 were: 2.93 million tons through solar power systems; 1.23 million tons through high fuel efficiency tires; 3.28 million tons through LED light bulbs (estimated based on a comparison with reference products)</li> <li>(2) Contribution through low-carbon products and services</li> <li>Contributed to domestic CO2 emission reduction through a total of 74 low-carbon products, including housing-related material, automobile-related material and household appliance-related material.</li> </ul>
Japan Paper Association	<ul> <li>(1) Contribution through low-carbon products and services</li> <li>Promoted CO2 emission reductions by engaging in efforts to develop lightweight and thin cardboard from an lifecycle perspective beginning from the manufacturing phase at factories through to the recovery and recycling phase. Reduced the average weight of a unit area of paper by approximately 7.1% by disseminating lightweight base paper with the same performance and intensity but weighing 25% of conventional paper.</li> <li>(2) Efforts leading to public campaigns</li> <li>Used environmental household accounts to check the status of electricity, gas and water use in each household, thus raising public awareness regarding energy-saving.</li> <li>(3) Efforts to foster and conserve forest sinks</li> <li>Set up a target to increase domestic and overseas afforestation area in possession or management by a total of 425,000 ha in fiscal 2020 from 1990 levels to 700,000 ha. Performance up to fiscal 2014 was 626,000 ha (including overseas efforts).</li> </ul>
Japan Cement Association	<ul> <li>(1) Performance in fiscal 2014</li> <li>Conducted research and outreach activities, including joint research and opinion</li> </ul>

	exchange, to "reduce emissions by improving the fuel efficiency of heavyweight vehicles
	on concrete pavement."
	<ul> <li>Accepted waste and byproducts generated in other industries for utilization in cement</li> </ul>
	production to "contribute to the establishment of a Sound Material-Cycle Society".
	(2) Contribution through low-carbon products and services
	Collaborated with related industries (cement users) to promote measures to address
	the heat island phenomenon, build high-insulation housing, extend the life time of
	buildings, reduce the energy used in construction, etc.
	(3) Efforts leading to public campaigns
	· Supported local environmental education and implemented environmental outreach
	activities in areas around business locations.
	(4) Efforts to foster and conserve forest sinks
	• Efforts taken by member companies include greening of remaining walls of limestone
	guarries, forest conservation activities in water source areas of water used at plants,
	acquired forest certification at company-owned forests, etc.
Liaison Group of	(1) Efforts made in fiscal 2014
Japanese Electrical	• In fiscal 2014, new installations and shipped products contributed to CO2 emission
and Electronics	reductions amounting to an estimate of 3.69 million tons in power generation, 1.13
Industries for Global	million tons in household appliances, 1.09 million tons in ICT products and solutions.
Warming Prevention	• New installations and shipped products in fiscal 2014 are projected to make lifecycle-
	based contributions amounting to CO2 emission reductions of 84.43 million tons in
	power generation, 14.25 million tons in household appliances and 5.43 million tons in
	ICT products and solutions.
	(2) Contribution through low-carbon products and services
	• Contributed to the prevention of global warming and the achievement of a low-carbon
	society from both energy supply and demand perspectives by providing low-carbon
	energy-saving products and services to the domestic energy conversion and residential
	and commercial sectors.
	• Formulated methodology to calculate avoided CO2 emissions from major products and
	services. Based on this method, calculated and disclosed the total avoided CO2
	emissions across the industry.
	• Estimated the avoided emissions attributable to semiconductors and electronic parts,
	as examples of products included in the calculations.
	(3) Efforts leading to public campaigns
	Formulated the annual "Unified Agenda for All Electrical and Electronics Organizations"
	and engaged in efforts to save electric power in offices and the homes of employees.
	(4) Efforts to foster and conserve forest sinks
	Conducted green space and Satoyama conservation and tropical forest restoration
	activities at domestic and overseas locations
	(5) Future efforts
	Announce the emissions avoided every fiscal year. Update calculation methodology as
	required.
Japan Federation of	(1) Performance in 2014
Construction	· Implemented surveys on "figures used in the Energy Saving Plan," "the status of
Contractors	progress with the Comprehensive Assessment System for Built Environment Efficiency
	(CASBEE)" and "the figures used in the CASBEE assessment." Calculated CO2 emission
	reductions from operations in fiscal 2013 to be 255,000 tons.
	Collaborated with the contractees, The Real Estate Companies Association of Japan and
	the Japan Building Owners and Managers Association, under the Environmental
	Measures Research Group to conduct various activities.
	<ul> <li>Submitted opinions regarding MLIT's ministerial ordinances</li> </ul>
	• Participated in the Low Carbon Promotion Conference with a membership of 18
	construction-related organizations
	(2) Contribution through low-carbon products and services
	• Enhanced the introduction of renewable energy and designed, operated and
	constructed equipment and systems, etc. leading to highly efficiency energy use.
	(3) Efforts leading to public campaigns
	Participated in Eco Products 2014 (December 2014 in Tokyo)

	(4) Efforts to foster and conserve forest sinks
	· Conducted afforestation and biodiversity conservation projects at branch offices and
	business locations of member companies
	Proposed and implemented biodiversity conservation methods that consider achieving
	CO2 emission reductions at the planning stage or construction stage
	(5) Future efforts
	• Expand efforts to reduce CO2 emission in the building use phase
	Continue environmental outreach and education efforts, including participation in Eco
	Products 2015
Japan Automobile	(1) Contribution through low-carbon products and services
Manufacturers	• Engaged in inter-industrial collaboration to develop and introduce innovative
Association Inc	technologies in raw material parts, equipment and manufacturing methods in order
Janan Auto-Body	to promote the decarbonization of products and services, thus contributing to the
Industries Association	reduction of $CO_2$ emissions in the transportation sector by improving the fuel
Industries Association,	officiency of new vehicles and discominating next generation vehicles
IIIC.	(2) Efforts loading to public comparing
	(2) Enoris reduing to public campaigns
	• Engaged in educational and outreach erforts, including a cool Biz dress code, eco-
	commuting, no idling, environmental management training, and promoted the use of
	environmental household account books.
	(3) Efforts to develop and conserve forest sinks
	Engaged in afforestation and forest management activities, conservation efforts for
	native river species, and efforts to conserve biodiversity
Japan Auto Parts	(1) Performance in 2014
Industries Association	Encouraged energy-saving efforts by member companies by hosting seminars and visits
	and introducing good practices on the website.
	<ul> <li>Conducted research on methods to quantify avoided CO2 emissions.</li> </ul>
	(2) Contribution through low-carbon products and services
	• Shared the energy-saving technologies accumulated by member companies and
	management knowhow to promote net CO2 emission reductions from the product
	lifecycle.
	• Promoted the designing of products with consideration for LCA. Established a
	framework to address CO2 emission reductions in the entire supply chain
	(3) Efforts leading to public campaigns
	• Joined hands with administrative and educational hodies and implanted environmental
	education programs welcoming the participation of employees and their families
Japan Endoration of	(1) Efforts made in fiscal 2014
Housing Organizations	• Civen the importance of reducing CO2 emissions from the entire product lifecusle when
	solven the importance of reducing CO2 emissions from the entire product mecycle when
	reducing CO2 emissions from nousing, particularly promoted the dissemination of
	nignly insulated airtight housing, and the adoption of power generation equipment,
	including solar power systems, and high-efficiency appliances in order to contribute to
	the reduction of CO2 emissions during the "end-use phase" when emissions are largest.
	(2) Contribution through low-carbon products and services
	• Developed and disseminated "net zero energy houses" and "lifecycle carbon minus
	housing"
	(3) Efforts leading to public campaigns
	· Compiled and distributed environmental education booklets "Let's live in an energy-
	efficient home" and "Reasons why you should live in an energy-efficient home"
	Hosts the Housing Month Central Event every October on themes related to energy
	efficiency
	(4) Efforts to foster and conserve forest sinks
	• Performed tree planting and siliviculture efforts in Japan and overseas. By planting a
	certain number of trees in the gardens of each house constructed, some companies
	have planted over 10 million trees.
	(5) Future efforts
	Participate in Housing Month Central Event 2015

Japan Mining Industry	(1) Performance in fiscal 2014
Association	Promoted the construction and utilization of renewable energy power plants, including
	hydropower and solar power. Generated 40 million kWh/year in fiscal 2014 (19,700 t-
	CO2 equivalent)
	(2) Contribution through low-carbon products and services
	· Provided material, parts and services supporting the energy-saving performance of
	automobiles and household appliances
	Promoted and disseminated lead storage batteries that contribute to the stabilization
	and smoothing of output of solar power
	• Harnessed exploration technologies to develop geothermal power and supplied steam
	and electric power. Member companies are involved in geothermal power generation
	in four locations amounting to a total of 15,450 kW.
	• Promoted the streamlining of transportation means, including shifting from truck
	transportation to more efficiency surface transportation
	(3) Efforts leading to nublic campaigns
	• Promoted information sharing and oninion exchange among member companies by
	hosting regular meetings
	nosting regular meetings
	• Conducted outreach activities, including nosting environmental workshops for children
	and their parents, publishing articles in in-house newsletters, engaging in beautification
	efforts and hosting factory visits.
	• Contributed to the local society. For example, reduced CO2 emissions and stimulated
	local forestry by replacing part of the coal used as fuel and as a reducing agent with local
	wood pellets
	(4) Efforts to develop and conserve forest sinks
	Managed corporate forests; performed restoration, afforestation and greening old
	mining sites
Lime Manufacture	(1) Contribution through low-carbon products and services
Association	Reduced CO2 by expanding the use of high reactivity hydrated lime (reduced the energy
	required for manufacturing and transportation by reducing the hydrated lime use by
	40%)
	<ul> <li>Reduced CO2 by replacing limestone with calcined lime in the iron and steel industry</li> </ul>
	<ul> <li>Promoted modal shift (shifted from truck transport to marine transport)</li> </ul>
	(2) Efforts leading to public campaigns
	Compiled a pamphlet on ways to use limestone in 2006. Compiled "The Limestone
	Industry: Environmental Efforts" from 2007 to 2013 to deepen public understanding
	about limestone.
	<ul> <li>Hosted visits to plants and quarries for local residents.</li> </ul>
	· Engaged in outreach activities through proactive participation in prefectural and
	regional industrial expositions.
	• Engaged in outreach activities related to efforts to reduce CO2 emissions.
	(3) Efforts to foster and conserve forest sinks
	Participated in forest conservation activities
	Provided funding for forest management
The Japan Rubber	(1) Performance in 2014
Manufacturers	• Reduced CO2 emissions through efforts made during the procurement, production, use
Association	and disposal phases.
	(2) Contribution through low-carbon products and services
	• Under the tire labeling program initiated in January 2010 implemented a rating
	program for two features (rolling resistance and wet grin ratings) and presented ratings
	in a user-friendly manner
	• From an LCA perspective, made improvements in the performance of tires and non-tire
	non an Eco perspective, made improvements in the performance of thes and non-the
	(2) Efforts loading to public compaigns
	(5) Enorts reading to public campaigns
	Conducted activities serving to reduce CO2 emissions in the fields of local activity, forest
	planting and conversation, environmental education and funding.
	(4) Efforts to foster and conserve forest sinks
	Conduced 64 undertakings, including planted trees and distributing seedlings

The Federation of	(1) Efforts made in fiscal 2014
Pharmaceutical	<ul> <li>reduce CO2 emissions from commercial vehicles.</li> </ul>
Manufacturers'	(2) Contribution through low-carbon products and services
Associations of Japan	Substantially reduced the use of alternative fluorocarbons (HFC), a greenhouse gas
	(3) Efforts to foster and conserve forest sinks
	Six companies planted 2.8ha of forest; seven companies fostered and conserved 139ha
	of forest by participating in forest development activities led by local
	(4) Efforts leading to public campaigns
	Promoted energy savings at home by introducing an in-house "eco-point" program
Flat Glass	(1) Reduction potential and performance in 2013
Manufacturers	· Conducted LCA of Eco-glass (multi-layered low-e glass that fulfills next-generation
Association of Japan	energy efficiency standards). The increased GHG emissions during production can be recovered in a short period of time due to reductions in air conditioning load.
	(2) Contribution through low-carbon products and services
	• The estimated dissemination rate of multi-layered glass (in terms of glass area
	coverage) in new housing in fiscal 2013 was: 96.1% in stand-alone housing units and
	73.2% in collective housing units. Reduced 262,000t-CO2 annually. • Developed
	products that do not require scaffolding in order to promote the wider use of Eco-glass in office buildings/
	(3) Efforts leading to public campaigns
	• Conducted a comparing to discominate Eco Class among general consumers (used
	travelling hands-on displays, established a logo mark, opened a special website, conducted outreach via various media)
	(4) Efforts to foster and conserve forest sinks
	• Proactively used paper manufactured from forest thinnings
	Replaced wooden boxes for product delivery from overseas factories with returnable
	steel pallets in order to support tropical forest conservation
Japan Federation of	(1) Performance in fiscal 2014
Printing Industries	Promoted the utilization of plant-derived ink
	• Used waste heat from deodorizing equipment and reviewed the return rate of exhaust
	air
	Developed collective engine control systems, installed inverter-controlled air
	conditioning and engine motors improved catalyst performance
	Initiated Green Printing certification of digital printers for factories
	(2) Contribution through low-carbon products and services
	• Established the Printing Service Green Standard as an industrial standard for
	any ironmont friendly printing services and promoted (O2 emission reductions
	• Developed thinner packaging material, including PET bottles, etc. and engaged clients
	in CO2 reduction efforts.
	(3) Efforts leading to public campaigns
	Participate in Eco Products 2014
	Labeled printed products manufactured using environment-friendly methods with a
	"GP" label. Awarded the "GP Environmental Grand Prize" to clients ordering large
	amounts of printed material with the GP label.
	(4) Efforts to foster and conserve forest sinks
	Continued domestic and overseas forest planting and conservation activities
	<ul> <li>Proactively used FSC and PEFC-certified paper for printing</li> </ul>
	(5) Future efforts
	· Continue to collaborate with clients to develop energy-saving printing systems and
	auxiliary equipment.
	Participate in Eco Products 2015.
Japan Aluminiuim	(1) Efforts made in fiscal 2014
Association	Continuously promoted the recycling of aluminum cans.
	(2) Contribution through low-carbon products and services
	• Reduced CO2 emissions through the use of aluminum to manufacture more lightweight
	automobiles. (Reduced CO2 emissions equivalent to sixfold of emissions from the
	manufacturing phase when traveling 100,000 km)

	Reduced CO2 emissions through the use of aluminum to manufacture more lightweight
	rolling stock.
	(3) Efforts leading to public campaigns
	Conducted outreach programs to promote the recycling of aluminum cans. Awarded
	around 100 best practices in one year.
	• Promoted information provision and outreach to increase the recovery rate of
	aluminum cans by increasing collection routes that are not operated by the local
	government
	Promoted outreach and educational activities.
	(4) Future efforts
	• Continue aluminum recycling operations to make returning cans an established activity
	among the general public
Brewers Association of	(1) Efforts made in fiscal 2014
Japan	• Continues to calculate CO2 emission from the entire value chain since fiscal 2013.
	• Collaborated with the distribution industry to implement a campaign to promote carbon
	offset products
	<ul> <li>Collaborated with other industries in discussions to reduce packaging</li> </ul>
	(2) Contribution through low-carbon products and services
	• Started to use lightweight returnable bottles (90g lighter per bottle) from November
	2014 Plans to complete full transition to lightweight bottles in the next ten years thus
	reducing 930 t-CO2/year in the manufacturing and distribution processes
	(3) Efforts leading to nublic campaigns
	• Collaborated with the administrative and distribution sectors to educate consumers
	regarding carbon offset efforts
	(A) Efforts to foster and conserve forest sinks
	• Cooperated with the national and local governments to recharge water in 18 locations
	covering a nationwide total of 8 000ba (as of April 2015) Plans to expand water
	recharge area to 12 000ha by 2020
	<ul> <li>Conducted CO2 absorption activities including forest management in corporate forests</li> </ul>
	(5) Future efforts
	• Continue abovementioned measures based on their effectiveness
The Japanese Electric	(1) Efforts made in fiscal 2014
Wiro & Cable Makers'	• Promoted the Japan-led development of an IEC standard for the conductor size of the
Association	ontimal electric wire and cable
Association	• Given that technologies to size up conductors increase operate efficiency, established a
	language Cable and Wire Makers' Association (ICS) standard and engaged in public
	relations activities
	(2) Efforts loading to public compaigns
	<ul> <li>(2) Enorts leading to public campaigns</li> <li>Promoted any ironmental bousehold bookkeeping among employees and their families</li> </ul>
	Encouraged continued efforts by awarding good practices
	(2) Enture efforts
	• Consider the incorporation of conductor size optimization technologies in relevant
	laws enhance calculating software, ongage in public relations efforts addressing users
	• Aims to mainstream superconductor cables in 2020 (a 5% reduction in electric nower
	consumption is expected from railways)
Janan Dairy Industry	(1) Efforts made in fiscal 2014
Association	• Formulated the Japan Dairy Industry Association's Voluntary Action Plan on the
A33001011011	Environment and identified common challenges to be addressed and checked progress
	in the Environmental Committee and relevant working groups
	(2) Contribution through low-carbon products and services
	• Promoted the reuse of glass bottles and the recycling of plastic bottle cans
	Adopted thinner, lightweight packages: improved the recyclability and separatability of
	packages
	Performed environment-friendly design, including reducing package weight
	Reduced the energy required for transnortation through cooperative transport with
	other companies in the industry
	(3) Efforts leading to nublic campaigns
	(a) Error a leaning to having cambriding
	<ul> <li>Promoted milk carton recycling.</li> </ul>
------------------------	--
	Conducted environmental conservation activities in areas around plants and business
	locations
	Fully implemented Cool Biz and Warm Biz dress codes; introduced daylight savings time;
	(4) Efforts to foster and consonio forest sinks
	(4) Enorts to Toster and conserve forest sinks
	Conserved and planted trees in serverate forests
	Conserved and planted trees in corporate forests.
	(5) Future efforts
	• Consider decarbonizing energy sources (neavy on=> Livo, biomass, etc.)
	Improve milk carton recycling and reduction rates
Japan Copper and	(1) Efforts made in fiscal 2014
Brass Association	• Reduced CO2 emissions by introducing thinner copper sheets and thus reducing the
	weight of vehicle and mobile phones
	• Reduced CO2 emissions by manufacturing thinner conner sheets and thus reducing
	nroduction volume
	• Increased the use of recycled conner to reduce energy consumption in the conner
	refining process
	(2) Contribution through low-carbon products and services
	• Reduced emissions by 2.31 million t-CO2/year by using high-afficiency grooved copper
	in air conditioner heat eychangers (estimate for 2014)
The Janan Bearing	(1) Efforts made in fiscal 2014
Industrial Association	• Conducted "Research studies on the LCA of roller hearings" as in fiscal 2013. Discovered
	that of the material manufacturing transportation and use phases (O2 emissions
	were largest at the use phase in line with the previous study.
	(2) Contribution through low carbon products and services
	• Rearings support rotation and reduce friction in automobiles, various machines and
	devices, and wind newer generators. The product itself is energy sovings eriented
	devices, and wind power generators. The product itself is energy savings-oriented.
	(2) Efforts loading to public comparings
	(5) Enoris leading to public campaigns
	and other corporate reports
	Conducted educational and outroach activities including issuing environmental
	bouched account books establishing an "environmental month" and issuing an
	anvironmental neweletter
	(A) Efforts to fostor and consonio forest sinks
	(4) Enorts to roster and conserve rolest sinks
	bonieu nanus with local governments in reforestation enorts in mountains located near
	(5) Euturo offorts
	• Issue a compilation of best efforts demonstrating that bearings as product parts
	contribute to energy savings
Janan Sanitary	(1) Efforts made in fiscal 2014
Industry Equipment	• Employed ICA throughout the industry and promoted the development of
Association	environment- friendly products
Association	(2) Contribution through low-carbon products and services
	• Reduced CO2 emissions by developing and disseminating water-saving toilets.
	prefabricated bathrooms, system and kitchen units.
	• Ensured that corporate vehicles engaged in environment-friendly driving (eco-drive)
	Based on criteria for vehicles installation, installed optimal vehicles according to
	mileage and frequency to reduce fuel consumption.
	(3) Efforts leading to public campaigns
	• Continued to encourage energy savings in households by presenting an energy-savings
	guide in the summertime.
	• Held workshops nationwide for elementary school students to learn about the
	importance of water.
	(4) Efforts to foster and conserve forest sinks

	<ul> <li>Planted oak seedlings in 26 locations nationwide and cleared underbush</li> </ul>
	Hosted two Satoyama and wetland conservation efforts and two forest conservation
	efforts annually.
Janan Soft Drink	(1) Evaluation from an LCA perspective
Association	• Reduced 38 200t CO2 from the transportation phase by increasing the in-house
Association	neduction rate of DET bettles
	(2) Could the line the sector could also a loss
	(2) Contribution through low-carbon products and services
	<ul> <li>Reduced the use of fossil fuel resources and thus CO2 emissions by adopting biomass</li> </ul>
	labels and PET resins of plant origin
	<ul> <li>Adopted lightweight PET bottles that can be crushed and rolled</li> </ul>
	<ul> <li>Expanded business-to-business relations through mechanical recycling</li> </ul>
	• Installed more vending machines that impose less environmental burden
	(3) Efforts leading to nublic campaigns
	<ul> <li>Introduced daylight saying time</li> </ul>
	Conducted daylight-saving time
	Conducted environmental education programs for all employees
	Conducted environmental education programs for children
	Participated in environmental beautification efforts around business locations hosted
	by local governments and NPOs
	(4) Efforts to foster and conserver forest sinks
	Collaborated with the national and local governments in water recharge activities
	· Acquired forest certification in corporate forests and conducted proper forest and
	mountain management
	Implemented tree-planting activities
Limestone Association	(1) Contribution through low-carbon products and services
of Japan	<ul> <li>Made an effort to constantly cumply high quality limestone for the expanded utilization</li> </ul>
Огјаран	• Made an enort to constantly supply high-quality inflestone for the expanded utilization
	of waste fuels at cement plants.
	(2) Efforts leading to public campaigns
	• Implemented the Cool Biz and Warm Biz campaigns; participated in the "No My Car"
	campaign encouraging people to refrain from driving individually
	(3) Efforts to foster and conserve forest sinks
	<ul> <li>Conducted greening of limestone quarry walls and piling area</li> </ul>
	• Promoted afforestation activities and cultivated and preserved rare plants
	Participated in forest conservation activities hosted by local governments
	(A) Future efforts
	• Take note of offerts made by the compart industry, the largest limestone user, and
	and the state of enores that the state interview of another subject to a state of another subject to the state interview of another subject to the state of an other subjec
	continue to promote the stabilization of product quality
Japan Machine Tool	(1) Contribution through low-carbon products and services
Builders' Association	Promoted energy savings by adopting high-efficiency motors, inverter-controlled oil
	pressure equipment, and accumulators.
	· Promoted energy savings by integrating processes conventionally done by different
	equipment
	Reduced electric power consumption by shifting from oil pressure to electric power and
	automated processes
	Promoted energy sovings by improving the precision and quality of processing
	(4) Effects used a to final 2014
Flour Millers	(1) Efforts made in fiscal 2014
Association	• Promoted higher efficiency in logistics by shifting to lorry transport from product
	packaging and utilizing train and ship transport
The Shipbuilders'	(1) Efforts made in fiscal 2014
Association of Japan	• Constructed energy-saving ships, including new bulk carriers (reducing CO2 emissions
and the Cooperative	by 27% compared to conventional levels)
Association of Janan	Continued development of energy-saving tankers
Shinhuilders	(2) Contribution through low-carbon products and services
Sillbounders	(2) contribution through low-calbon provides and services
	(developed antipole will also used and forther and a started by the null system
	(developed optimal null snapes; reduced friction resistance), the engine system
	(improved diesel engine efficiency; developed waste heat recovery systems), the
	operation system (optimal operation system)
	(3) Efforts leading to public campaigns

	Conducted environmental education, including outreach on ISO14001, for all
	employees
	Distributed an Environmental Planning Book to all employees, including those employed
	at partner companies.
	<ul> <li>Encourage all employees to keep environmental household account books</li> </ul>
	<ul> <li>Promoted the "No My Car Day" (car sharing promotion) campaign.</li> </ul>
	(4) Efforts to foster and conserve forest sinks
	Planted and managed trees on business location premises
	Participated in the "Corporate Forest Planting" program promoted by Hyogo Prefecture
	Performed tree-planting efforts at overseas plants (the Philippines)
	(5) Future efforts
	Continued to develop energy-saving ships
Japan Industrial	(1) Efforts made in fiscal 2014
Vehicles Association	• Engaged in efforts towards pilot tests, deregulation and the formulation of safety
	standards for the market introduction of fuel cell-powered forklifts which do not emit
	• Improved the fuel efficiency of engine-powered forklifts (improvements by 15-30%)
	Developed and disseminated high-efficiency battery-powered forklifts to encourage the
	replacement of engine-powered forklifts
	(2) Efforts leading to public campaigns
	Conducted environmental education
	Participated in local outreach activities to raise environmental awareness
	(3) Efforts to foster and conserve forest sinks
	Performed tree-planting and forest conservation efforts
Japan Association of	(1) Efforts made in fiscal 2014
Rolling Stock	Exchanged opinions with major rolling stock and component manufacturers and user
Industries	railway companies
	<ul> <li>(2) Contribution through low-calbon products and services</li> <li>Paduced the weight of rolling stock through the widespread use of lightweight staipless</li> </ul>
	steel cars and lightweight aluminum cars
	• Introduced LED lighting
	Promoted the introduction of operation support systems that provide information on
	energy-saving operations
	• Formulated standards for "product assessment" and promoted environment-friendly
	design meeting the standards
	<ul> <li>Conducted LCA-based evaluations of products with high CO2 reduction potential during</li> </ul>
	the produce use phase.
	(3) Efforts leading to public campaigns
	• Established a recycling training facilities at a manufacturing plant. All employees were
	engaged in promoting the segregated disposal and recycling of waste.
	Conducted environmental education activities at educational institutions around plants
	Raised energy-saving consciousness among employees via in-house newsletters and
	lectures and having them attend courses.
	· Saved electric power by keeping lights on for a limited time and managing room
	temperatures; promoted Cool Biz and Warm Biz dress codes
	(4) Efforts to foster and conserve forest sinks
	<ul> <li>Continued efforts to increased green spaces on factory premises</li> </ul>
	<ul> <li>Joined hands with local governments to plant trees and manage forests.</li> </ul>
	Engaged in environmental education efforts by planting trees and conserving Satoyama
	with local elementary school students
Japan Petroleum	(1) Contribution through low-carbon products and services
Development	Reduced CO2 emissions in the user phase by increasing natural gas production
Association	Contributed to the acceleration of natural gas introduction by constructing LNG and GTL
	production plants, developing catalysts for hydrogen production, and manufacturing
	cells for fuel cells
	• From an LCA perspective, reduced GHG emissions by expanding the natural gas pipeline
	network and enabling the distribution of LNG to distant users by employing tank lorries

<ul> <li>Promoted the recycling of waste (steel pipes, waste oil and metal scrap</li> </ul>
(2) Efforts leading to public campaigns
Purchased products meeting green procurement standards, provided support for
customers in their energy-saving efforts and gave lectures at universities and academic
meetings
(3) Efforts to foster and conserve forest sinks
Promoted afforestation activities (UAE, Indonesia, Australia, Niigata Prefecture,
Hokkaido Prefecture, etc.)

# 2. Energy Conversion Sector

Industry	Examples of cooperative efforts among interested parties
The Federation of	(1) Efforts made in fiscal 2015
Electric Power	• Engaged in efforts to disseminate Japan's advanced technologies, including high-
Companies	efficiency electric appliances, such as heat pumps.
	• Engaged in efforts towards achieving the government of "introducing smart meters in
	all households and plants in the early 2020s"
	(2) Efforts leading to public campaigns
	• Proactively promoted efforts that would serve to promote energy savings and CO2 reductions among customers
	Provided customers with energy-saving information on websites
	• Distributed calendars and household account books introducing energy-saying ideas.
	Hosted exhibitions on energy-saving proposals and seminars on energy-saving:
	implemented educational activities on the environment and energy
	• Visited customers' homes to measure the electric current of electric appliances and
	provide advice on contracts and energy-saving practices
	<ul> <li>Implemented environmental education programs for employees, including an Environmental Trainer Program and "e-learning"</li> </ul>
	(3) Efforts to foster and conserve forest sinks
	• Participated in environmental conservation efforts including tree-planting and forest
	conversation
	Engaged in efforts to recharge water sources and performed environmental education
	by utilizing corporate forests.
	Conducted demonstration tests of the mixed combustion of wood biomass in coal-fired
	thermal power plants utilizing unharnessed domestic forest resources (timber harvest
	residues), used paper made from tree thinnings for environmental reports, business
	cards, fans, boardwalk, etc., and utilized driftwood
Petroleum Association	(1) Efforts made in fiscal 2014
of Japan	Proactively engaged the development and dissemination of high-efficiency oil
	appliances (latent heat recovery-type oil water heater Eco-feel, high-efficiency
	commercial boilers, etc.) in order to promote global warming countermeasures in the
	household and commercial sectors, where petroleum products are used
	(2) Contribution through low-carbon products and services
	Promoted the introduction of biomass fuels
	• Improved fuel efficiency by developing sulfur-free fuels for use in vehicles
	Developed fuel-efficient engine oil.
	• Continued to make efforts to reduce waste generated from business operations and set
	up a "Industrial waste zero-emission" target unique to the industry.
	(3) Efforts leading to public campaigns
	Promoted environmental education activities
	• Implemented the Cool Biz and Warm Biz" campaigns.
	Saved electric power by dimming lights or taking out some fluorescent lights
	Conducted forest and Cotourne conservation activities
	(4) Efforts to factor and converse forest sinks
	(4) ETIORIS to Toster and Converse forest sinks
1	<ul> <li>Engaged in domestic forest conservation activities with local governments</li> </ul>

	• Engaged in tropical forest conservation projects and the Silk Road greening project overseas
	(5) Future efforts
	• In order to sell 1 million units of latent heat recovery-type oil water heater Eco-feel by
	fiscal 2020, cooperated with other industries to promote dissemination
The Japan Gas	(1) Reduction potential and performance in 2013
Association	• Advanced towards Gas Vision 2030 by promoting and disseminating cogeneration,
	establishing Ene-farm Partners, and supporting the development of human resources specializing in fuel conversion.
	(2) Contribution through low-carbon products and services
	Promoted the dissemination and expansion of natural gas cogeneration systems in the industrial and commercial and other costers
	Industrial and continential and other sectors.
	• In the nousehold sector, engaged in enorts to disseminate rule cens for households, gas
	engine-type water heaters, and latent heat recovery-type water heaters, as energy
	Savings in water heating, a large source of household energy consumption.
	(2) Effects leading to multiple encoding
	(3) Efforts leading to public campaigns
	dress code
	Conducted environmental education through lectures and awards; utilized
	environmental household account books
	• Implemented the "No My Car" campaign (refraining from driving one's own car to
	work); implemented "eco-drive" workshops
	Conducted environmental education through various events
	Implemented energy-saving diagnosis for households
	(4) Efforts to foster and conserve forest sinks
	Engaged in various afforestation and tree-planting activities in collaboration with local
	governments and NPOs

#### 3. Commercial and other sectors

Industry	Examples of cooperative efforts among interested parties
Japan Chain Stores Association	<ul> <li>(1) Contributions through low-carbon products and services</li> <li>Sold MSC-certified, ASC-certified, and FSC-certified private brand products</li> <li>Sold products that serve to reduce the use of air conditioning, such as bedding and thermal insulation curtains using material with chilling effects and moisture-absorbent heat-generating material, at all stores</li> <li>Sold toilet paper made from recycled paper (sales of 1.31 million packs during the past year) and LED light bulbs (sales of 326,000 bulbs during the past year)</li> <li>Promoted the sales of refill products, such as shampoos and body soaps, with less packaging. Also sold cooked foods in paper bags that impose less environmental burden</li> <li>Used domestic tree thinnings in private brand harusame bean-starch noodle soup containers (three items); newly sold a private brand hand soap (using recycled PET fiber, including those collected at stores</li> <li>Sold private brand carbon footprint and carbon offset products and environmentfriendly products jointly developed with customers</li> <li>Encouraged the unpackaged sales of vegetables and fruits in the fresh foods department and fried foods in the deli department. Continued to sell unpackaged fresh fish and meat and provision of non-tray items.</li> <li>353 stores stopped offering free plastic shopping bags. As a result, 81.7% of customers declined plastic bags (80.3% in fiscal 2013), and the number of plastic bags consumed was reduced by 1.007 billion bags, or 12.6% from fiscal 2013 level.</li> <li>107 stores stopped offering free plastic shopping bags. The ratio of customers with their own shopping bag increased from 70.1% to 72.3% collectively in all stores. Reduced the use of plastic bags to 92.8% of the previous fiscal year in fiscal 2014.</li> <li>Donated 3 yen per one customer declining plastic shopping bags to environmental</li> </ul>

	organizations and local governments.
	Awarded customers declining plastic shopping bags points at all stores. Number of
	plastic shopping bags declined: 23,652,206 bags; ratio of plastic shopping bags declines
	to total number of customers: 33.28%
	• Performed simple wrapping at 86 stores offering gift wrapping services. The wrapping
	paper consumed amounted to 86.9% of the previous year.
	• Encouraged customers to accept eco-wrapping (simple wrapping) for summer and year-
	end gifts ( <i>chugen</i> and <i>seibo</i> )
	Increased sales of liquids in two-liter PET bottles at room temperature
	Reduced the number of sales promotion monitors at 52 stores
	(2) Efforts leading to public campaigns
	• Invited employees to participate in the annual "Eco Challenge," involving a) energy
	savings during work (energy-saving use of lighting and air conditioning); b) energy savings at home (electric power saving, fuel-efficient driving, carrying portable
	shopping bags), etc.
	• Hosted eight environmental seminars given by external lecturers annually (150
	participants in fiscal 2014)
	Encouraged energy-saving resource-saving campaigns and Cool Biz and Warm Biz dress
	codes among all employees to make them more aware of electric power saving and waste segregation
	Implemented eco-learning programs for social studies excursions for elementary school
	students and workplace experiences for junior high school students at each store
	• Contributed to environmental education by distributing booklets on collecting
	recyclables at stores to elementary school students visiting stores
	Offered "environmental learning programs" for elementary school students at stores
	5164 neonle from 102 organizations participated in fiscal 2014
Janan I P Gas	(1) Efforts made in fiscal 2014
Association	• Engaged in efforts to promote and disseminate high-efficiency LP gas appliances
//5506/4//011	(residential fuel cells, high-efficiency water heaters, etc.)
	(2) Contribution through low-carbon products and services
	• Reduced CO2 emissions through solar cell sales and production
	Developed energy-saving products
	• Sold onergy saving products
	(2) Efforts loading to public comparisons
	• Participated in the "Lights Down" campaign
	Implemented an in house Eco Doint program and Eco Challenge campaign
	Conducted an anvironmental photo context
	Conducted an environmental photo contest     Performed outroach efforte addressing consumers through nowsletters
	· Performed outreach efforts on soving consumers through newsletters
	Performed outreach efforts on saving energy through environmental education
	addressing employees
	(4) Efforts to foster and conserve forest sinks
	Managed corporate forests, engaged in Satoyama conservation efforts and participated
	in creating and managing flower beds in parks
	• Promoted the planting of trees and other plants on factory premises and main office
	buildings
	• Conducted mangrove planting in the Philippines (equivalent to emission reductions of
	/1.5T-UU2)
	(TEHORIS Made in fiscal 2014
Companies	- cooperated with tenants to adjust air conditioning and lighting and visualize energy
Association of Japan	consumption
	Introduced MEMS In condominiums
	• Developed longer life buildings, utilized recycled material, promoted green
	procurement, reused existing building trames, promote energy savings in construction
	and demolition of buildings by utilizing energy-saving methods, construction machinery
	and venicies
	Cullized various environmental assessment tools, including CASBEE     (2) Could the thread because between the second asternational assessment tools and the second asternational assessment tools as the second asternational asternatindependent asternational asternational asternationasternationaetee
	(2) Contribution through low-carbon products and services

	• Introduced environmental indicators including PAL and ERR, for newly built office
	buildings, and promoted CO2 emission reductions at the management stage.
	(3) Efforts leading to public campaigns
	· Joined environmental events including the water sprinkling project and Lights Down
	campaign.
	Implemented Cool Biz and Warm Biz dress codes
	<ul> <li>Implemented various power saving measures</li> </ul>
	<ul> <li>Implemented educational activities for tenants and employees</li> </ul>
	<ul> <li>Conducted outreach activities addressing tenants and employees</li> </ul>
	(4) Efforts to foster and conserve forest sinks
	Promoted greening and conducted periodical conservation activities
	Planted local native tree species
	· Hosted events and invited the participation of employees, building users and local
	residents; establishing an eco-community organization
	Promoted the use of products with natural environment and biodiversity-related
	certification or appraisal
	Made donations to volunteer organizations, etc.
The Life Insurance	(1) Efforts made in fiscal 2014
Association of Japan	<ul> <li>Increased awareness of environmental issues among corporate executives through in- house educational programs</li> </ul>
	Communicated the status corporate activities addressing environmental issues on
	websites and in disclosure report
	<ul> <li>Visited elementary schools to give lectures on wetland nature and biodiversity</li> </ul>
	Hosted "A Classroom in the Forest" to teach children in elementary school the
	functions of a forest
	<ul> <li>Hosted "Forest Explorers," an event in which participants can experience forest</li> </ul>
	management operations in nature
	Provided funds for the Nationwide Environmental Children's Drawing Contest for
	Elementary and Junior High School Students
	<ul> <li>Had sales staff distribute leaflets introducing ways to save energy at home</li> </ul>
	(2) Efforts leading to public campaigns
	<ul> <li>Conducted afforestation and tree-planting activities and made donations to</li> </ul>
	environmental conservation organizations.
	<ul> <li>Supported volunteer activities by offering holidays and funds for volunteer work</li> </ul>
	Conducted outreach efforts addressing the residential sector by providing information
	on saving energy and offering opportunities to experience forest management
	(2) Efforts to factor and concentre forest sinks
	• While appropriate and conserve forest sinks
	tree planting and afferentation efforts and other companies supported environmental
	protection organizations and sent volunteers to participate in tree-planting efforts
	(A) Efforts to conserve the environment through life insurance husiness operations
	• Renovated huildings owned for investment nurnoses into environment-friendly
	huildings
	<ul> <li>Introduced preferential interest rates for companies involved in environmental</li> </ul>
	conservation
	Promoted the chift towards nanerless application documents and insurance policies
Telecommunications	(1) Efforts made in fiscal 2014
Carriers Association	• Five telecommunications-related organizations launched the Council for Ecology
Carriers Association	Guidelines for ICT and formulated guidelines for energy savings in ICT appliances
	Guidelines are reviewed annually
	(2) Contribution through low carbon products and services
	• Utilized ICT services to achieve higher afficiency in production activities, reducing the
	transportation of people and goods, and contributing to the reduction of people and goods.
	electric newer use and CO2 emissions
	Handemonted an environmental labelling program for ICT solutions
	Dromotod paperloss convices (switched from paper billing to web based billing) of the set of t
	cloud based operation manuals)
1	ciouu-based operation manuals).

	<ul> <li>Offered environment-friendly working environments, including "telework" which enables working from home, and "mobile work" which enables working outside the office.</li> <li>Conducted computation on network servers and integrated servers at a large data</li> </ul>
	center to achieve comprehensive reductions in electricity consumption
	Engaged in solar power business on company-owned idle land
	(3)3Rs and global warming countermeasures
	<ul> <li>[reduce] Promoted the reduction of paper use by employing internet billing services</li> <li>[reuse] Reused resources by promoting the reuse of telecommunication equipment and</li> </ul>
	trade-ins of cell phones
	• [recycle] Promoted the recycling of telecommunication equipment. With the cooperation of relevant companies, launched the Mobile Recycle Network to collect used cell phones, PHS phones, batteries and storage batteries at approximately 10,000
	shops hationwide specializing in cell phones. Recovered rare metals for reuse in
	(4) Efforts leading to public campaigns
	Collaborated with local residents, local governments and schools to conduct
	environmental cleanups
	families
	<ul> <li>Implemented campaigns to promote the recycling of mobile phones</li> </ul>
	Participated in Fun to Share and supported the efforts of individual employees
	• Encouraged Cool Biz and Warm Biz dress codes
	(5) Efforts to foster and conserve forest sinks
Jaman Franchise	Promoted afforestation and tree-planting activities at various locations     (1) Contribution through low cost on and web and convices
Japan Franchise	(1) Contribution through low-carbon products and services
Association	(1) Contribution through low carbon products and convices
Stores Association	• Environment-friendly taxi stands (offsetting the CO2 emitted in the first 2km driven
	from participating stores)
	• Carbon offset buses (offsetting the CO2 emitted from tours by asking customers to pay
	150 ven/dav)
	Sold environment-friendly products
Japan Association of	(1) Contribution through low-carbon products and services
Refrigerated	• Managed and maintained optimal storage temperatures to prevent the unnecessary
Warehouses	generation of energy in preserving the freshness of food products
	(2) Efforts leading to public campaigns
	Educated employed by encourage the acquisition of green management certification
Japan Foreign Trade	(1) Contribution through low-carbon products and services
Council, Inc.	<ul> <li>Implemented various energy-saving, environment-friendly and low environmental burden projects (BEMS pilot projects, diffusion of energy management systems harnessing IT, development of low-carbon condominiums, increased sales of steel products that ensure low environmental burden, lithium development project, lithiumion batteries project, development and sales of LED lighting and backlights, manufacturing bioethanol and biomass fuels, increased sales of bio-PET, etc.)</li> <li>Produced bioethanol and biodiesel, implemented a car-sharing program employing low fuel efficiency vehicles, expanded sales of biomass PET, etc.)</li> </ul>
	Mainstreamed logistics (promoted modal shifts, consolidated logistics hubs; introduced low energy cars, etc.)
	(2) Efforts leading to public campaigns
	• Educational efforts addressing employees; promoted eco-drive and the use of public
	transportation; engaged in tree-planting and greening efforts, etc.
	Offered tree-planting and greening activities for employee families and implemented
	the Environment-friendly Household Practice Campaign, etc.
	Promoted the use of environmental household account books
	Offered environmental lectures at universities and seminars for member companies,
1	etc.

	(3) Efforts to foster and conserve forest sinks
	Conserved corporate forests and joined hands with local governments to perform forest
	conservation
	• Promoted forest environment management through investment and participation in
	wood biomass power generation
	• Conducted tropical forest reforestation, mine greening, and ecosystem conservation
	activities in various countries overseas
	<ul> <li>Imported and sold environment-friendly products</li> </ul>
The General Insurance	(1) Contribution through low-carbon products and services
Association of Janan	• Offered automobile insurance discounts for automobiles with advanced environmental
	features: sold environment-friendly fire insurance
	• In the area of non-insurance products and services sold weather derivatives and
	investment trusts that invest in environment-friendly companies
	(2) Efforts leading to public campaigns
	• Implementation of a carbon offsetting mechanism that combines carbon-offsetting
	antions with insurance products and assident recognics convices
	Drovided environment friendly automobile incurance and fire incurance products using
	visible and insurance products using
	web-based insurance clauses
	• Implemented environmental outreach and education to raise awareness (help public
	workshops and seminars, held permanent exhibits on company premises, gave lectures
	at elementary schools, awarded elementary schools, participated in the Lights-Down
	campaign)
	Promoted green procurement
	Declared the "Eco-First Promise" to the Minister of the Environment
	<ul> <li>Implemented the Eco-safety Driving campaign</li> </ul>
	Participated in the Cool Biz and Warm Biz campaigns Implemented the Lights Down
	campaign.
	<ul> <li>Hosted public workshops and seminars on environmental issues</li> </ul>
	Utilized recycled products
	(3) Efforts to foster and conserve forest sinks
	· Engaged in various forest conservation activities (implementation of agreements
	concluded with local governments on forest management, forest conservation and
	silviculture in afforested areas, restoration of tropical forests and agricultural
	technology training in Indonesia, removal of introduced species and cleaning for the
	biodiversity conservation in wetlands)
	· Implemented projects in collaboration with NPOs to create environments friendly to
	living creatures
	• Donated profits gained through goods and services contributing to the reduction of
	environmental burden to the Green Belt campaign (tree-planting effort)
	• Made donations to projects encouraging the utilization of local wood in areas affected
	by the Great East Japan Earthquake
	• Planted mangrove forests in 9 countries, including in Southeast Asia and engaged in
	efforts to restore tropical forests in Indonesia
	Purchased I-VER credits from forest management projects
Jananese Bankers	(1) Efforts made in fiscal 2014
Association	• Engaged in efforts to moderate air conditioning temperatures to the extent possible
Association	reduced the amount of namer used in various services, offered environment-friendly
	products and services to individual clients, and promoted environment-friendly loans to
	support husiness operators practicing environment-friendly husiness management
	(2) Contribution through low-carbon products and services
	<ul> <li>Offered products that address global environmental issues (with the exception of leane)</li> </ul>
	and "no-passbook" savings account convices
	anu nu-passuouk savings account services
	for loops for low orninging webiclos
	IUI IUAIIS IUI IUW-EIIIISSIUI VEIIICIES
	Provided clients with information on environmental issues     (2) Effects localized to a hill account is
	(3) Efforts leading to public campaigns
	• Promoted energy-saving efforts (switching off lights when not in use, encouraging

	employees to work in casual clothing, removing unnecessary lighting and leaving some
	turned off, managing temperature settings of air conditioning equipment)
	<ul> <li>Conducted CSR activities addressing global environmental issues</li> </ul>
	Conducted in-house environmental education programs
	• Updated the "Japan Bankers Association eco map", a website providing environmental
	information. Hosted a wall newspaper competition for elementary school children.
	(4) Future efforts
	• Introduce loans that harness the Agency for Natural Resources and Energy's Energy Use
	Rationalization Business Support Program
	• Introduce loans that are eligible for the Ministry of the Environment's subsidized
	interest payments.
	Develop unique products based on environmental studies.
Japan Securities	(1) Efforts made in fiscal 2014
Dealers Association	• Promoted reduced paper use, saved electric power, introduced energy-saving
	appliances, implanted resource-saving and energy-saving measures
	• Promoted the reduction of environmental burden and the reuse of resources by using
	paper manufactured in processes with reduced environmental burden, ensuring
	segregated waste collection, etc.
	• Conducted environmental outreach by harnessing intra-company networks and in-
	house campaigns
	• Announced efforts to address environmental issues on website thus communicating
	efforts to investors and the entire society
	(2) Low-carbon products and services
	• Developed and sold funds addressing to global warming countermeasures and
	environmental protection and supported investment in companies promoting
	environmental husiness
	(3) Efforts leading to nublic campaigns
	Participated in social contribution efforts for environmental protection implemented by
	local communities and organizations
	Suggested ways to utilize information on efforts addressing environmental issues and
	investment ideas
	Particinated in the Earth Hour and Lights Down campaigns
	Aired commercials on anyironmental protection
	(4) Efforts to foster and conserve forests
	(4) Enores to roster and conserve rorests
	(5) Other efforts
	(J) Utilet entities
	as ISO14001

Industry	Examples of cooperative efforts among interested parties
The Japanese	(1) Efforts made in fiscal 2014
Shipowners'	• Based on requests by shippers seeking to reduce CO2 emissions, promoted CO2
Association	emission reductions by efficiently operating ships under close collaboration
	(2) Efforts leading to public campaigns
	<ul> <li>Implemented environmental education programs for employees.</li> </ul>
	<ul> <li>Implemented environmental conservation campaigns</li> </ul>
	<ul> <li>Provided cooperation and support for environmental surveys and research</li> </ul>
The Scheduled Airlines	(1) Efforts made in fiscal 2014
Association of Japan	• In light of shortening flight distance and duration, collaborated with domestic and overseas air traffic control authorities to introduce efficient flight methods and engage
	in "eco-flights" that will maximize CO2 emission reductions.
	(2) Contribution through low-carbon products and services
	Developed eco-tours linked with afforestation activities near airports and coral planting
	in Okinawa.

	Offered customer carbon offsetting programs
	<ul> <li>Introduced electric vehicles for use within airports</li> </ul>
	(3) Efforts leading to public campaigns
	• Implemented measures to lower window shades during parking to prevent internal
	temperatures from rising
	Gave environmental classes for children taught by pilots
	• Engaged in awareness-raising activities by posting environmental efforts made by the
	airline industry on the website
	(4) Efforts to foster and conserve forest sinks
	Conducted tree-planting activities around airports
	• Invited customers to give charity support to NGO-led forest protection in the Asia-Pacific
	region and coastal forest restoration in the Tohoku region of Japan
	(5) Other efforts
	• In order to enable the collection of CO2 concentration data on various aviation routes
	around the world, jointly developed a new instrument for the continuous measurement
	of CO2 concentration and installed the instrument on aircrafts used for international
	flights to conduct new atmospheric observations
	• Cooperated in reducing the adverse impacts of forest fire based on reports on forest
Jonon Trucking	The in Siberia, Alaska and Indonesia from flight attendants on operating flights
	(1) Contribution Infough low-carbon products and services
ASSOCIATION	volicion that have achieved the fiscal 2015 fuel economy standards
	Number of introduced vehicles meeting the fiscal 2015 fuel economy standards in
	2014* = 69.034 units
	*Model codes: TKG- TPG- SPG- OKG- OPG- LPG-
	(2) Efforts to foster and conserve forest sinks
	• Designate a piece of land covering approximately 1 ha to implement the "Forest
	Creation by Trucks" program.
Japan Federation of	(1) Efforts made in fiscal 2014
Coastal Shipping	• Promoted a modal shift from transporting cargo over long distances over land to more
Associations	energy-efficient surface transport to reduce CO2 emissions from the transportation
	sector as a whole
	(2) Contributions through low-carbon products and services
	• Engaged in awareness-raising activities by using pamphlets targeted at the shipper
	industry and advocated the current status of coastal shipping and its advantages in
	terms of energy efficiency.
	(2) Efforts leading to public campaigns
	Distributed material at local "Marine Festivals" to raise public awareness that coastal shipping is a second solution means of transport by
The Association of	(1) Efforte made in fiscal 2014
Ine Association of	(1) ETIORS made in riscal 2014
Pailwayc	environmental iscues
Naliways	(2) Contribution through low-carbon products and services
	• Implemented the "Take the train to be eco-friendly" campaign.
	Formulated "Environmental Accounting Guidelines for Private Railway Businesses" and
	introduced environmental accounting based on these guidelines
	<ul> <li>Implemented environmental education programs for employees.</li> </ul>
	Sold carbon-offsetting train tickets
	• Installed screens displaying the amount to electricity generated and used at a station.
	Built parking lots for vehicles and bicycles close to the station.
	(3) Efforts to foster and conserve forest sinks
	• Promoted Satoyama conservation and afforestation by cooperating with local
	governments in managing company-owned Satoyama and performing tree thinning
	operations, as well as participating in tree planting activities along railway lines
	Promoted greening activities, including covering the outer walls of stations and track
	grades with vegetation and trees, not only for environmental conservation but for
	beautification
	(4) Future efforts

	Continue efforts to promote railway use and increase environmental consciousness
All Japan Freight	(1) Efforts made in fiscal 2014
Forwarders	<ul> <li>Participated in various events, including the New Environmental Exposition, to</li> </ul>
Association	encourage the public to reduce CO2 emissions through a modal shift to rail freight
	transport.
	<ul> <li>Also implemented a rail freight transport trial campaign to promote modal shifts.</li> </ul>
	(2) Contribution through low-carbon products and services
	<ul> <li>Promoted modal shifts from other means of transport to rail freight transport</li> </ul>
	(3) Efforts leading to public campaigns
	Participated in environmental expositions, including Logis-Tech Tokyo (Tokyo), the
	Eco-Technology Exhibition (Kita Kyushu), and Messe Nagoya (Nagoya)

### Examples of efforts to promote international contribution by participating industries

Industry	Efforts to promote international contribution
The Japan Iron and Steel Foundation	<ul> <li>Engaged in efforts towards resuming the Japan-China Steel Industry Environmental Protection and Energy Conservation Technology Conference that has been suspended since 2011</li> <li>Conducted steel plant diagnoses at 7 steel plants in India and ASEAN countries by harnessing ISO14404, an international standard for CO2 emission calculation methods formulated under Japanese initiative in March 2013.</li> <li>Hosted the Fourth Public and Private Collaborative Meeting between the Indian and Japanese Iron and Steel Industry to consider ways to promote energy savings by introducing Japanese technology in India, where the iron and steel industry is growing substantially</li> <li>Held the Japan-ASEAN Public and Private Collaborative Meeting on Iron and Steel with the 6 ASEAN countries and share information on support measures for introduction energy-saving technology in the ASEAN region.</li> <li>Introduced the energy-saving experiences and innovative technology development of the Japanese iron and steel industry at the GSEP Iron and Steel Working Group meeting.</li> </ul>
Japan Chemical Industry Association	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Contributed to GHG emission reductions in Asia, the Middle East and North Africa, Russia, Europe and North America through a wide range of manufacturing technologies, material and products, and the detoxification of HFCs, PFCs and SF6.</li> <li>a. Examples of contribution in manufacturing processes</li> <li>Poultry feed additive manufacturing technologies (target: world)</li> <li>Graphite and carbon electrodes (poles) manufacturing technologies (target: US)</li> <li>Solvent thinner and stripping solution manufacturing methods (targets: North America, China)</li> <li>Synthetic rubber manufacturing technologies for energy-saving tires (target: Asia)</li> <li>Polyester recycling (target: China)</li> <li>Automatic coke oven heating systems (target: China)</li> <li>Non-woven fabric manufacturing technologies for energy-saving tires (target: world)</li> <li>Synthetic rubber manufacturing technologies (target: world)</li> <li>Non-woven fabric manufacturing technologies (target: world)</li> <li>Synthetic rubber manufacturing technologies (target: world)</li> <li>Viscosity index improvers for engine oil (target: Asia)</li> <li>Solar control film for laminated windshield glass (target: world)</li> <li>Rare earth magnetic alloys (target: China)</li> <li>Bulk molding compound [engine sealing application] (targets: China, Thailand)</li> <li>Aluminum hammered products (target: Asia)</li> <li>Graphite and carbon electrodes (poles) manufacturing technologies (target: world)</li> <li>CFRP[carbon fiber reinforced plastics] carbon fiber for aircrafts (target: world)</li> <li>CFRP[carbon fiber reinforced plastics] carbon fiber for aircrafts (target: world)</li> <li>RO membranes for the desalination of seawater (target: world)</li> <li>CFRP[carbon fiber reinforced plastics] carbo</li></ul>
	<ul> <li>RO membranes for the desalination of seawater (target: world)</li> <li>Thin paper diapers (target: world)</li> <li>Heat-resistant piping parts, parts for piping and coupling parts (target: US, Europe)</li> <li>Resin window frame parts (target: US, Europe)</li> <li>Secondary battery parts for electric vehicles [heat-resistant separator] (target: US, Europe)</li> <li>Material for lithium ion batteries (target: world)</li> <li>Material for semiconductor manufacturing (target: world)</li> </ul>

### 1. Industrial Sector

	<ul> <li>Material for I</li> </ul>	iquid crystal manufacturing (target	: world)
Japan Paper	(1) International c	ontribution in water environmenta	l technologies
Association	• The pulp and paper industry has developed supported by water resources.		
	Accumulated at	forestation efforts, technologies re	elated to water recharge and water
	resource utiliza	tion, and technologies related to v	vaste water treatment and reuse in
	water-intensive	paper manufacturing, in Japan and	l overseas.
	In order to harn	ess such technologies related to wa	ater business one member company
	established the	Water Environment Research La	boratory which will contribute to
	water-related in	a water Environment Research E	ster supply and sewerage systems
	and the treat	and of waste water from factor	ios offluont from industrial waste
	treatment proc	ient of waste water from factor	les, endent nom muustnar waste
		esses, livestock enfuent, and agricu	intural imgation water in Japan, Asia,
	Oceania, and So	Suth and North America.)	
Japan Cement	(1) Efforts made in	i fiscal 2014	
Association	Disclosed infor	mation to an overseas audience v	ia websites regarding the status of
	energy consum	ption for cement production, the s	status of energy saving technologies
	(facilities), the	status of using waste as alternati	ives to energy, the status of waste
	utilization.		
	(2) Efforts to mitig	ate and reduce emissions in develo	ping countries
	<ul> <li>Efforts by indivi</li> </ul>	dual companies	
	Energy-saving a	nd environmental engineering proj	ects in China
	(3) Activities at int	ernational conferences	
	Cooperated in f	ormulating an international tool for	r calculating CO2 emissions from the
	cement industr	/	
Liaison Group of	(1) Provision low-	carbon product and services	
Japanese Electrical	Converted energy	gy sources in pursuing global bus	siness expansion and provided low-
and Electronics	carbon energy-	saving products (services) to the	household and commercial sectors.
Industries for Global	thus contribution	ng to both the preventing global w	varming and achieving a low-carbon
Warming Prevention	society at a glo	bal level and the achievement of a	low carbon society in terms of both
Warning Frevencion	energy supply a	nd demand.	
			Avoided emissions
		•Avoided emissions	Cumulative avoided emissions
	Categories of	emissions avoided due to newly	during total years of operation
	target	installed or shipped products in	(use) of products newly installed
	products	fiscal 2014 (one year)	or shipped in fiscal 2014 (one
			vear)
	Power		, ,
	generation	4,480,000t-CO2	152,460,000 t-CO2
	Selleration		9,470,000+-002
	Household	050 000+ 002	[*2 800 000t CO2 attributable to
	appliances	950,0001-002	
	ICT products	5 740 0000 000	28,700,000t-CO2
	and	5,740,000t-CO2	[* 3,890,000t-CO2 attributable
	solutions		to parts]
	(2) International	cooperation for the dissemination	n of low-carbon and energy-saving
	products		
	<ul> <li>Participated in i</li> </ul>	nternational frameworks that consi-	der methods to introduce policies for
	the disseminati	on of high-efficiency equipment ar	nd to appropriately evaluate energy-
	saving perform	ance. Promoted proactive propos	als and positive approaches as an
	industry.		
	(4) Efforts to contr	ol and reduce emissions in develop	ping countries
	• Given the Japar	ese government's proposal of intro	oducing a Joint Crediting Mechanism
	(JCM)/Bilateral	Offset Credit Mechanism (BOCM)	in the Asian region, evaluated and
	announced the	feasibility of possible global warm	ing countermeasures to be taken in
	developing cour	ntries by the industry for its adoption	on.
	(4) Future efforts		-
	• While the Com	nitment to a Low Carbon Society i	s in effect announce the estimated
	avoided emission	and a cow carbon society in a second target a	roducts covered by the calculation
	mothed and rea	vise the method as required	Touces covered by the calculation
	methou and rev	nse me memou as required.	

r.

Japan Federation of	(1) Efforts made in fiscal 2014
Construction	Submitted a paper on "global warming strategies adopted during the construction
Contractors	phase" to the American Society of Civil Engineers
	· Considered the overseas expansion of fuel-saving driving of dump trucks and
	construction machinery (issued English translations material on fuel-efficient driving,
	etc.)
Janan Automohile	(1) Efforts made in fiscal 2014
Manufacturers	Promoted energy savings at members' overseas production facilities and ensured
Association Inc. (IAMA)	improvements in energy intensity
Association, Inc. (JAIVIA)	Inprovements in energy intensity
Japan Auto-Bouy	• Introduced wind and solar power generation systems, promoted the replacement of
Industries Association,	diesel-powered systems with natural gas cogeneration, dispatched energy efficiency
INC. (JABIA)	diagnosis teams to overseas facilities, promoted energy-saving efforts at
	manufacturing plants, reduced the air pressure when not in use, implemented the 3-
	wet painting system which does not require a middle coat
	(2) Activities at international conferences
	<ul> <li>Provided support for the The International Conference On Global Environment,</li> </ul>
	Carbon Reduction, And Eco-Drive: As A Solution Towards Sustainability hosted by UN
	WAFUNIF. JAMA stressed and explained the importance of eco-drive as a part of
	comprehensive measures for CO2 emission reductions.
	• Participated in the World Forum for the Harmonization of Vehicle Regulations (WP29)
	(3) International contribution using environmental technology and know-how to counter
	air and water pollution
	• Reused more than 90% of waste water and prevented the depletion of groundwater
	Cooperated with cement manufacturers to recycle paint sludge and sewage sludge
	from painting and waste water treatment processes into cement (India)
	Advanced technologies for reducing VOC emissions from the painting process
	(developed low VOC pointe) and introduced them to everyoes plants
	(developed low-voc paints) and introduced them to overseas plants.
	communicated technologies to reduce voc emissions by reconsidering the timmers
	employed in the painting equipment
	• Prevented air pollution by introducing deodorizing equipment (Inaliand, China,
	Mexico)
	Acquired ISO14001 certification in all global business units.
	Introduced low-VOC paints in the painting process, introduced new treatment
	equipment for VOC reduction
	• Introduced deodorizing equipment in relation with air pollution
	(4) Future efforts
	Continue past efforts
Japan Federation of	(1) Efforts made in fiscal 2014
Housing Organizations	Participated in the International Housing Association (IHA) Annual Meeting and
	exchanged information on environmental issues, etc. with member countries
	(2) Efforts to control and reduce emission in developing countries
	Communicated information to willing developing countries on Japan's advanced
	housing production technologies in accordance with local circumstances
	• Provided low-carbon and energy-saving technologies and considered dispatching the
	appropriate experts for their promotion
	• Engaged in overseas afforestation activities as each company expanded their business
	overseas, with an aim to improve the livelihood of local citizens
Japan Mining Industry	(1) Efforts made in fiscal 2014
Association	• Constructed a 4500KW off-grid hydroelectric generating plant at the Huanzala Mine in
	Peru in 1986 and supplies approximately 400KW to the local community free of cost
	Uses the electricity in mining and ore processing. In fiscal 2014, reduced CO2 emissions
	by 14, 224t appually
	<ul> <li>In 2007, connected to the national grid to establish a system enabling the nurchase of</li> </ul>
	aloctric nower from the grid during the dry coscen in times of newer shorters, due to
	water level declines
	water level declines.
	• Constructed a 1000kw hydroelectric plant to replace diesel generators at the Palica
1	ivine in Peru. In fiscal 2014, reduced CO2 emissions by 46t annually.

	In October 2012, started electric power generation at a waste treatment facility in
	Thailand utilizing excess steam from a waste heat boiler. In fiscal 2014, reduced CO2
	emissions by approximately 3100t.
	(2) Efforts to control and reduce emissions in developing countries
	· Introduced an operature aving nickel refining process. HPAL (High Prossure Acid Leach)
	and low quality riskel suide are treatment at two locations in the Dhilippines
	and low-quality nickel oxide ore treatment at two locations in the Philippines.
	Furthermore, conducted efforts to restore land developed for refining projects to its
	natural state.
	Sought to save power and energy and reduce environmental burden in copper refining
	Educated local people about pursuing energy-saving low-carbon goals by transferring
	copper foil manufacturing technologies in Taiwan and metal recycling technologies in
	Shanghai, China.
	(3) Activities at international conferences
	• At a meeting hosted by the International Council on Mining and Metals (ICMM),
	delivered a presentation on the status of resource acquisition and CO2 emissions, and
	exchanged opinions.
	(4) International contribution employing environmental technologies and know-how to
	solve air and water pollution and other pollution issues
	Implemented precious metals recovery projects, home appliances recycling projects
	and industrial wasta treatment projects, thus contributing to appliances
	and industrial waste treatment projects, thus contributing to environmental
	(5) Future enorts
	• Continue to survey energy consumption at overseas mines and propose energy-saving
	solutions using state-of-the-art energy-saving technologies.
	• Contribute to environmental conservation using state-of-the-art environmental
	technologies
	Consider the introduction of a Joint Crediting Mechanism (JCM)/ Bilateral Offset
	Credit Mechanism (BOCM) for overseas CO2 emission reductions
Lime Manufacturing	(1) Activities at international conferences
Association	Compared the energy efficiency of Japan's lime manufacturing processes and relevant
	CO2 emissions and joined the International Lime Association to seek new global
	warming prevention-related technologies and continued to exchange information. At
	the annual meeting of the International Lime Association, 3 Japanese companies
	introduced good energy-saving practices in lime manufacturing
Japan Rubber	(1) Efforts made in fiscal 2014
Manufacturers	Transferred energy-saving production technologies (cogeneration systems, high-
Association	efficiency production facilities, know-how on production) overseas
	Increased overseas production and sales of energy-saving products (high fuel efficiency
	tires, energy-saving belts, products for insulation, etc.)
	(2) Efforts to control and reduce emissions in developing countries
	• Contributed by performing high-efficiency production at local plants and disseminating
	energy-saving products as provided in (1)
	(3) International contribution employing environmental technologies and know-how to
	solve air and water nollution and other nollution issues
	• Engaged in efforts to reduce environmental burden in the ELL etc.
	(4) Euture offerte
	(4) ruture enorts
	resting and energy soving products, promote a time labeling scheme for the
	practices and energy-saving products; promote a tire labeling scheme for the
The Feelenster of	dissemination of such products
The Federation of	(1) Efforts made in fiscal 2014
Pharmaceutical	Japan leads the world in reducing the use of HFCs in metered dose inhalation aerosols
Manufacturers	and can contribute to global GHG emission reductions by introducing relevant
Associations of Japan	technologies overseas
	• In accordance with the globalization of the pharmaceuticals market, overseas
	production of pharmaceuticals is expected to increase. Contribute to reducing
	environmental burden and energy consumption overseas by introducing the most
	advanced domestic pharmaceutical manufacturing technologies.

Flat Glass	(1) Efforts made in fiscal 2014
Manufacturers	Introduced CO2-reducing production technologies, including the total oxygen
Association of Japan	combustion method (reducing CO2 emissions by around 25%) developed in Japan,
	overseas (China, Europe) in order to contribute to global CO2 reductions.
Japan Federation of	(1) Efforts made in fiscal 2014
Printing Industries	· Promoted information exchange, including introducing energy-saving efforts at the
	World Printing Congress, the Forum of Asian Graphic Arts Technologies (FAGAT), etc.
	<ul> <li>Standardized deinked pulp at ISO/TC130 WG11 (environment)</li> </ul>
	(2) Efforts to control and reduce emissions in developing countries
	Conducted tree-planting activities in Vietnam
	(3) Activities at international conferences
	<ul> <li>Introduced environmental and paper recycling efforts at the World Printers &amp;</li> </ul>
	Communication Forum (June 2015, Portugal) and exchanged opinions
	(4) Future efforts
	Continue to exchange opinions on the environment at international conferences Forum
	of Asian Graphic Arts Technologies, etc.
	Considered the development of ISO standards for paper recycling and deinking
Japan Aluminium	(1) Efforts made in fiscal 2014
Association	· Communicated information on reducing environmental burden through the use of
	aluminum products via websites, etc. in cooperation with the International Aluminium
	Institute (IAI), The Aluminum Association of the US, the European Aluminum
	Association, etc.
	(2) Efforts to control and reduce emissions in developing countries
	Implemented environment-friendly business management practices fostered in Japan
	at overseas locations
	(3) Activities at international conferences
	<ul> <li>Exchanged information at meetings of the IAI and introduced best practices</li> </ul>
	Introduced new state-of-the-art aluminum recycling processes developed in Japan at
	the Aluminum Forum hosted by the China Nonferrous Metals Industry Association
	• Introduced the JIS standards for aluminum dross for iron and steel. Supported the
	reduction of aluminum dross quantities of final disposal
Brewers Association of	(1) Efforts made in fiscal 2014
Japan	<ul> <li>Initiated measurements of Scope 3 emissions at overseas group affiliates</li> </ul>
	· Implemented an energy saving diagnosis at a brewery in Brazil employing Japanese
	(Agency for Natural Resources and Energy) subsidies
	(2) International contribution employing environmental technologies and know-how to
	solve air and water pollution and other pollution issues
	Developed technologies to extract bioethanol
	· Cooperated in a project to support the establishment of a pollution control
	management(PCM) system in Vietnam and hosted environmental training programs for
	Vietnamese engineers at factories in Japan.
	(3) Future efforts
	Accept additional requests to support the development of a Vietnamese PCM systems
The Japanese Electric	(1) Efforts made in fiscal 2014
Wire & Cable Makers'	Promoted the Japan-led development of an IEC standard for the conductor size of the
Association	optimal electric wire and cable.
	• The Japan Atomic Energy Agency received an order for approximately 30 tons of
	superconductive cable for the ITER (International Thermonuclear Experimental
	Reactor) under construction in France. Deliveries will be made in February to October
	2015.
	(2) Efforts to control and reduce emissions in developing countries
	Promoted the development of high-temperature superconductive cables enabling the
	reduction of transmission loss and massive transmissions for use in developing electric
	power grids in developing countries
	(3) Future efforts
	$\boldsymbol{\cdot}$ Continue to promote the development of an IEC standard for the conductor size of the
	optimal electric wire and cable. Also compile an English pamphlet.

	• Installed a high temperature superconductive cable system developed in Japan in a pilot
	test implemented by the US Department of Energy for the practical application of the
	Grid2030 concept of developing an superconductive transmission cable network
	covering the entire North American continent by 2030. Accelerated the development
	of superconductive transmission networks
Janan Conner and	(1) Efforts made in fiscal 2014
Brass Association	• Installed state of the art operation facilities and technologies in new overseas
DIASS ASSOCIATION	anorations
	operations
	(2) International contribution employing environmental technologies and know-now to
	solve air and water pollution and other pollution issues
	• Installed state-of-the-art energy-saving facilities and technologies in new overseas
	operations
Japan Bearing	(1) Efforts made in fiscal 2014
Industrial Association	Installed inverter control in compressors
	<ul> <li>Installed timers in air conditioning equipment</li> </ul>
	<ul> <li>Replaced existing lighting to LEDs</li> </ul>
	(2) International contribution employing environmental technologies and know-how to
	solve air and water pollution and other pollution issues
	· Recycled wastewater from factories in Thailand and China to the maximum extent
	possible with the aim of operating zero-wastewater discharge factories
Japan Soft Drink	(1) Past efforts
Association	• Provided support for the introduction of lightweight PET bottles in the French soft drink
	business.
	• Compiled a database on environmental data regarding overseas affiliates and
	established a support system for CO2 emission reductions
	Supported a Sri Lankan tea plantation in acquiring Rainforest Alliance certification
	• Shared energy- and water-saying technologies developed in Japan to support the
	reduction of environmental burden in Asia where shifts to multiproduct manufacturing
	are occurring
Japan Machina Taol	(1) Efforts made in firsal 2014
Japan Machine 1001	(1) Ellorits made in liscal 2014
Builders Association	Machine tools manufactured in Japan feature world-class machining performance and
	efficiency and contribute to achieving higher efficiency in overseas factories.
	Contributed to reducing CO2 emissions overseas by disseminating high environmental
	performance Japanese machine tools.
The Shipbuilders'	(1) Efforts made in fiscal 2014
Association of Japan	Constructed energy-saving ships, including new bulk carriers reducing CO2 emissions by
and the Cooperative	27% compared to conventional levels
Association of Japan	<ul> <li>Continued development of energy-saving tankers</li> </ul>
Shipbuilders	(2) Efforts to control and reduce emissions in developing countries
	Abided by regulatory targets for air and water quality and reduced CO2 emissions at
	overseas plants.
	• Implemented integrated diesel and biomass-fired power generation projects covering
	engineering, construction, operation and maintenance
	(3) Activities at international conferences
	• Proactively participated in CO2 emission reduction efforts under the International
	Maritime Organization (IMO) and the International Standardization Organization (ISO)
	as a member of the Japanese delegation
	(A) International contribution amploying environmental technologies and know how to
	(4) memational contribution and other pollution issues
	solve air and water poliution and other poliution issues
	• Promoted the prevention of pollution and global warming through products and
	services based on green innovation activities
	Made international contributions by selling environment-friendly products, including
	wastewater treatment equipment, desulfurization and denitrification equipment and
	bag filters.
	<ul> <li>Implemented measures to reduce CO2 emissions from ships</li> </ul>
	Performed business operations towards the installation of ballast water management
	equipment

	• Developed large-scale diesel engines for ships in light of IMO's upcoming Tier III
	requirements for NOx emissions
	(5) Future efforts
	· Continue development of environment-friendly ships to reduce CO2 emissions from
	international maritime transport.
Japan Industrial	(1) Efforts made in fiscal 2014
Vehicles Association	• Introduced potentiometers in electric induction furnaces in overseas parts
	manufacturing plants and reduced electric power consumption by 5.1% per 1t of
	dissolved iron
	(2) Activities at international conferences
	• In ISO/TC110 (industrial vehicles), participated in international discussions on
	formulating an international standard on measurement methods for the fuel economy
	of industrial vehicles that will lead to the visualization of energy savings.
	• In IEC/TC105/WG6 (Fuel cell system for propulsion and auxiliary power units), led the
	formulation of standards for methods to test the safety and performance of fuel cell
	systems for industrial vehicles including forklifts.
	(3) Future efforts
	• Continue to make efforts to disseminate technologies and products meeting strict
	domestic environmental regulations overseas
Japan Association of	(1) Efforts made in fiscal 2014
Rolling Stock	• Contributed to the achievement of modal shifts in other countries by exporting rolling
Industries	stock
	<ul> <li>Exported rolling stock using lightweight aluminum alloys</li> </ul>
	• Launched the "Eco Challenge for a Greener Tomorrow" campaign in 2010 targeted at
	US and EU
	• Launched environmental communications with China in 2012, in line with those with
	the US and EU
	(2) Efforts to control and reduce emissions in developing countries
	Engaged in mangrove conservation and afforestation activities in Thailand
	<ul> <li>Performed tree-planting activities in China</li> </ul>
	(3) Future efforts
	<ul> <li>Transport lightweight stainless steel rolling stock to Thailand</li> </ul>
	• Contribute to CO2 emission reductions in other countries by exporting environment-
	friendly rolling stock
Japan Petroleum	(1) Efforts to control and reduce emissions in developing countries
Development	• In petroleum and natural gas development projects, implemented GHG reduction
Association	measures (utilization of associated gas, injection of associated gas utilization of waste
	heat, afforestation, reduction of diffuse gas, reduction of residual gas through
	combustion (reuse)) in conformity with standards of the host country and region and
	partner companies.
	(2) Activities at international conferences
	Participated in and cooperated with IEA-GHG, an international research and
	development program on CO2 capture and storage (CCS) technologies.
	• Participated in and cooperated with the Global CCS Institute, an organization led by the
	Australian government to promote CCS demonstration projects.
	(3) International contribution employing environmental technologies and know-how to
	solve air and water pollution and other pollution issues
	• In accordance with environmental standards of oil producing countries and HSE
	management standards of partner companies, engaged in various efforts
	(improvements in water quality, biodiversity conservation, promotion of recycling,
	introducing energy-saving equipment, etc.)
	Conducted tree-planting activities in UAE, Indonesia and Australia, etc.

# 2. Energy Conversion Sector

Industry	Efforts to promote international contribution
The Federation of Electric Power Companies of Japan	<ul> <li>(1) Efforts to mitigate and reduce emissions in developing countries <ul> <li>a. Participated in the Global Superior Energy Performance Partnership(GSEP)</li> <li>GSEP comprises 6 working groups, of which the Power WG aims to contribute to promoting energy savings and achieving CO2 emission reductions at a global level through proposals for improvements in operation and maintenance technologies that serve to improve heat efficiency at coal-fired thermal power plants and the sharing of advanced technologies and know-how in power generation, transmission and distribution.</li> <li>In a workshop aiming to share information on best practices regarding power transmission and distribution and demand management technologies, actively exchanged ideas by taking full advantage of public-private cooperation and visiting overseas thermal power plants to peer reviews on operation and distribution and demand management technologies based on seminars on power transmission and distribution and demand management technologies and facility diagnosis and analysis of operational data, conducted mainly by Japanese power generation engineers.</li> <li>Will continue to support the decarbonization of developing countries by transferring and providing Japanese electric power-related technologies under GSEP, which embodies the Japan-led sectoral approach.</li> <li>b. Efforts related to overseas business operations</li> <li>Conducted feasibility studies and demonstration projects under the Joint Crediting Mechanism (JCM)/ Bilateral Offset Credit Mechanism (BOCM) and participated and cooperated in other overseas projects in order to engage in efforts to save energy and reduce CO2 emissions</li> </ul> </li> </ul>
Detroloum Accessition	reduce CO2 emissions.
of Japan	<ul> <li>(1) Enors made in fiscal 2014</li> <li>The petroleum industry, in collaboration with the Japan Cooperation Center, Petroleum (JCCP) and other relative organizations, engaged in petroleum-related technological cooperation, including energy saving, air and water conservation, waste management, etc., with oil producing countries and Asian countries by continuously dispatching technicians and accepting trainees.</li> <li>In fiscal 2014, implemented projects with Middle East oil producers, Vietnam and China, to dispatch experts, accept trainees, improve infrastructure and conduct joint research, and host the Joint GCC-Japan Environment Symposium.</li> <li>(2) Efforts to control and reduce emissions in developing countries</li> <li>Engaged in petroleum-related technological cooperation in the areas of energy saving, air and water conservation, waste management, etc., with oil-producing countries and Asian countries by continuously dispatching technicians and accepting trainees via relevant organizations.</li> <li>(3) Activities at international conferences</li> <li>A member of the International Petroleum Industry Environmental Conservation Association (IPIECA), which addresses environmental issues challenging the petroleum industry, the Petroleum Association of Japan attends relevant international conferences.</li> <li>In terms of global warming countermeasures, participated in conferences and workshops hosted by the IPIECA to introduce efforts including the Commitment to a Low Carbon Society formulated by the Japanese petroleum industry to counter global warming and to exchange views on measures taken by the petroleum industry in each country.</li> <li>(4) International contribution employing environmental technologies and know-how to solve air and water pollution and other pollution issues</li> </ul>

	further understanding of the issue.
The Japan Gas	(1) Efforts made in fiscal 2014
Association	• For industrial clients in Southeast Asia, implemented fuel conversion energy services,
	energy-related projects and accompanying studies, development and investment
	Provided energy services that enable the introduction of natural gas equipment without
	making initial investments and solely by paying fees determined in accordance with
	energy consumption
	• Participated in meetings of the International Gas Union (IGU) and the World Business
	Council for Sustainable Development (WBCSD) to discuss ways to properly assess the
	environmental advantages of city gas.
	• In China, verifying the effects of activated carbon fibers (ACF) in cleaning air pollution
	(2) Efforts to control and reduce emissions in developing countries
	Engaged in technology transfer and exchange regarding the effective use of natural gas
	and environmental improvement in developing countries. Implemented projects in
	Singapore and Thailand.
	Provided support for the development of human resources that will lead city gas
	businesses contributing to the global environment as well as businesses
	(3) Activities at international conferences
	Participated in the following international conferences and discussed ways to properly
	assess the environmental advantages of city gas
	<international (igu)="" gas="" union=""></international>
	Held two PGCA (sustainability) meetings and reported to the Executive Committee and
	Coordination Committee of the International Gas Union (IGU)
	• Compiled the four reports (Environment Reports on CCS, biogas, LCA and shale gas) to
	be presented and reported at the World Gas Conference 2015
	Reviewed papers for the World Gas Conference
	Planned a session at the World Gas Conference
	Participated in the Environment Committee (PGCA)
	Participated in the Working Group on "Life Cycle Assessment of LNG" held in Finland
	and Russia in 2014. The WG conducts LCAs of pipeline gas and LNG from production to
	consumption
	<ul> <li>World Business Council for Sustainable Development (WBCSD)&gt;</li> <li>Derticinated in the Energy and Climate ductor and other meetings at the annual Council</li> </ul>
	• Participated in the Energy and Climate cluster and other meetings at the annual Council Member Meeting held in Atlanta, U.S. (Nevember 2014) and chared information on
	husiness methodology, including sorbon prices and commercializing CCS
	(4) International contribution employing environmental technologies and know how to
	(4) International contribution employing environmental technologies and know-now to
	• Used carbon material technologies to clean the air
	In order to purify NOv emissions from holler and automobile exhaust gas used activated
	carbon fiber (ACE) to develop an air cleaning technology using only airflow and no
	electric power at atmospheric temperatures of $0.40^{\circ}$ C to remove only NOx. Verifying
	the effects of ACF in the Chinese atmospheric environment.
	(5) Future efforts
	• Scheduled to initiate feasibility surveys for an energy solution project with
	PetroVietnam
	• Scheduled to build a local representative office of Tokyo Gas Asia in Thailand by the end
	of 2015. Will contribute to building energy solutions in factories and commercial
	establishments and energy infrastructure in Thailand.
	• Will participate in the St Charles natural gas-fired thermal power generation project
	under construction in Maryland in the U.S Will contribute to electric power supply in
	the D.C. area through natural gas-fired thermal power generation (high-efficiency
	combined cycle with 58% energy efficiency)
	• Will install a 32MW gas turbine cogeneration system using natural gas (16MW×2;
	equipped with reheating boiler) and supply electric power and steam.

Г

# 3. Commercial and Other Sectors

Industry	Efforts to promote international contribution
Japan Chain Stores Association	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Member companies endeavored to introduce low energy consumption equipment, including LED lighting, when opening new overseas stores</li> </ul>
Japan LP Gas Association	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Participated in the World LPG Association (WLPGA) and introduced Japan's high- efficiency LPG equipment and state-of-the-art automobile technologies (combined combustion of liquid fuels in diesel engines) at international conferences.</li> <li>Collected PET bottle caps to provide vaccination to children around the world.</li> <li>(2) Activities at international conferences</li> <li>Hosted symposiums. Hosted lectures given by research fellows from group affiliates on the scenario planning conducted at group affiliates.</li> </ul>
The Real Estate Companies Association of Japan	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Proactively acquired environmental certification by promoting energy savings and decarbonization in buildings and condominiums when engaging in urban development projects abroad.</li> <li>Engaged in periodical efforts to plant and conserve forests overseas.</li> </ul>
The Life Insurance Association of Japan	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Participated in the UN Global Compact</li> <li>Implemented a coral reef conservation project in Fiji.</li> <li>Held a Global Volunteer Day, involving all group affiliates.</li> <li>Participated in Ramsar site conservation efforts.</li> <li>Participated in (signed to) CDP (Carbon Disclosure Project)</li> </ul>
Telecommunications Carriers Association	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>The ICT Ecological Guideline Council, composed of telecommunications operators and vendors, has been engaged in formulating international standards for telecommunications equipment that will serve to reduce CO2 emissions.</li> <li>In fiscal 2013, proposed energy efficiency metrics and measurement methods for packet optical networking platforms (telecommunication devices with both packet and TDM functions) to the International Telecommunication Union Telecommunication Standardization Sector (ITU-T) SG5. A revision of "Recommendation ITU-T L.1310: Energy efficiency metrics and measurement methods for telecommunication equipment" including the newly added Chapter 14 on packet optical networking systems, was issued on August 22, 2014.</li> <li>(2) Efforts to control and reduce emission in developing countries</li> <li>Under the Global Warming Mitigation Technology Promotion Project for which the Ministry of Economy, Trade and Industry publicly called for proposal seeking to reduce GHG emissions by increasing mobile phone base stations (efficiently utilizing "three electric power sources," namely solar power, fuel cells, and conventional commercial power) in Indonesia, was adopted. In November 2014, invited people engaged in telecommunications and others in construction from Indonesia to seminars and visits to base stations in order to further understanding about base station technologies.</li> <li>(3) Activities at international conferences</li> <li>Through efforts towards the international standardization of environmental impact assessment of ICT equipment, networks and ICT services based on the Recommendation with the aim to allow companies providing or installing products or ICT services to consider not only performance and prices but also environmental indices, including CO2 emission reductions.</li> <li>(4) Future efforts</li> <li>Continue to promote the development of international standards for telecommunication via the ICT Ecological Guideline Council, in or</li></ul>

	Continue efforts to mitigate and reduce emissions in developing countries and activities
	at international conferences
Japan Franchise	(1) Efforts made in fiscal 2014
Association	<ul> <li>Introduced CO2 refrigerant equipment for 14 stores in Indonesia.</li> </ul>
Japan Foreign Trade	(1) International contribution employing environmental technologies and know-how to
Council, Inc.	solve air and water pollution and other pollution issues
	• For air pollution, conducted afforestation projects (Brazil, New Zealand, Chile, Australia,
	Vietnam), optimized operations of incinerators and boilers by expanding sales of
	continuous monitoring systems of dioxins and PCB and flue gas analyzers, expanded
	sales of diesel exhaust filters
	• For water pollution, developed waste water, recycled water and sewerage treatment
	systems (Mexico, China Czech).
The General Insurance	(1) Efforts made in fiscal 2014
Association of Japan	<ul> <li>Promoted the Zero Accident campaign and the Eco-safety Drive campaign at overseas affiliates and bases</li> </ul>
	Consted used clothes to refugee regions
	Contributed to and participated in launching the Pacific Catastrophe Risk Insurance Pilot
	program jointly established by the World Bank and the Japanese government.
	<ul> <li>Provided weather index-based insurance, which mitigates climate change-induced</li> </ul>
	damages in developing countries, in northeastern Thailand.
	<ul> <li>Planted mangroves in 9 Southeast Asian countries.</li> </ul>
	· Donated profits from products and services contributing to the reduction of
	environmental burden to the Green Belt campaign (afforestation efforts).
	Continuously engaged in tropical forest restoration efforts and provided guidance on
	agricultural technology in Indonesia with an aim to offer a model for creating a
	sustainable society where local residents can coexist with the forest.
	Collaborated with group affiliates in conservation efforts in Ramsar sites.
	• Explained environmental efforts at the Insurance School of Japan (ISJ) and raised
	awareness among international participants.
	(2) Efforts to control and reduce emissions in developing countries
	· Donated money to an NGO engaged in reforestation activities in the Philippines in
	selected
	Planted mangroves in 9 Southeast Asian countries.
	(3) Activities at international conferences
	• Became a signatory to the UNEP FI (United Nations Environment Programme Financial
	Initiative)
	<ul> <li>As a group, became a signatory to the UN Global Compact.</li> </ul>
	Attended COP 11 as chairman of the Keidanren Committee on Nature Conservation.
	• Gave a speech at the Sixth EE+CR seminar held in New York in October 2014.
	In March 2015, co-hosted Third UN World Conference on Disaster Risk Reduction
	(WCDRR) Public Forum events with the Geneva Association and held a keynote session
	and three panel discussions.
	<ul> <li>Participated in a high-level meeting hosted by the UNFCCC Secretariat.</li> </ul>
	• Hosted a side event at the Twelfth Conference of the Parties to the Convention on
	Biological Diversity held in Korea in October 2014 and reported on afforestation efforts
	in Indonesia.
	(4) Future efforts
	- Scheduled to make international contributions in disaster risk reduction through the
	• Acquire approval for new weather index-based insurance in Southeast Asia
Jananoso Pankors	(1) Efforts made in fiscal 2014
Japanese Dankers	• Promoted to the extent possible "support for overseas environmental projects such as
	renewable energy development projects through loans and project finance, etc." and
	"consideration of impacts on the local society and natural environment that may be
	induced by a project, when participating in a project finance scheme".
	(2) Efforts to control and reduce emissions in developing countries

	Enhanced environment business networks by concluding Memorandums of
	Understanding with the purpose of introducing Japanese companies possessing
	environmental technologies to emerging countries, financing environmental projects,
	and providing know-how on emissions trading.
	Purchased World Bank Green Bonds (bonds issued to support projects implemented in
	developing countries for the purpose of preventing global warming).
	(3) Activities at international conferences
	<ul> <li>Signed the UNEP Finance Initiative (UNEP FI)</li> </ul>
	• As a member of the Equator Principles Association Steering Committee, participated in
	the decision-making process of decisions.
	• Signed the Natural Capital Declaration at Rio+20 and participated in WGs that discuss
	ways to incorporate natural capital in products and services, etc.
	• Participated in the the GRI (Global Reporting Initiative) Global Conference as a member
	of the G4 multi-stakeholder committee
	(4) Future efforts
	• 32 banks will "continue current efforts". 16 banks are determined to "make additions to
	and reinforce current efforts." Some banks have listed engagement in "international
	project finance in renewable energy."
Japan Securities	(1) Efforts made in fiscal 2014
Dealers Association	Maintained ISO14001 certification
	Addressed EU ETS issues
	Planted trees in parks
	Cleaned beaches and parks
	(2) Efforts to control and reduce emissions in developing countries
	Supported afforestation and wind power projects in developing countries

Industry	Efforts to promote international contribution
The Scheduled Airlines Association of Japan	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Cooperated with domestic and overseas air traffic control authorities in proactive efforts to introduce advanced aircraft operations with high fuel efficiency</li> <li>(2) Efforts to control and reduce emissions in developing countries</li> <li>Other than reducing fuel consumption by aircrafts, promoted awareness raising among employees working at overseas branches by encouraging low-key emission mitigation and reduction efforts, including recycling and saving electric power.</li> <li>(3) Activities at international conferences</li> <li>Participated in environmental conservation division meetings of international airline</li> </ul>
	<ul> <li>industry organizations, including IATA, ICAO, and AAPA (Association of Asia Pacific Airlines), and made constructive proposals as a representative of East Asia, thus proactively promoting contribution to efforts to counter global warming.</li> <li>(3) International contribution employing environmental technologies and know-how to solve air and water pollution and other pollution issues</li> <li>Ensured promotion of introducing new aircraft models in international flights, which fly over national borders in the airspace of other countries.</li> </ul>
The Japanese Shipowners' Association	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Provided funds for the IMO GHG Study and continued to provide information for studies and research projects for CO2 emission reduction</li> <li>(2) Activities at international conferences</li> <li>Led the world in its first introduction of CO2 emission regulations for international maritime transport. Ships newly constructed in 2013 and beyond are required to meet CO2 emission standards separately determined according to vessel type. Regulations are to be gradually enhanced.</li> <li>Considered measures to reduce GHG emissions from international maritime transport in the IMO. The IMO will continue to collaborate with Japan and other governments in formulating effective reduction measures</li> </ul>

Examples of efforts to develop innovative technologies by participating industries

Industry	Examples of innovative technology development
The Japan Iron and Steel Federation	<ul> <li>(1) Efforts made in fiscal 2014</li> <li>Promoted the CO2 Ultimate Reduction in Steelmaking Process by Innovative Technology for Cool Earth 50 (COURSE50) for iron ore reduction using hydrogen and the sequestration and capture of CO2</li> <li>Promoted the development of an innovative iron-making process that replaces a certain amount of ordinary coke with ferrocoke (an alternative reduction agent to coke that is produced by dry distillation of a molded mixture of low-grade coal and low-grade iron ore) in place of ordinary coke</li> </ul>
Japan Chemical	(1) Efforts made in fiscal 2014
Industry Association	<ul> <li>Developed a inorganic separation membrane that will enable energy savings of more than 50% in the distillation process and conducted demonstration tests at real plants. In the future, the replacement of 13% of the distillation process at chemical plants is estimated to lead to energy savings of approximately 550,000 KL of crude oil equivalent (reductions by 1.46 million t-CO2e).</li> <li>Continued energy carrier projects addressing hydrogen manufacturing, transportation, storage and utilization, based on energy carrier technology (technology that enables transformation into liquid hydrogen and organic ammonia hydrides)</li> <li>Developed fullerene, a nanocarbon material used in next-generation photovoltaic power generation, "organic photovoltaics (OPV)".</li> <li>Continued facilitating the business development of resource-saving crop cultivation systems contributing to increased crop yield and quality and reduced environmental burden</li> <li>Completed joint pilot studies with other companies to manufacture hydrogen from sewerage sludge.</li> <li>Utilized high-purity semiconducting carbon nanotubes (CNT) Achieved world-leading mobility in single-walled carbon nanotube thin film transistors (CNT-TFT). Maximized semiconductor polymers.</li> <li>Jointly developed with other companies non-edible bioplastics made from cellulose. Promoted efforts to develop chemical products made from biomass.</li> <li>Developed carbon fiber material for fuel cell vehicles         <ul> <li>a. Developed carbon fiber reinforced thermo plastics (CFRTP) for automobile parts; b. developed carbon paper for fuel cell stack electrodes; c. developed high-intensity carbon fiber for high-pressure hydrogen tanks</li> </ul> </li> <li>Established manufacturing technologies through the development of carbon fiber recycling technologies for mass production of SiC epitaxial wafers with a diameter of six inches</li> <li>Developed photosensitive heat-resistant resists for use in S</li></ul>
Japan Paper	(1) Efforts made in fiscal 2014
Association	<ul> <li>Successfully manufactured the first transparent continuous sheet of cellulose nano fiber (CNF) as a result of joint research between a member company and a diversified chemical company. Widely promoted CNF development, including the starting of operations at a pilot CNF manufacturing facility and the promotion of developing new applications, including thickeners and packaging at one company; and the provision of samples of various CNF initiated by another company.</li> <li>The local industrialization of nanocellulose led to the establishment of a local working</li> </ul>

1. Industrial Sector

	group seeking to create a local industry. The WG comprises relevant ministries and
	agencies and local governments and
Liaison Group of	(1) Efforts made in fiscal 2014
Japanese Electrical	• Promoted technology development for thermal power plants designed to operate at
and Electronics	higher temperatures [gas turbines and coal gasification] and with higher efficiency by
Industries for Global	combining fuel cells.
Warming Prevention	• Participated in the Floating Offshore Wind Turbine Demonstration Project (Fukushima:
	2MW and 7MW) and promoted efforts towards its commercialization.
	• Promoted the establishment of a high efficiency social system using ICT (e.g. smart
	grids, ITS and BEMS/HEMS), developed a next-generation high efficiency lighting system
	and improved the energy efficiency at data centers
Japan Cement	(1) Efforts made in fiscal 2014
Association	Implemented the Innovative Cement Manufacturing Process Fundamental Technology
	Development project under the initiative of member companies
	• For the establishment of innovative energy-saving technologies that will enhance
	industry-wide competitiveness in the domestic cement industry, conducted joint
	research and development with the participation of 4 member companies on "energy-
	saving clinker production technology," "simulation analysis of clinker production
	processes," and "element technologies for developing clinker production process
	measuring technologies" from fiscal 2010 through fiscal 2014 in order to establish
	innovative fundamental technologies centered on lowering the temperature and
	reducing the amount of time required in the clinker production process, which
	(4) Effective reaction from the total energy required in cement production.
Japan Automobile	(1) Efforts made in fiscal 2014
	model changes
Association /	Trends to even and production lines employing Wet on Wet secting and "het metal"
Japan Auto-Douy	processes
industries Association	(2) Euture offerts
	• Enhance efforts to expand charge stations and hydrogen stations, etc. for the diffusion
	of next-generation vehicles
Japan Mining Industry	(1) Efforts made in fiscal 2014
	• Launched the development of electrolytic copper recycling processes that will enable
A33001011011	significant reductions in electric power consumption. The target is to reduce electric
	nower consumption in the electrolytic refining process from 2 200kWh/t $\rightarrow$ 300kWh/t
	As copper production currently amounts to approximately 10 000t/year 9 000 t-
	CO2/vear of CO2 emissions will be reduced (*)
	(2) Future efforts
	• Continue energy-efficient electrolysis technology development by member companies
	and study ways to use hydrogen energy.
Japan Federation of	(1) Efforts made in fiscal 2014
Construction	• Formulated "Guidelines for biodiesel fuel use in the construction industry" for the
Contractors	industry-wide promotion of biodiesel as an alternative to light oil.
	Promoted the use of official comprehensive environmental assessment indices such as
	CASBEE; and surveyed the status of use among member companies and disclosed
	survey results.
	• Compiled a report on "The status of promotion of environment-friendly design
	(construction) among member companies of the Japan Federation of Construction
	Contractors" and made it available to the public in a press release (February 25, 2015)
	and on the website.
	· Compiled and distributed best practices in building design and construction applying
	element technologies for the decarbonization of buildings and quantitative assessment
	of environmental performance (CASBEE and energy saving performance) in "Best
	Practices of Sustainable Building." In fiscal 2014, added 41 practices, thus providing a
	total of 323 practices.
	(2) Future efforts
	Engage in efforts to disseminate biodiesel as an alternative to light oil.

	<ul> <li>Engage in discussion on the wide promotion of low-carbon concrete.</li> </ul>
	• Develop element technologies for the decarbonization of buildings and promote
	activities to comprehensively and efficiently introduce various state-of-the-art
	technologies in buildings
	Further enhance the "Best Practices of Sustainable Building"
Japan Federation of	(1) Efforts made in fiscal 2014
Housing Organization	Promoted Net Zero Energy Houses (ZEH)
	• Supported and promoted the development of element technologies that will serve to
	of bouring
The Japan Bubber	(1) Efforts made in fiscal 2014
Manufacturers	• Contributed to fuel efficiency improvements by reducing vehicle tire noise and
Association	improving aerodynamic nerformance
7.0000141011	Reduced environmental burden by extending the life of conveyor belts and developing
	recycling technologies
	(2) Future efforts
	• Decarbonize the entire supply chain including the procurement, manufacturing, use
	and disposal phases by developing high-efficiency production processes and facilities,
	and conducting studies on innovative material
	Tires: reduce rolling resistance, run-flat tires, lightweight tires
	Non-tire: develop energy-saving high-performance material, next-generation auto
	parts
	<ul> <li>Apply retreading and other technologies to recycle products and waste</li> </ul>
The Federation of	(1) Efforts made in fiscal 2014
Pharmaceutical	Shortened and optimized the reaction process in order to reduce the amount of raw
Manufacturers'	material, reagents, solvents and energy used
Associations of Japan	Downsized test analysis using organic solvents (liquid chromatography)
The Japan Aluminium	(1) Efforts made in fiscal 2014
Association	Promoted collaboration among industry, academia and government for the application
	or nonzonital aluminum recycling systems in automobile recycling, as such systems
	fluorescent X-rays and lasers have already been applied in sash recycling
	(2) Future efforts
	Continue development of new aluminum recycling processes.
Janan Enderation of	(1) Efforts made in fiscal 2014
Printing Industries	Pursued higher efficiency in printing equipment (introduced high-efficiency motors and
	UV-LED curing light source)
	(2) Future efforts
	Check the status of operations regarding the effective use of waste heat from curing
Flat Glass	(1) Efforts made in fiscal 2014
Manufactures	· Renewed melting furnaces for higher efficiency in heat recovery; consolidated
Association of Japan	production by integrating kilns
	Continued corporate efforts to minimize energy loss by improving combustion
	technologies and combustion equipment. Applied new technologies including the
	partial use of Oxyfuel in burners for melting furnaces at member companies for higher
	combustion efficiency
	(2) Future efforts
	Develop fundamental state-of-the-art technologies including in-flight melting tasks elected that reduce CO2 emissions
Janan Soft Drink	(1) Efforts made in firsal 2014
Association	• Shifted heat sources from "steam" to "methods using electrical heating" (actual
, 5500101011	performance: 33% reduction in CO2 emissions)
	<ul> <li>Introduced a system utilizing the natural "cold heat" of LNG following fuel conversion</li> </ul>
	(projected reductions: 100t of CO2 emissions due to reduced electric power
	consumption in the cooling tower)
Japan Dairy Industry	(1) Efforts made in fiscal 2014

Association	Tested and considered the introduction of technology to operate CIP at lower
	temperatures
	• Conducted field tests on new energy-saving equipment to check effectiveness prior to
	introduction
	(2) Future efforts
	Introduce technologies to operate CIP at lower temperatures
	• Introduce energy-saving equipment once assured of their performance and optimize
	production facilities
The Japanese Electric	(1) Efforts made in fiscal 2014
Wire & Cable Makers'	• Conducted nilot tests on technologies that enable the effective use of electric nower in
Association	superconducting cable systems
Association	• As nichium tin superconducting cables used for superconducting magnets are
	vulnerable to strain, their performance can be lowered when the flow of electricity is impeded. Therefore mitigated performance degradation by developing superconducting magnets made by winding superconducting into a coil which is heat- treated.
The Japan Bearing	(1) Efforts made in fiscal 2014
Industrial Association	• Developed bulbs and pressure reducing valves to supply high-pressure hydrogen to fuel
	cell vehicles (FCV)
	• Developed system products for electric vehicles (EV) using motor control technologies.
	• Developed and introduced bearings for the new series E7 and W7 railcars of the
	Hokuriku Shinkansen, thus contributing to improved energy efficiency.
Japan Petroleum	(1) Future efforts
Development	• Develop technologies related to oil and natural gas development; conduct pilot tests;
Association	and construct and operate manufacturing plants
	• Engage in efforts for the practical application of GTL (Gas to Liquids) and DME (Dimethyl Ether) technologies
	• Conduct research on sustainable carbon circulation using methane production
	technologies
Janan Association of	(1) Efforts made in fiscal 2014
Rolling Stock	• In May 2013 sold SiC (silicon carbide) -SBD (Schottky barrier dioide) nower
Industries	semiconductor modules for household appliances, industrial equipment, and railcar
	devices. In fiscal 2014, major private railway companies in the Kanto area renewing
	rolling stock adopted VVVF inverter devices with full Sic (Silicon Carbide) suitable for
	use in a DC1500V electrification system, therefore succeeding in the world's first
	practical application of an inverter for rolling stock employing a large-capacity 3.3kV
	power module rated at 1500A using only SiC.
	(2) Future efforts
	Further disseminated hybrid railcars and fuel cell-driven railcars
	Provide inverters using SiC power modules for railcars to railroad companies
	• Seek commercialization in the next five years by optimizing the entire main circuit
	system to achieve a smaller lighter and more energy-efficient system

# 2. Energy Conversion Section

Industry	Examples of innovative technology development
The Federation of	(1) Future efforts
Electric Power Companies	<ul> <li>Engage in technology development from the viewpoint of stable supply of electric power in the long term, the establishment of a nuclear fuel cycle will serve the purpose of effectively using energy resources and reduce environmental burden by reducing nuclear waste volumes.</li> <li>Develop IGCC (integrated coal gasification combined cycle), which promises higher power generation efficiency and a wider choice of coal types compared to conventional coal-fired thermal power generation.</li> <li>Proactively cooperate in large-scale pilot test led by the government an promote CCS-</li> </ul>
	related technology development. By investing in Japan CCS CO., Ltd., which conducts

	feasibility studies and pilot tests, continue to cooperate in the government-led large-
	scale pilot test (CO2 Reduction Technology Demonstration Project).
	• Promoted research and development for the establishment of next-generation power
	transmission and distribution networks, such as the smart grid, with government
	cooperation in assessing the impacts the large-scale introduction of solar power would
	have on the entire grid and verifying measures to stabilize the grid system.
	• Promoted research and development for efficiency improvements in heat pump water
	heaters using CO2 refrigerants (Eco Cute)
	• Conducted other measures for efficiency improvements and the downsizing of heat
	pump technologies and heat and electric power storage technologies
	• Engaged in efforts to improve the user-friendliness of electric vehicles by performing
	test runs, developing chargers, and domestically and internationally standardizing fast
	chargers; and promoted the introduction of electric vehicles and plug-in hybrid vehicles
	in corporate fleets for business use.
Petroleum Association	(1) Efforts made in fiscal 2014
of Japan	• Promoted the development of Petroleomics technology, for the advanced use of heavy
	oil and applied the elemental technologies gained in improving existing equipment (e.g.
	analysis of the behavior of asphaletene which can cause the process to become stuck
	or reduce catalytic performance)
The Japan Gas	(1) Efforts made in fiscal 2014
Association	• Developed a compact and low-cost hydrogen generation unit (HYSERVE=300) with
	world-leading high efficiency to supply large amounts of hydrogen at hydrogen stations
	• Developed gas-engine cogeneration systems to efficiently recover heated waste water
	from gas engines as steam.
	Developed a gas cogeneration system that efficiently recovers warm waste water from
	the gas engine as steam
	• Developed "Ene-farm," a residential fuel cell unit that has a new "grid-independent
	mode" capable of generating electricity even during power outages and supply power
	to household through a special outlet for use during power outages
	• Developed a new "Ene-farm" residential fuel cell model for single-family homes by
	simplifying the system to reduce the number of parts assembled by 15% compared to
	conventional models, and thus reduce cost.
	• In the development of a 250kW Solid Oxide Fuel Cell (SOFC)-Micro Gas Turbine. (MGT)
	hybrid system, conducted test runs using improved SOFC cells and acknowledged that
	higher output could be gained compared to conventional systems.
	(2) Future efforts
	Achieve efficiency improvements and cost reduction in cogeneration and fuel cells

### 3. Commercial Sector

Industry	Examples of innovative technology development
Telecommunications	(1) Efforts made in fiscal 2014
Carriers Association	<ul> <li>Realized the world's first over-100-bit optical random access memory (RAM) by integrating ultrasmall optical memories based on photonic crystal nanocavities. This technology gives hope for the development of high-speed ICT and low energy consumption technologies.</li> <li>Developed a high-voltage direct current (HVDC) electric power - feeding system. Compiled and published "Technical Requirements for High-voltage DC Power Feeding Interfaces of ICT equipment (TR)."</li> </ul>
	(2) Future efforts
	• Promote the development of technologies to save the electric power used by
	telecommunications equipment and ACHV facilities with an aim to reduce electricity consumption in telecommunication networks as a whole. Promote research on high- speed high-capacity technologies and high-efficiency operation technologies by

	converting to innovative fiber optics for further energy savings
	• Promote the development of cloud technologies and high-efficiency technologies to
	feed power into telecommunications equipment with an aim to save energy at data
	centers and in telecommunications buildings
	<ul> <li>Enhance the promotion to spread solid oxide fuel cells</li> </ul>
	Contribute to the formulating the "best energy mix" by engaging in natural energy-
	based power generation, not limited to solar power but also including biomass and
	geothermal energy, for the stable supply of electric power
The General Insurance	(1) Efforts made in fiscal 2014
Association of Japan	Sold pay-per-mile automobile insurance and contributed to the promotion of safe
	driving and reduced car accidents by utilizing Telematics (system that provides services
	and information by employing car navigation and GPS systems installed in cars and
	wireless telecommunication systems), thus reducing environmental burden.
	<ul> <li>Led the industry in developing and disseminating web-based insurance clauses</li> </ul>
Japan LP Gas	(1) Efforts made in fiscal 2014
Association	Supported the development of CCS (Carbon dioxide Capture and Storage) technologies
	by investing in a research firm specializing in CCS
The Real Estate	(1) Efforts made in fiscal 2014
Companies	<ul> <li>Adopted district heating</li> </ul>
Association of Japan	<ul> <li>Interchanged energy among buildings</li> </ul>
	<ul> <li>Introduced renewable energy</li> </ul>
	<ul> <li>Shared information among buildings; held meetings on saving energy</li> </ul>
	<ul> <li>Addressed heat island issues by greening a wide area</li> </ul>
Japan Securities Dealer	(1) Efforts made in fiscal 2014
Association	<ul> <li>Promoted the development and sales of funds linked with global warming</li> </ul>
	countermeasures and environmental protection as a way from the Securities Industry
	to contribute to CO2 emission reductions
	(2) Future efforts
	• Each company will continue to pursue existing efforts and consider new undertakings
	as required.

Industry	Examples of innovative technology development					
The Japanese	(1) Efforts made in fiscal 2014					
Shipowners'	Cooperated with the shipbuilding / marine industry in developing innovative					
Association	technologies including LNG-fueled ships					
The Scheduled Airlines	(1) Efforts made in fiscal 2014					
Association of Japan	Continuously renewed aircrafts to new models in accordance with their development					
	by aircraft manufacturers					
	<ul> <li>Conducted pilot tests to operate aircrafts on next-generation bio-jet fuel</li> </ul>					
	(2) Future efforts					
	<ul> <li>Continue to reduce CO2 emission intensity by gradually renewing aircrafts to new models</li> </ul>					
	Proactively participate in working groups for committees under the Ministry of					
	Economy, Trade and Industry and the Ministry of Land, Transport and Infrastructure on					
	the introduction of bio-jet fuels.					
The Association of	(1) Future efforts					
Japanese Private	Introduce electric power storage equipment that can change the kinetic energy of a car					
Railways	into electric power and temporarily store it.					

### Efforts made by participating industries beyond the four pillars

### 1. Industrial Sector

Industry	Efforts made by participating industries beyond the four pillars
Japan Chemical Industry Association	Reduced emissions of the four fluorocarbon alternatives by 20 million tons from 1995     levels
Japan Paper	<ul> <li>Engaged in management and reduction efforts in accordance with corporate status</li> </ul>
Association	
Japan Cement	<ul> <li>Destroyed fluorocarbons at some cement plants</li> </ul>
Association	
Liaison Group of	Promoted international inter-industry cooperation in the semiconductor and liquid
Japanese Electrical	crystal areas at the World Semiconductor Council (WSC) and the World LCD Industry
and Electronics	Cooperation Committee (WLICC)
Industries for Global	Achieved the target of controlling SF6 emissions "within 3% of net purchased volume
Warming Prevention	of gas by 2005" through efforts to prevent leakage and improve recovery of electric insulation gas SF6 in accordance with JEMA's voluntary action plan
Japan Federation of	Used specialized companies to recover and destroy fluorocarbons
Construction	
Contractors	
Japan Automobile	Set the 2020 target GWP value at 850 for passenger vehicles and formulated a
Manufacturers	voluntary action plan which promoted the development and early introduction of air
Association, Inc.	conditioning systems using new refrigerants. Also continued to prevent leaks when
Japan Auto-Body	filling vehicles with gas.
Industries Association,	
Inc.	
Japan Federation of	<ul> <li>Promoted the proper treatment of fluorocarbons</li> </ul>
Housing Organizations	
Lime Manufacture	<ul> <li>Decomposed fluorocarbons in lime burning furnaces</li> </ul>
Association	
The Japan Rubber	<ul> <li>Prevented SF6 emissions and promoted the use of alternative gases for PFC and SF6</li> </ul>
Manufacturers	
Association	. Cientificantia and and the case of UECe in initial states are said
The Federation of	• Significantly reduced the use of HFCs in inhalation aerosols
Manufacturors'	
Associations of Japan	
Janan Federation of	Continued checklins for HEC and PEC gas leaks and maintenance. Properly treated gases
Printing Industries	no longer required nursuant to relevant laws
Trinting industries	Continued checkups for dielectric gas SE6 gas leaks and maintenance
Brewers Association of	Shifted to operations using non-fluorocarbon refrigerants (already achieved at 2 plants)
Japan	
The Japanese Electric	• Made efforts to prevent leakage and promote the recovery and reuse of SF6 and HFC
Wire & Cable Makers'	in equipment checkups and repairs
Association	all barren and an and an and an
Japan Dairy Industry	Renewed equipment using fluorocarbons to non-fluorocarbon equipment.
Association	Set up organizational systems to perform maintenance and recordings of fluorocarbon
	leakings
Japan Sanitary	Gradually replaced 5.5 gases with fluorocarbon alternatives and non-fluorocarbon
Equipment Industry	gases
Association	<ul> <li>Promoted the use of high-efficiency gases in gas heat pumps and kilns. Initiated</li> </ul>
	measurements of methane and N2O emitted during incineration.

Japan Soft Drink	Adopted ammonia freezers and maintained stable operations				
Association	Continued the deployment of non-fluorocarbon heat-pump vending machines				
	Appropriately recovered and destroyed the fluorocarbons used in vending machines				
The Shipbuilders'	Continued not to use alternative fluorocarbons; properly treated fluorocarbons from air				
Association of Japan /	conditioners.				
The Cooperative	<ul> <li>Encouraged shifts to alternative fluorocarbons</li> </ul>				
Association of Japan	Adopted low-VOC coating				
Shipbuilders					
Japan Association of	Prevented fluorocarbon leakages when performing regular checkups of equipment				
Rolling Stock	using specified fluorocarbons required by law.				
Industries	Performed proper treatment of alternative fluorocarbons.				
	<ul> <li>Ensures the performance of simplified check-ups of air conditioning and</li> </ul>				
	freezing/refrigerating equipment and regular check-ups; established operational rules.				
Japan Petroleum	<ul> <li>Installed recovery equipment at tank truck shipping facilities</li> </ul>				
Development	<ul> <li>Optimized crude oil storage tank operation procedures.</li> </ul>				
Association					

### 2. Energy Conversion Sector

Industry	Efforts made by participating industries beyond the four pillars				
muustry	<efforts emissions="" non-co2="" reduce="" to=""></efforts>				
The Federation of	• Formulated the Voluntary Action Plan for the Reduction of SF6 Emissions from Electric				
Electric Power	Power Business (April 1998) to reduce emission and recycle SF6 used in gas insulation				
Companies	equipment, etc.; and made efforts to reduce emissions.				
	• To address refrigerants used in in air conditioning equipment, engaged in efforts to				
	installing and repairing equipment which are used as				
	<ul> <li>Estimated N2O emissions from fuel combustion at thermal power plants to be 3% of total N2O emissions in Japan. Made every effort to reduce emissions by improving power generation efficiency.</li> </ul>				
The Petroleum	<ul> <li>Engaged in efforts to reduce N2O emissions by improving combustion efficiency.</li> </ul>				
Association of Japan					
The Japan Gas	· Promoted the diffusion of gas absorption water coolers/heaters that do not emit				
Association	fluorocarbons.				

#### 3. Commercial Sector

Industry.	Efforts made by participating industries beyond the four pillars					
muustry	<efforts emissions="" non-co2="" reduce="" to=""></efforts>					
Japan Chain Stores	Controlled HFC emissions by taking measures to prevent leakage of refrigerants when					
Association	manufacturers and companies specializing in fluorocarbon recovery.					
Ensured the recovery of refrigerant when disposing equipment using HFC refr						
Japan LP Gas	Controlled CH4 and N2O emissions by installing floating roof tanks for volatile oil.					
Association	<ul> <li>Controlled NOx emissions by managing boilers and heating furnaces</li> </ul>					
The Real Estate	Properly treated fluorocarbon refrigerants and thermal insulation material using					
Companies	fluorocarbons.					
Association of Japan						
Japan Foreign Trade	Conducted commercial recycling of fluorocarbon refrigerant gases					
Council, Inc.	<ul> <li>Promoted sales of carbohydrate refrigerants to replace fluorocarbons.</li> </ul>					

Industry	Efforts made by participating industries beyond the four pillars		
	<efforts emissions="" non-co2="" reduce="" to=""></efforts>		

Japan Federation of	· Engaged in efforts to adopt refrigerants with small global warming impact and to
Coastal Shipping	prevent leakage of fluorocarbon refrigerants (used in air conditioning equipment and
Associations	freezers on ships).
	<ul> <li>Complied with domestic laws adopted based on IMO provisions</li> </ul>
The Association of	As some train car control equipment and air conditioning equipment still use
Japanese Private	fluorocarbon refrigerants, replaced them with devices using water-based heat pipes
Railways	when introducing new train car models. Also renewed equipment used in existing cars
	to non-fluorocarbon refrigerants.
	Promoted the adoption of heat pipes not using GHGs in cooling equipment for electric
	devices at substations

	Energy consumption per unit of floor area $[1/m^2]$			
Industry				Relative to precious
	FY2012	FY2013	FY2014	year
Japan Iron and Steel Federation	30.8	30.0	28.6	-4.7%
Japan Paper Association	23.8	24.3	23.3	-4.2%
Japan Cement Association	_	—	18.7	_
Lime Manufacture Association	26.4	25.2	23.5	-6.6%
The Federation of Pharmaceutical Manufacturers' Associations of Japan	31.9	31.8	30.9	-2.6%
Japan Aluminum Association	24.8	24.4	24.6	0.7%
Japan Soft Drink Association	38.2	37.6	37.7	0.1%
Japan Dairy Industry Association	52.6	50.4	41.2	-18.2%
The Japanese Electric Wire & Cable Makers' Association	29.4	27.6	28.1	1.7%
The Japan Bearing Industrial Association (fixed coefficient *1)	25.8	24.9	22.9	-7.9%
Japan Petroleum Development Association	36.0	38.9	37.0	-5.0%
Japan Copper and Brass Association	23.8	23.6	24.7	4.7%
The Shipbuilders' Association of Japan and the Cooperative Association of Japan Shipbuilders	51.3	32.9	31.0	-5.8%
Limestone Association of Japan	34.5	33.0	32.4	-1.7%
Flour Millers Association	30.0	30.1	26.1	-13.6%
Japan Association of Rolling Stock Industries	30.6	29.5	28.9	-2.3%
The Japan Gas Association	45.9	44.4	38.9	-12.5%
The Association of Japanese Private Railways	40.4	37.7	36.0	-4.4%

Results of efforts made in head and local offices in non-commercial industries

\*1 CO2 emission coefficient of electricity=3.05[t-CO2/10000kWh]

Inductor	Energy consumption per unit of volume transported [1/t-km]				
muustry					
				Relative to	
	FY2012	FY2013	FY2014	previous year	
The Japan Iron and Steel Federation	0.0157	0.0155	0.0155	-0.1%

### Results of Logistics-related Efforts in non-Transportation Industries

### [Attachment 9]

#### Members of the Evaluation Committee for

#### Keidanren's Commitment to a Low Carbon Society

as of March 15, 2016

Committee Chair

Dr. Yoji Uchiyama (Professor Emeritus, University of Tsukuba)

Members

Dr. Tadashi Aoyagi (Director and Technical Advisor, Universal Energy Institute, Inc.)

Ms. Kiyoe Asada (Member, Women's Energy Network (WEN) / consumer life advisor

Mr. Michio Ushioda (Guest Editor, The Mainichi Newspapers)

Mr. Kazuya Kojitani (Executive Director and Secretary General, Green Purchasing Network)

Ms. Yuko Sakita (Journalist and Environmental Counselor)

Mr. Nobuyuki Shintani (Assistant General Secretary, Japanese Trade Union Confederation)

Mr. Ikufumi Niimi (Professor, School of Law, Meiji University)

Dr. Ryuji Matsuhashi (Professor, Graduate School of Engineering, The University of Tokyo)

Dr. Kanji Yoshioka (Professor Emeritus, Keio University)
